ASUTATUD, PEATATUD JA LÕPETATUD KOMITEED

EVS/TK 57 „Põlevkivi ja põlevkiviproaktide töötlemine“ asutamine

Komitee tähis: EVS/TK 57

Komitee pealkiri: Põlevkivi ja põlevkiviproaktide töötlemine

Käsitlusala: Põlevkivi kaevandamine ja töötlemise tehnoloogia, põlevkiviõli tootmine ja põlevkivikeemia, põlevkivienergeetika. Aheraine ja jäärakud töötlemine.

Esimees: Hella Riisalu

Sekretär: Anu Nuut

EVS koordinaator Liis Tambek (liis@evs.ee)

UUED STANDARDID JA STANDARDILAADSED DOKUMENDID

Igakuiselt uuendatav teave eestikeelsena avaldatavate Eesti standardite kohta, sh eeldatavad kommenteerimise ja avaldamise tähtpäevad, on leitav Standardikeskuse veebilehel avaldatavast [standardimisprogrammist](#).

CEN ISO/TR 17424:2015

Intelligent transport systems - Cooperative systems - State of the art of Local Dynamic Maps concepts (ISO/TR 17424:2015)

TR 17424 deliver information about the current status of the Local Dynamic Map (LDM) concepts as they have been developed in the different R&D projects in Europe, Japan and the USA. It presents different architectures, implementations, LDM functional blocks and the related standardization activities. TR 17424 proposes actions for future standardization activities and harmonization needs. – Definition of the LDM (based on EU projects SAFESPOT, CVIS, and COMeSafety) – Thesis: The LDM is a subsystem located within an ITS station. – A LDM typical consists of several elements or functions: o LDM management including synchronization and update o LDM data storage o LDM security o LDM content integrity o LDM policy advisor (privacy) o LDM arbiter / screening, prioritizing o LDM SAPs / data access o LDM broker (shared data management) The draft TR is ready for DTR comment ballot submission.

CEN/TS 14014:2015

Postal services - Hybrid mail - XML definition of encapsulation of letters for automated postal handling

The purpose of this Technical Specification is to define the syntax rules for a data stream for the submission of printing data to a Hybrid Mail operator or between Hybrid Mail operators. The Technical Specification defines a XML Schema Definition (XSD) describing the data stream. The description is based upon the XML (eXtended Mark-up Language) definition of rules and semantics for defining an XSD. The purpose of this is to offer a generalised syntax description that can provide seamless integration with a number of existing applications generating data that is liable to be forwarded to or from a Hybrid Mail operator. The use of an XSD will ensure that the documents conform to the standard defined and that the output has the correct syntax. Software manufacturers can use an XSD to program applications that will produce correct outputs. This Technical Specification defines the syntax for creating a data stream that will eventually be converted into a deliverable. The overall object (a batch) can be divided into one or more objects that again can be divided into objects. The hierarchy includes bundles that contain a common part and letters. Each object has a number of characteristics attached to it. This diagram shows the structure of a HML (Hybrid Mail Language) document: each letter is self-contained (contains all the necessary information to be delivered on a certain destination). Each letter can have one contact. Each contact can have multiple alternatives for delivery. This Technical

Specification does not define the specific services offered by local operators (Hybrid Mail operators). This Technical Specification does not define the communication method used. It does only define the format of Hybrid Mail as such.

EVS-EN 16247-5:2015

Energy audits - Part 5: Competence of energy auditors

This European Standard specifies the competence requirements of the energy auditor. This European Standard can be used to specify energy auditor qualification schemes at a national level; used by organizations undertaking energy audits to appoint a suitably competent energy auditor and used by organizations, in conjunction with EN 16247-1, EN 16247-2, EN 16247-3 and EN 16247-4, to ensure a good level of quality of the energy audits. This European Standard also recognizes that all the competence required can reside in the energy auditor or a team of energy auditors.

CEN ISO/TS 12025:2015

Nanomaterials - Quantification of nano-object release from powders by generation of aerosols (ISO/TS 12025:2012)

This Technical Specification provides methodology for the quantification of nano-object release from powders as a result of treatment, ranging from handling to high energy dispersion, by measuring aerosols liberated after a defined aerosolization procedure. In addition to information in terms of mass, the aerosol is characterized for particle concentrations and size distributions. This Technical Specification provides information on factors to be considered when selecting from the available methods for powder sampling and treatment procedures and specifies minimum requirements for test sample preparation, test protocol development, measuring particle release and reporting data. In order to characterize the full size range of particles generated, the measurement of nano-objects as well as agglomerates and aggregates is recommended in this Technical Specification. This Technical Specification does not include the characterization of particle sizes within the powder. Tribological methods are excluded where direct mechanical friction is applied to grind or abrade the material.

CEN ISO/TS 17200:2015

Nanotechnology - Nanoparticles in powder form - Characteristics and measurements (ISO/TS 17200:2013)

This Technical Specification lists fundamental characteristics which are commonly determined for nanoparticles in powder form. The Technical Specification prescribes specific measurement methods for each of these characteristics. This Technical Specification does not specify acceptable quantitative criteria for the characteristics because they are subject to agreement between sellers, buyers, and regulators. Excluded in this Technical Specification are characteristics specifically related to health, safety, and environmental issues, as well as characteristics that pertain to specific applications of nanoparticles in powder form.

11 TERVISEHOOLDUS

EVS-EN 45502-1:2015

Implants for surgery - Active implantable medical devices - Part 1: General requirements for safety, marking and for information to be provided by the manufacturer

This Part 1 of EN 45502 specifies requirements that are generally applicable to ACTIVE IMPLANTABLE MEDICAL DEVICES. NOTE 1 For particular types of ACTIVE IMPLANTABLE MEDICAL DEVICES, these general requirements are supplemented or modified by the requirements of particular standards which form additional parts of this European Standard. The tests that are specified in EN 45502 are type tests and are to be carried out on samples of an ACTIVE IMPLANTABLE MEDICAL DEVICE to show compliance. This Part 1 of EN 45502 is applicable not only to ACTIVE IMPLANTABLE MEDICAL DEVICES that are electrically powered but also to those powered by other energy sources (for example by gas pressure or by springs). This Part 1 of EN 45502 is also applicable to some non-implantable parts and accessories of the ACTIVE IMPLANTABLE MEDICAL DEVICES. NOTE 2 The terminology used in this European Standard is intended to be consistent with the terminology of Directive 90/385/EEC. NOTE 3 In this European Standard, terms printed in small capital letters are used as defined in Clause 3. Where a

defined term is used as a qualifier in another term, it is not printed in small capital letters unless the concept thus qualified is also defined.

Ühekordselt kasutatavad meditsiinilised kindad. Osa 2: Nõuded füüsikalistele omadustele ja katsetamine

Medical gloves for single use - Part 2: Requirements and testing for physical properties

This European Standard specifies requirements and gives test methods for physical properties of single-use medical gloves (i.e. surgical gloves and examination/procedure gloves) in order to ensure that they provide and maintain in use an adequate level of protection from cross contamination for both patient and user. This European Standard does not specify the size of a lot. Attention is drawn to the difficulties that can be associated with the distribution and control of very large lots. The recommended maximum individual lot size for production is 500 000.

Elektrilised meditsiiniseadmed. Osa 1-11: Üldised nõuded esmasele ohutusele ja olulistele toimimisnäitajatele. Kollateraalstandard: Nõuded koduses ravikeskkonnas kasutatavatele elektrilistele meditsiiniseadmetele ja -süsteemidele

Medical electrical equipment - Part 1-11: General requirements for basic safety and essential performance - Collateral Standard: Requirements for medical electrical equipment and medical electrical systems used in the home healthcare environment

IEC 60601-1-11:2015 applies to the basic safety and essential performance of medical electrical equipment and medical electrical systems for use in the home healthcare environment. It applies regardless of whether the medical electrical equipment or medical electrical system is intended for use by a lay operator or by trained healthcare personnel. The home healthcare environment includes: - the dwelling place in which a patient lives; - other places where patients are present both indoors and outdoors, excluding professional healthcare facility environments where operators with medical training are continually available when patients are present. This second edition cancels and replaces the first edition of IEC 60601-1-11, published in 2010, and constitutes a technical revision. The most significant changes with respect to the previous edition include the following modifications: - correction of test method for relative humidity control at temperatures above 35 °C; - redrafting of subclauses that altered instead of adding to the general standard or other collateral standards; and - harmonizing with the changes to the amendments to the general standard and other collateral standards.

Medical electrical equipment - Part 1-12: General requirements for basic safety and essential performance - Collateral standard: Requirements for medical electrical equipment and medical electrical systems intended for use in the emergency medical services environment

IEC 60601-1-12:2014 constitutes a collateral standard to IEC 60601-1: Medical electrical equipment - Part 1: General requirements for basic safety and essential performance hereafter referred to as the general standard. Medical practice is increasingly using medical electrical equipment and medical electrical systems for monitoring, treatment or diagnosis of patients in the emergency medical services environment. The safety of medical electrical equipment in this uncontrolled, rough environment is a cause for concern. This collateral standard was developed with contributions from clinicians, engineers and regulators. The terminology, requirements, general recommendations and guidance of this collateral standard are intended to be

useful for manufacturers of medical electrical equipment and medical electrical systems and for technical committees responsible for the development of particular standards. This International Standard applies to the basic safety and essential performance of medical electrical equipment and medical electrical systems, hereafter referred to as ME equipment and ME systems, which are intended, as indicated in the instructions for use by their manufacturer, for use in the EMS environment (Emergency Medical Services environment). The object of this collateral standard is to provide general requirements for ME equipment and ME systems carried to the scene of an emergency and used there, as well as in transport, in situations where the ambient conditions differ from indoor conditions. The object of this collateral standard is to specify general requirements that are in addition to those of the general standard and to serve as the basis for particular standards.

Medical electrical equipment - Part 2-10: Particular requirements for the basic safety and essential performance of nerve and muscle stimulators

This International Standard specifies the requirements for the safety of nerve and muscle STIMULATORS, defined in subclause 201.3.204, for use in the practice of physical medicine, hereinafter referred to as ME EQUIPMENT. This includes transcutaneous electrical nerve STIMULATORS (TENS) and electrical muscle STIMULATORS (EMS). NOTE A muscle STIMULATOR may also be known as a neuromuscular STIMULATOR. The following ME EQUIPMENT is excluded: - ME EQUIPMENT intended to be implanted or to be connected to implanted electrodes; - ME EQUIPMENT intended for the stimulation of the brain (e.g. electroconvulsive therapy ME EQUIPMENT); - ME EQUIPMENT intended for neurological research; - external cardiac pacemakers (see IEC 60601-2-31); - ME EQUIPMENT intended for averaged evoked potential diagnosis (see IEC 60601-2-40); - ME EQUIPMENT intended for electromyography (see IEC 60601-2-40); - ME EQUIPMENT intended for cardiac defibrillation (see IEC 60601-2-4).

Elektrilised meditsiiniseadmed. Osa 2-11: Erinõuded gammakiiritusraviseadmete esmasele ohutusele ja olulistele toimimisnäitajatele

Medical electrical equipment - Part 2-11: Particular requirements for the basic safety and essential performance of gamma beam therapy equipment

IEC 60601-2-11:2013 applies to the basic safety and essential performance of gamma beam therapy equipment, including multi-source stereotactic radiotherapy equipment. This particular standard of the 60601 series, establishes requirements to be complied with by manufacturers in the design and construction of gamma beam therapy equipment. It states tolerance limits beyond which interlocks must prevent, interrupt or terminate irradiation in order to avoid an unsafe condition. Type tests which are performed by the manufacturer, or site tests, which are not necessarily performed by the manufacturer, are specified for each requirement. It does not attempt to define the optimum performance requirements for a gamma beam therapy equipment for use in radiotherapy.

Its purpose is to identify those features of design which are regarded at the present time as essential for the safe operation of such equipment. It places limits on the degradation of equipment performance at which it can be presumed that a fault condition applies, e.g. a component failure, and where an interlock then operates to prevent continued operation. This third edition cancels and replaces the second edition of IEC 60601-2-11 published in 1997 and its Amendment 1:2004. This edition constitutes a technical revision which brings this standard in line with the third edition of IEC 60601-1 and its collateral standards.

Medical electrical equipment - Part 2-24: Particular requirements for the basic safety and essential performance of infusion pumps and controllers

IEC 60601-2-24:2012 applies to the basic safety and essential performance of infusion pumps and volumetric infusion controllers. This standard applies to administration sets insofar as their characteristics influence the basic safety or essential performance of infusion pumps and volumetric infusion controllers. However this standard does not specify requirements or tests for other aspects of administration sets. This particular standard specifies the requirements for enteral nutrition pumps, infusion pumps, infusion pumps for ambulatory use, syringe or container pumps, volumetric infusion controllers and volumetric infusion pumps. This particular standard does not apply to the following: devices specifically intended for diagnostic or similar use; devices for extracorporeal circulation of blood; implantable devices; equipment specifically intended for diagnostic use within urodynamics; equipment specifically intended for diagnostic use within male impotence testing; and devices covered by ISO 28620. This second edition cancels and replaces the first edition of IEC 60601-2-24. This edition constitutes a technical revision according to IEC 60601-1:2005+A1:2012 with new clause numbering, including usability and alarms.

Medical electrical equipment - Part 2-36: Particular requirements for the basic safety and essential performance of equipment for extracorporeally induced lithotripsy

IEC 60601-2-36:2014 applies to basic safety and essential performance of equipment for extracorporeally induced lithotripsy including equipment for other medical applications of therapeutic extracorporeally induced focused pressure pulses. The applicability of this particular standard is limited to components directly involved in the lithotripsy treatment, such as, but not limited to, the generator of the pressure pulse, patient support device, and their interactions with imaging and monitoring devices. Other devices, such as patient treatment planning computers, X-ray and ultrasonic devices, are excluded from this standard, because they are treated in other applicable IEC standards. This particular standard does not apply to ultrasound physiotherapy equipment intended to be used for physiotherapy; abd to ultrasound equipment intended to be used for high intensity therapeutic ultrasound (HITU) and other therapy equipment as described in Annex AA. This second edition cancels and replaces the first edition of IEC 60601-2-36 published in 1997. This edition constitutes a technical revision to align structurally with IEC 60601-1:2005 and its Amendment1:2012.

EVS-EN 60601-2-47:2015

Elektrilised meditsiiniseadmed. Osa 2-47: Erinõuded ambulatoorsele elektrokardiograafiasüsteemide esmasele ohutusele ja olulistele toimimisnäitajatele
Medical electrical equipment - Part 2-47: Particular requirements for the basic safety and essential performance of ambulatory electrocardiographic systems

IEC 60601-2-47:2012 concerns the basic safety and essential performance of AMBULATORY ELECTROCARDIOGRAPHIC SYSTEMS. It amends and supplements the general standard IEC 60601-1 (third edition 2005). The requirements of this particular standard take priority over those of the general standard. Within the scope of this standard are systems of the following types: a) systems that provide continuous recording and continuous analysis of the ECG allowing full re-analysis giving essentially similar results. b) systems that provide continuous analysis and only partial or limited recording not allowing a full re-analysis of the ECG. The safety aspects of this standard apply to all types of systems falling in one of the above- mentioned categories. If the AMBULATORY ELECTROCARDIOGRAPHIC SYSTEM offers automatic ECG analysis, minimal performance requirements for measurement and analysis functions apply. MEDICAL ELECTRICAL EQUIPMENT covered by IEC 60601-2-25 and IEC 60601-2-27 are excluded from the scope of this standard. This standard does not apply to systems that do not continuously record and analyse the ECG (for example, 'intermittent event recorders'). This second edition cancels and replaces the first edition published in 2001. It constitutes a technical revision. This edition was revised to align structurally with the 2005 edition of IEC 60601-1.

Medical electrical equipment - Part 2-52: Particular requirements for the basic safety and essential performance of medical beds

IEC 60601-2-52:2009 applies to the basic safety and essential performance of medical beds intended for adults. This first edition cancels and replaces the first edition of IEC 60601-2-38, published in 1996, and its Amendment 1 (1999). This edition constitutes a technical revision. IEC 60601-2-52:2009 is the realization of much work in alignment, and scope adjustment between IEC 60601-2-38, EN 1970, and the third edition of IEC 60601-1.

Medical electrical equipment - Part 2-62: Particular requirements for the basic safety and essential performance of high intensity therapeutic ultrasound (HITU) equipment

IEC 60601-2-62:2013 applies to the basic safety and essential performance of HIGH INTENSITY THERAPEUTIC ULTRASOUND EQUIPMENT. This International Standard adds or replaces clauses listed in the IEC 60601-1 that are specific for HIGH INTENSITY THERAPEUTIC ULTRASOUND EQUIPMENT. If a clause or subclause is specifically intended to be applicable to such equipment only, or to related systems only, the title and content of that clause or subclause will say so. If that is not the case, the clause or subclause applies both to individual equipment and to systems, as relevant. Hazards inherent in the intended physiological function of the equipment or systems within the scope of this standard are not covered by specific requirements in this standard except in 7.2.13 and 8.4.1 of the general standard. This standard can also be applied to - therapeutic equipment for thrombolysis through exposure to high-intensity therapeutic ultrasound; - therapeutic equipment for the treatment of occluding feeding vessels through exposure to high-intensity focused ultrasound; - and equipment intended to be used for relieving cancer pain due to bone metastases. This particular standard does not apply to - Ultrasound Equipment intended to be used for physiotherapy (use IEC 60601-2-5 and IEC 61689); - Ultrasound Equipment intended to be used for lithotripsy (use IEC 60601-2-36); - Ultrasound Equipment intended to be used for dedicated hyperthermia devices; and - Ultrasound Equipment intended to be used for phacoemulsification.

Diagnostilised röntgenpildiseadmed. Üldotstarbeliste ja mammograafiliste hajukiirtevõrede karakteristikud

Diagnostic X-ray imaging equipment - Characteristics of general purpose and mammographic anti-scatter grids

This International Standard deals with the definitions, determination and indication of characteristics of ANTI-SCATTER GRIDS used in diagnostic X-ray imaging equipment, in order to reduce the incidence of SCATTERED RADIATION, produced particularly in the body of the PATIENT, upon the IMAGE RECEPTION AREA and thus to improve the contrast of the X-RAY PATTERN. In this standard only LINEAR GRIDS are considered. Since at present only FOCUSED GRIDS are used in mammography, this standard is restricted to FOCUSED GRIDS for MAMMOGRAPHIC ANTI-SCATTER GRIDS. This standard is not intended to be applied for ACCEPTANCE TESTS. This standard does not cover the homogeneity of performance over the area of a grid. This standard is intended to be applied for the demonstration of the characteristics of ANTI SCATTER GRIDS under test conditions. These conditions are not usually available at the site of the RESPONSIBLE ORGANIZATION.

Meditsiiniseadmete ja muude toodete markeerimise standardreeglid nende ohutuse suhtes magnetresonantsi keskkonnas

Standard practice for marking medical devices and other items for safety in the magnetic resonance environment

IEC 62570:2014 applies to the practice of marking of items that might be used in the magnetic resonance (MR) environment. The purpose of this practice is to mark items that might be brought into the MR environment and to recommend information that should be included in the marking. The standard specifies the permanent marking of items, which are used in an MR environment, by means of terms and icons. MR image artifacts are not considered to be a performance issue and so are not addressed in this international standard practice. IEC 62570 is integrating the unmodified text of ASTM F2503-13. It has been developed by subcommittee 62B: Diagnostic imaging equipment, of IEC technical committee 62: Medical equipment in medical practice, in collaboration with ASTM.

Characterization of waste - Leaching behaviour test - Determination of the reducing character and the reducing capacity

This Technical Specification specifies three laboratory tests to determine the reducing character and the reducing capacity of construction products, waste materials and the eluate resulting from exposure of these solids to a leachant. Reducing species released from the product are titrated to quantify the reducing capacity. For a specification of the materials with which experience has been acquired with the execution of the tests according to this Technical Specification see Annex A and [16]. NOTE Materials with reducing properties can in practice under both oxidising and anoxic (isolated) conditions show completely different leaching behaviour than obtained with the leaching tests specified in EN 16457. This may seriously hamper the interpretation of the leaching tests, if this condition is not taken into consideration.

Tanks for the transport of dangerous goods - Metallic tanks with a working pressure not exceeding 0,5 bar - Design and construction

This European Standard specifies requirements for the design and construction of metallic tanks with a maximum working pressure not exceeding 50 kPa gauge used for the transport of dangerous goods by road and rail for which Tank Code with letter "G" is given in Chapter 3.2 of ADR [2]. It also includes requirements for a system of identification of materials used in the construction of these tanks. This European Standard specifies requirements for openings, closures and structural equipment. NOTE 1 This document does not specify requirements for service equipment. This European Standard is applicable to aircraft refuellers that are used on public roads. It is also applicable to inter-modal tanks (e.g. tank containers and tank swap bodies) for the transport of dangerous goods by road and rail. NOTE 2 This document is not applicable to fixed rail tank wagons.

Röntgeni ja gamma referentskiirgus dosimeetrite ja doosikiiruse mõõtseadmete kalibreerimiseks ja nende koste määramiseks sõltuvana footoni energiast. Osa 2:

Kiirkuskaitseline dosimeetria energiavahemikus 8 keV kuni 1,3 MeV ja 4 MeV kuni 9 MeV

X and gamma reference radiation for calibrating dosimeters and doserate meters and for determining their response as a function of photon energy -- Part 2: Dosimetry for radiation protection over the energy ranges from 8 keV to 1,3 MeV and 4 MeV to 9 MeV

See standardi osa kirjeldab röntgeni ja gamma referentskiirguse dosimeetria protseduure kiirkuskaitse instrumentide kalibreerimiseks energiavahemikus ligikaudu 8 keV kuni 1,3 MeV ja 4 MeV kuni 9 MeV. Nende referentskiirguste alusel saadud nominaalseid kermakiiruse väärtsusi ja saamisviise kirjeldatakse standardi osas ISO 4037-1.

EVS-EN 60068-2-58:2015

Environmental testing - Part 2-58: Tests - Test Td: Test methods for solderability, resistance to dissolution of metallization and to soldering heat of surface mounting devices (SMD)

This part of IEC 60068 outlines test Td, applicable to surface mounting devices (SMD). This standard provides procedures for determining the solderability and resistance to soldering heat of devices in applications using solder alloys, which are eutectic or near eutectic tin lead (Pb), or lead-free alloys. The procedures use either a solder bath or reflow method and are applicable only to specimens or products designed to withstand short term immersion in molten solder or limited exposure to reflow systems. The solder bath method is applicable to SMDs designed for flow soldering and SMDs designed for reflow soldering when the solder bath (dipping) method is appropriate. The reflow method is applicable to the SMD designed for reflow soldering, to determine the suitability of SMDs for reflow soldering and when the solder bath (dipping) method is not appropriate. The objective of this standard is to ensure solderability of component lead or termination. In addition, test methods are provided to ensure that the component body can resist against the heat load to which it is exposed during soldering.

Tanks for the transport of dangerous goods - Metallic tanks with a working pressure not exceeding 0,5 bar - Design and construction

This European Standard specifies requirements for the design and construction of metallic tanks with a maximum working pressure not exceeding 50 kPa gauge used for the transport of dangerous goods by road and rail for which Tank Code with letter "G" is given in Chapter 3.2 of ADR [2]. It also includes requirements for a system of identification of materials used in the construction of these tanks. This European Standard specifies requirements for openings, closures and structural equipment. NOTE 1 This document does not specify requirements for service equipment. This European Standard is applicable to aircraft refuellers that are used on public roads. It is also applicable to inter-modal tanks (e.g. tank containers and tank swap bodies) for the transport of dangerous goods by road and rail. NOTE 2 This document is not applicable to fixed rail tank wagons.

Pipework - Corrugated metal hose assemblies for combustible gas - Performance requirements, testing and marking

This European Standard specifies general requirements for material, design, manufacture, testing, marking and documentation of corrugated metal hose assemblies for gas of diameter up to DN 300 for gases of the 2nd and 3rd families according to EN 437. This European Standard applies to: Corrugated metal hose assemblies for gas for the supply of combustible gas and having a maximum operating pressure (MOP) less than or equal to 16 bar. This European Standard does not apply to: - corrugated metal hose assemblies for gas for engines including turbines and internal combustion engines as stated by Pressure Equipment Directive 97/23/EC; - corrugated metal hose assemblies for the connection of domestic appliances using gaseous fuels according to EN 14800; - corrugated metal hose assemblies for gas buried in earth; - corrugated metal hose assemblies with non permanent detachable end fittings; - stainless steel pliable corrugated tubing kits in buildings for gas with an operating pressure up to 0,5 bar (EN 15266). Users of this European Standard should take into account national standards and existing code of practice in the country of destination.

Ohutus elektrokuumutuspaigaldistes ja elektromagnetiline töötlus. Osa 1: Üldnõuded Safety in installations for electroheating and electromagnetic processing - Part 1: General requirements

IEC 60519-1:2015 specifies general safety requirements for industrial installations or equipment intended for electroheating (EH) and electroheating based treatment technologies as well as for electromagnetic processing of materials (EPM). This fifth edition cancels and replaces the fourth edition published in 2010. This edition constitutes a technical revision. This edition includes the following significant technical changes with respect to the previous edition: a) The title and scope of the standard has been expanded to include installations and equipment for electromagnetic processing of materials. b) Terms and definitions as well as the list of normative references have been updated and completed with new items. c) The requirements have been restructured. d) Additional requirements for electric and magnetic fields, for touch currents as well as for optical radiation have been added. e) New clauses addressing verification have been added. f) New annexes specifying limits of exposure hazards for electric and magnetic fields, optical radiation, noise and vibration have been added. g) New annexes on EMC, markings and warnings, guidelines for using this standard and information on the connection to ISO 13577-1 have been added.

OPC unified architecture - Part 100: Device Interface

IEC 62541-100:2015 is an extension of the overall OPC Unified Architecture standard series and defines the information model associated with Devices. This part of IEC 62541 describes three models which build upon each other: - the (base) Device Model intended to provide a unified view of devices; - the Device Communication Model which adds Network and Connection information elements so that communication topologies can be created; - the Device Integration Host Model finally which adds additional elements and rules required for host systems to manage integration for a complete system. It allows reflecting the topology of the automation system with the devices as well as the connecting communication networks.

OPC unified architecture - Part 7: Profiles

IEC 62541-7:2015 describes the OPC Unified Architecture (OPC UA) Profiles. The Profiles in this document are used to segregate features with regard to testing of OPC UA products and the nature of the testing (tool based or lab based). This includes the testing performed by the OPC Foundation provided OPC UA CTT (a self-test tool) and by the OPC Foundation provided Independent certification test labs. It is also defining functionality that can only be tested in a lab and defining the grouping of functionality that is to be used when testing OPC UA products either in a lab or using automated tools. This second edition cancels and replaces the first edition published in 2012 and constitutes a technical revision. It includes the following changes: - Added a large number of new Facets to cover additional functional areas of OPC UA. Most significantly: - Facets for Historical Access; - Facets for Aggregates; - Facets for HTTPS; - New Security Facets; - New User Token Facet that supports anonymous access; - Best Practice Facets as well as New Security Policy for asymmetric key length > 2048.

EVS-EN 12309-2:2015

Gaasiküttega absorptsiooniprintsiibil kliima- ja/või soojsuspumbaseadmed, mille kasulik soojuskoormus ei ületa 70 kW. Osa 2: Ohutus

Gas-fired sorption appliances for heating and/or cooling with a net heat input not exceeding 70 kW - Part 2: Safety

1.1 Scope of EN 12309 series Appliances covered by this European Standard include one or a combination of the following: — gas fired sorption chiller; — gas fired sorption chiller/heater; — gas fired sorption heat pump. This European Standard applies to appliances only when used for space heating and cooling with or without heat recovery. This European Standard applies to appliances having flue gas systems of type B and C (according to CEN/TR 1749) and to appliances designed for outdoor installations. EN 12309 does not apply to air conditioners, it only applies to appliances having: — integral burners under the control of fully automatic burner control systems; — closed system refrigerant circuits in which the refrigerant does not come into direct contact with the water or air to be cooled or heated; — mechanical means to assist transportation of the combustion air and/or the flue gas. The above appliances can have one or more primary or secondary functions (i.e. heat recovery - see definitions in prEN 12309 1:2012). In the case of packaged units (consisting of several parts), the standard applies only to those designed and supplied as a complete package. The appliances having their condenser cooled by air and by the evaporation of external additional water are not covered by this European Standard. Installations used for heating and/or cooling of industrial processes are not within the scope of these standards. NOTE All the symbols given in this text are used regardless of the language used.

1.2 Scope of this Part 2 to EN 12309 This part of EN 12309 deals with the safety of gas-driven sorption heat pumps as defined in prEN 12309 1. Only types B12 for outdoor installations, B13 for outdoor installations, B22 for outdoor installations, B23 for outdoor installations, C12 and C13, C32 and C33 are covered in this European Standard.

Railway applications - Compatibility between rolling stock and train detection systems - Part 2: Compatibility with track circuits

This Technical Specification defines, for the purpose of ensuring compatibility between rolling stock and track circuits the limits for interference current emissions from rolling stock. The measurement and evaluation methods for verifying conformity of rolling stock to these limits are presented in a dedicated annex. The interference limits are only applicable to interoperable rolling stock which is intended to run on lines exclusively equipped with preferred track circuit listed in this Technical Specification. National Notified Technical Rules are still to be used in all cases, where the line over which the rolling stock is intended to run is equipped with any type of older version or non-preferred track circuits that are not listed in this Technical Specification. However, the rolling stock test methodology (infrastructure conditions, test configurations, operational conditions, etc.) presented in this Technical Specification is also applicable to establish compatibility with non-preferred track circuits. This Technical Specification gives guidance on the derivation of interference current limits specified for rolling stock and defines measurement methods and evaluation criteria in a dedicated annex. This Technical Specification defines: a) a set of interference current limits for RST (Rolling Stock) applicable for each of the following types of traction system: 1) DC (750 V, 1,5 kV and 3 kV); 2) 16,7 Hz AC; 3) 50 Hz AC; b) methodology for the demonstration of compatibility between rolling stock and track circuits; c) measurement method to verify interference current limits and evaluation criteria. NOTE 1 The basic parameters of track circuits associated with the interference current limits for RST are not in the scope of this Technical Specification. NOTE 2 Any phenomena linked to traction power supply and associated protection (over voltage, short-circuit current, under- and over-voltage if regenerative brakes are used) is part of the track circuit design and outside the scope of this Technical Specification.

Stationary electrostatic application equipment for ignitable flock material - Safety requirements

1.1 This European Standard specifies requirements for automatic electrostatic flock application equipment which is designed for applying ignitable flock which may form explosive atmospheres in the flock application area. In this context a distinction is made between flock application devices which due to their type of construction comply with the requirements as laid down in EN 50050-

3, as applicable, and those for which higher discharge energies are stipulated. This European Standard also specifies the constructional requirements for a safe operation of the stationary equipment of flock application booths, including the electrical installations and the accessories. This European Standard deals with all significant hazards, hazardous situations and events relevant to flock application booths, when they are used as intended and under conditions which are foreseeable as malfunction by the manufacturer (see Clause 4). 1.2 This European Standard considers three types of electrostatic flock systems. For more details, see Table 1. 1.3 This European Standard deals with those hazards occurring during stationary automatic electrostatic flocking. Among these hazards are, above all, ignition hazards of the generated explosive atmosphere and hazard to persons. 1.4 The stationary equipment dealt with in this European Standard is considered to be equipment of group II, category 3D for the use in areas with potential explosion hazards of zone 22. 1.5 This European Standard is not applicable for - flock systems in which mixtures of solvent vapours in air occur with a concentration of > 20 % of the LEL, - flock systems operated with AC voltage, - the application system for liquid or pasty substances (e.g. adhesives, primer), - the cleaning of flock application booths, - the storage and handling of ignitable substances outside the coating plant.

EVS-EN 60079-29-2:2015

Explosive atmospheres - Part 29-2: Gas detectors - Selection, installation, use and maintenance of detectors for flammable gases and oxygen

This Part of IEC 60079-29 gives guidance on, and recommended practice for, the selection, installation, safe use and maintenance of electrically operated Group II equipment intended for use in industrial and commercial safety applications and Group I equipment in underground coal mines for the detection and measurement of flammable gases complying with the requirements of IEC 60079-29-1 or IEC 60079-29-4. This standard is applicable for oxygen measurement for the purpose of inertisation where explosion protection is provided by the exclusion of oxygen instead of measuring the flammable gases or vapours present. A similar application is measuring oxygen when inertising a goaf (mined out) area in an underground coal mine. This standard is a

compilation of practical knowledge to assist the user, and applies to equipment, instruments and systems that indicate the presence of a flammable or potentially explosive mixture of gas or vapour with air by using an electrical signal from a gas sensor to produce a meter reading, to activate a visual or audible pre-set alarm or other device, or any combination of these. Such equipment may be used as a means of reducing the risk whenever there is the possibility of a risk to life or property specifically due to the accumulation of a flammable gas-air mixture, by providing such warnings. It may also be used to initiate specific safety precautions (e.g. plant shutdown, evacuation, fire extinguishing procedures). This standard is applicable to fixed installations and transportable equipment. Similarly it is applicable to the safe use of portable equipment. Since much modern equipment of this type also includes oxygen deficiency detection and/or specific toxic gas sensors, some additional guidance is given for these topics. For the purposes of this standard, except where specifically stated otherwise, flammable gases include flammable vapours. This standard applies to Group II equipment (i.e. equipment intended for use in industrial and commercial safety applications, involving areas classified in accordance with IEC 60079-10-1) and Group I equipment. For the purposes of this standard, equipment includes a) fixed equipment including equipment mounted on a vehicle; b) transportable equipment; and c) portable equipment. This standard is not intended to cover, but may provide useful information, for the following: a) equipment intended only for the detection of non-flammable toxic gases; b) equipment of laboratory or scientific type intended only for analysis or measurement purposes; d) equipment intended only for process control applications; e) equipment intended for applications in explosives processing and manufacture; f) equipment intended for the detection of explosive atmosphere resulting from dust or mist in air;

EVS-EN 60885-3:2015

Electrical test methods for electric cables - Part 3: Test methods for partial discharge measurements on lengths of extruded power cables

IEC 60885-3:2015 specifies the test methods for partial discharge (PD) measurements on lengths of extruded power cable, but does not include measurements made on installed cable systems. Reference is made to IEC 60270 which gives the techniques and considerations applicable to partial discharge measurements in general. This second edition of IEC 60885-3 cancels and replaces the first edition, published in 1988 and constitutes a technical revision. This edition includes the following significant technical changes with respect to the previous edition: - The definition of sensitivity as twice the background noise level has been removed and replaced by a practical assessment of sensitivity based on the minimum level of detectable discharge. - References to measurements of pulse heights in mm on an oscilloscope have been replaced by measurements of partial discharge magnitude in pC. - The order of the clauses has been revised in line with the general numbering scheme of IEC standards and to provide clarity in order to facilitate its practical use. Section 3 of the first edition (Application guide) has been removed as it is considered that background information is better obtained from the original references as listed in the bibliography.

EVS-EN 60968:2015

Sissehitatud liiteseadisega üldtarbe-luminofoorlambid. Ohutusnõuded Self-ballasted fluorescent lamps for general lighting services - Safety requirements

This International Standard specifies the safety and interchangeability requirements, together with the test methods and conditions required to show compliance of tubular fluorescent lamps with integrated means for controlling starting and stable operation (self-ballasted fluorescent lamps). These lamps are intended for domestic and similar general lighting purposes, having a rated voltage of 50 V to 250 V, having a rated frequency of 50 Hz or 60Hz and having IEC 60061-1 compliant caps. For a cap-holder system not specifically mentioned in this standard, the relevant information on safety related tests provided by the manufacturer will apply. The requirements of this standard relate only to type testing. Recommendations for whole product testing or batch testing are given in Annex A. This part of the standard covers photobiological safety according to IEC 62471 and IEC TR 62471-2. Blue light and infrared hazards are below the level which requires marking.

Lampide juhtimisseadised. Osa 1: Üld- ja ohutusnõuded Lamp controlgear - Part 1: General and safety requirements

This part of IEC 61347 specifies general and safety requirements for lamp controlgear for use on d.c. supplies up to 250 V and/or a.c. supplies up to 1 000 V at 50 Hz or 60 Hz. This standard also covers lamp controlgear for lamps which are not yet standardized. Tests dealt with in this standard are type tests. Requirements for testing individual lamp controlgear during production are not included. Requirements for semi-luminaires are given in IEC 60598-1:2014 (see definition 1.2.60). Particular requirements for controlgears providing safety extra low voltage (from now on SELV) are given in Annex L. It can be expected that lamp control gear which comply with this standard will not compromise safety between 90 % and 110 % of their rated supply voltage in independent use and when operated in luminaires complying with the safety standard IEC 60598-1 and the relevant part IEC 60598-2-xx and with lamps complying with the relevant lamp standards. Performance requirements may require tighter limits.

Üldtarbevalgustuse valgusdioodmoodulid. Ohutusnõuded LED modules for general lighting - Safety specifications

See rahvusvaheline standard käsitleb järgmistele valgusdioodmoodulitele esitatavaid üld- ja ohutusnõudeid: valgusdioodmoodulid ilma integreeritud liiteseadisteta, talitemiseks konstantsel pingel, konstantsel voolul või konstantsel võimsusel; ballastseadist sisaldavad valgusdioodmoodulid talitemiseks alalis-toitepingel kuni 250 V või vahelduv-toitepingel kuni 1000 V sagedusega 50 Hz või 60 Hz. MÄRKUS 1 Eraldi paiknevale liiteseadisele esitatavad ohutusnõuded on sätestatud standardis IEC 61347-2-13. Eraldi paikneva liiteseadise toimivusnõuded on sätestatud standardis IEC 62384. MÄRKUS 2 Nõuded integreeritud liiteseadisega, lambisokliga varustatud valgusdioodmoodulitele (ballastseadist sisaldavatele lampidele), mis on ette nähtud kasutamiseks võrgutoitelises üldtarbevalgustuses, koos samasuguse sokliga lampide asendamise võimalusega, on sätestatud standardis IEC 60968 (olemasoleva väljaande muudatus või uue, laiemaks käsitusulalaga väljaanne on arutusel). Nõuded integreeritud liiteseadisega, lambisokliga varustatud valgusdioodmoodulitele (ballastseadist sisaldavatele lampidele), mis on ette nähtud kasutamiseks mitte-võrgutoitelises üldtarbevalgustuses, koos samasuguse sokliga lampide asendamise võimalusega, on arutusel. MÄRKUS 3 Kui selle standardi nõuded käivad mõlema valgusdioodmooduli liigi kohta, nii integreeritud liiteseadisega kui ka ilma selleta, kasutatakse teminit valgusdioodmoodul üksinda, mõeldakse selle all ilma integreeritud liiteseadiseta valgusdioodmoodulit. MÄRKUS 4 See standard sisaldab teavet fotobioloogilise ohutuse kohta.

EVS-EN 62271-3:2015

High-voltage switchgear and controlgear - Part 3: Digital interfaces based on IEC 61850

IEC 62271-3:2015 is applicable to high-voltage switchgear and controlgear for all rated voltage levels above 1 kV and assemblies thereof and specifies equipment for digital communication with other parts of the power utility automation and its impact on testing. This equipment for digital communication, replacing metal parallel wiring, can be integrated into the high-voltage switchgear, controlgear, and assemblies thereof, or can be external equipment in order to provide compliance for existing switchgear and controlgear and assemblies thereof with the standards of the IEC 61850 series. This second edition cancels and replaces the first edition published in 2006. This edition constitutes a technical revision. This edition includes the following significant technical changes with respect to the previous edition: a) an update to the latest edition(s) of IEC 61850 series; (e.g. Annex B "LNs for sensors and monitoring" of edition 1 has been deleted since these LNs are now covered by standard IEC 61850-7-4:2010) b) an update of normative references; c) the minimum voltage range this standard refers to, was changed from 72,5 kV to above 1 kV; d) the description of performance tests and conformance tests became more specific; e) the new - informative - Annex C gives an example for performance type testing; f) 6.2.3 "transmission systems" as well as appropriate subclauses have been superseded by standard IEC TR 61850-90-4:2013; g) fibre optical connector type LC becomes only recommended type of fibre optic connector in accordance with IEC TR 61850-90-4:2013; h) electronic nameplates have been redefined as extension of LN XCBR and LN XSWI with data objects, reflecting required additional name plate information.

Preferred number series for resistors and capacitors

IEC 60063:2015 provides series of preferred values for the resistance of resistors and for the capacitance of capacitors. The definition of such series with a defined numeric resolution is a basic prerequisite for the marking and coding of capacitors and resistors with their respective capacitance or resistance values as described in IEC 60062. This edition includes the following significant technical changes with respect to the previous edition: - revision of the information on a relationship between an E Series and the tolerance of a resistance or capacitance value of a respective component; - introduction of advice on a possible deduction from the marking of a component to an associated E Series and also to an associated tolerance; - complete editorial revision.

Fixed resistors for use in electronic equipment - Part 8-1: Blank detail specification: Fixed surface mount (SMD) low power film resistors for general electronic equipment, classification level G

IEC 60115-8-1:2014 is applicable to the drafting of detail specifications for fixed surface mount (SMD) low-power film resistors in rectangular chip shape (styles RR) or in cylindrical MELF shape (styles RC) classified to level G, which is defined in IEC 60115-8:2009, 1.5 for general electronic equipment, typically operated under benign or moderate environmental conditions, where the major requirement is function. Examples for level G include consumer products and telecommunication user terminals. This edition includes the following significant technical changes with respect to the previous edition: - It includes minor revisions related to tables, figures and references. - Dedication to resistors of product classification level G, which is for general electronic equipment, typically operated under benign or moderate environmental conditions, like e.g. consumer products, or telecommunication user terminals. - Implementation of the zero defect policy with the application of the single assessment level EZ in all test schedules. - Substitution of the temperature coefficient of resistance (TCR), specified over the full defined temperature range, for the inferior and less significant temperature characteristic. - Addition of a test for the immunity against electrostatic discharge. - Implementation of the concept of stability classes with coordinated requirements to the performance at all prescribed tests. - Addition of information relevant for the component user in his assembly process. - Addition of an Annex providing special provisions for 0 resistors (jumpers), which may be part of a range of products covered by a detail specification derived from this blank detail specification.

EVS-EN 60793-1-43:2015

Optical fibres - Part 1-43: Measurement methods and test procedures - Numerical aperture measurement

IEC 60793-1-43:2015 establishes uniform requirements for measuring the numerical aperture of optical fibre, thereby assisting in the inspection of fibres and cables for commercial purposes. The numerical aperture (NA) of categories A1, A2, A3 and A4 multimode fibre is an important parameter that describes a fibre's light-gathering ability. It is used to predict launching efficiency, joint loss at splices, and micro/macrobending performance. The numerical aperture is defined by measuring the far-field pattern (NAff). In some cases the theoretical numerical aperture (NAth) is used in the literature, which can be determined from measuring the difference in refractive indexes between the core and cladding. Ideally these two methods should produce the same value. This second edition of IEC 60793-1-43, together with other standards in the IEC 60793-4X series, cancels and replaces the first edition of IEC 60793-1-43, published in 2001, and constitutes a technical revision. This edition includes the following significant technical changes with respect to the previous edition: - expansion of the scope to include A1, A2, A3 and A4 multimode fibre categories; - addition of measurement parameters of sample length and threshold values, product specific to the variables that are now found in the product specifications; - a new Annex B entitled "Product specific default values for NA measurement"; - addition of a new Technique 4 for measuring NA of A4d fibres; - a new Annex A entitled "Mapping NA measurement to alternative lengths" that gives a mapping function to correlate shorter sample length measurements to the length suggested in the reference test method Naff. Keywords: numerical aperture of optical fibre, inspection of fibres and cables

Optical fibre cables - Part 1-21: Generic specification - Basic optical cable test procedures - Mechanical tests methods

IEC 60794-1-21:2015(E) applies to optical fibre cables for use with telecommunication equipment and devices employing similar techniques, and to cables having a combination of both optical fibres and electrical conductors. The object of this standard is to define test procedures to be used in establishing uniform requirements for mechanical requirement performance. Throughout this standard the wording "optical cable" may also include optical fibre units, microduct fibre units, etc. General requirements and definitions are given in IEC 60794-1-20 and a complete reference guide to test method of all types in the IEC 60794-1-2. This first edition of IEC 60794-1-21 cancels and replaces the mechanical tests part of the second edition of IEC 60794-1-2, published in 2003. It constitutes a technical revision. Keywords: optical fibre cables for use with telecommunication equipment, test procedures

Elektromagnetiline ühilduvus. Osa 6-7: Üldstandardid. Immuunsusnõuded ohutussüsteemi (talitusohutus) seadmetele tööstuskeskkonnas

Electromagnetic compatibility (EMC) - Part 6-7: Generic standards - Immunity requirements for equipment intended to perform functions in a safety-related system (functional safety) in industrial locations

IEC 61000-6-7:2014 is intended to be used by suppliers when making claims for the immunity of equipment intended for use in safety-related systems against electromagnetic disturbances. This standard should also be used by designers, integrators, installers, and assessors of safety-related systems to assess the claims made by suppliers. It provides guidance to product committees. This part of IEC 61000 applies to electrical and electronic equipment intended for use in safety-related systems and that is: - intended to comply with the requirements of IEC 61508 and/or other sector-specific functional safety standards; - and intended to be operated in industrial locations as described in 3.1.15. The object of this standard is to define immunity test requirements for equipment in relation to continuous and transient, conducted and radiated disturbances, including electrostatic discharge. These requirements apply only to functions intended for use in functional safety applications. Test requirements are specified for each port considered.

Radio Data System (RDS) - Receiver products and characteristics - Methods of measurement

IEC 62634:2015 describes how to measure minimum RDS receiver performance requirements which concern three RDS receiver product categories. However, it should be noted that there are also RDS receiver products on the market that significantly outperform the minimum RDS receiver performance requirements quoted. This second edition cancels and replaces the first edition published in 2011 and constitutes a technical revision. It includes the following changes: - the 100 kHz test measurement case from Clause 8 of IEC 62634:2011 was deleted as it did not permit to achieve stable and reproducible measurement results; - an error has been corrected. The term "de-emphasis" shall read correctly "pre-emphasis".

Cylindrical cavity method to measure the complex permittivity of low-loss dielectric rods

IEC 62810:2015(E) relates to a measurement method for complex permittivity of a dielectric rod at microwave frequency. This method has been developed to evaluate the dielectric properties of low-loss materials in coaxial cables and electronic devices used in microwave systems. It uses the TM010 mode in a circular cylindrical cavity and presents accurate measurement results of a dielectric rod sample, where the effect of sample insertion holes is taken into account accurately on the basis of the rigorous electromagnetic analysis.

Intelligent transport systems - Cooperative systems - State of the art of Local Dynamic Maps concepts (ISO/TR 17424:2015)

TR 17424 deliver information about the current status of the Local Dynamic Map (LDM) concepts as they have been developed in the different R&D projects in Europe, Japan and the USA. It presents different architectures, implementations, LDM functional blocks and the related standardization activities. TR 17424 proposes actions for future standardization activities and harmonization needs. – Definition of the LDM (based on EU projects SAFESPOT, CVIS, and COMeSafety) – Thesis: The LDM is a subsystem located within an ITS station. – A LDM typical consists of several elements or functions: o LDM management including synchronization and update o LDM data storage o LDM security o LDM content integrity o LDM policy advisor (privacy) o LDM arbiter / screening, prioritizing o LDM SAPs / data access o LDM broker (shared data management) The draft TR is ready for DTR comment ballot submission.

CEN/TS 14014:2015

Postal services - Hybrid mail - XML definition of encapsulation of letters for automated postal handling

The purpose of this Technical Specification is to define the syntax rules for a data stream for the submission of printing data to a Hybrid Mail operator or between Hybrid Mail operators. The Technical Specification defines a XML Schema Definition (XSD) describing the data stream. The description is based upon the XML (eXtended Mark-up Language) definition of rules and semantics for defining an XSD. The purpose of this is to offer a generalised syntax description that can provide seamless integration with a number of existing applications generating data that is liable to be forwarded to or from a Hybrid Mail operator. The use of an XSD will ensure that the documents conform to the standard defined and that the output has the correct syntax. Software manufacturers can use an XSD to program applications that will produce correct outputs. This Technical Specification defines the syntax for creating a data stream that will eventually be converted into a deliverable. The overall object (a batch) can be divided into one or more objects that again can be divided into objects. The hierarchy includes bundles that contain a common part and letters. Each object has a number of characteristics attached to it. This diagram shows the structure of a HML (Hybrid Mail Language) document: each letter is self-contained (contains all the necessary information to be delivered on a certain destination). Each letter can have one contact. Each contact can have multiple alternatives for delivery. This Technical Specification does not define the specific services offered by local operators (Hybrid Mail operators). This Technical Specification does not define the communication method used. It does only define the format of Hybrid Mail as such.

CEN/TS 16794-1:2015

Public transport - Communication between contactless readers and fare media - Part 1: Implementation requirements for ISO/IEC 14443

This Technical Specification sets out the technical requirements to be met by contactless fare management system terminals and contactless fare media hosting a transport ticketing application in order to be able to interface together using the ISO/IEC 14443 standard contactless communications protocol. This Technical Specification applies to: - any contactless fare management system terminal acting as a PCD contactless reader based on ISO/IEC 14443 standard series; - any contactless fare media acting as a PICC contactless object based on ISO/IEC 14443 standard series. The purpose of these implementation requirements is to ensure contactless communications interoperability between contactless fare management system terminals and any contactless fare media liable to be accepted by them, once both terminal and fare media have been certified as meeting the requirements of these implementation requirements. An interface-oriented test approach will be used to evaluate the interoperability of relevant components and is defined in CEN/TS 16794-2, Public transport - Communication between contactless readers and fare media - Part 2: Test plan for ISO/IEC 14443. Application-to-application exchanges executed once contactless communication has been established at RF level fall outside the scope of these implementation requirements. In line with the rules on independency between OSI protocol layers, these implementation requirements work on the assumption that application-to-application exchanges are not contingent on the type of contactless communication established or by the parameters used for the low-level protocol layers that serve as the platform for these application-to-application exchanges.

Keel: en
Alusdokumendid: CEN/TS 16794-1:2015

CEN/TS 16794-2:2015

Public transport - Communication between contactless readers and fare media - Part 2: Test plan for ISO/IEC 14443

This Technical Specification comes as a complement to the technical requirements expressed in CEN/TS 16794-1, Public transport - Communication between contactless readers and fare media - Part 1: Implementation requirements for ISO/IEC 14443, for ensuring contactless communication interoperability between contactless fare management system terminals and contactless fare media hosting a transport ticketing application. This test plan lists all the test conditions to be performed on a contactless reader or a contactless fare media in order to ensure that all the requirements specified in CEN/TS 16794-1 are met for the device under test. This Technical Specification is then applicable to: - any contactless fare management system terminals acting as a PCD contactless reader based on ISO/IEC 14443-series standards; - any contactless fare media acting as a PICC contactless object based on ISO/IEC 14443-series standards. This test plan applies solely to the contactless communication layers described in parts 1 to 4 of the ISO/IEC 14443 series of standards. Application-to-application exchanges executed once contactless communication has been established at RF level fall outside the scope of this test plan. However, a transport ticketing application will need to be used so as to make end-to-end transactions during tests on the RF communication layer. This test plan does not duplicate the contents of ISO/IEC 14443 series or ISO/IEC 10373 6 standards. It makes reference to the ISO/IEC 10373 6 applicable tests methods, specifies the test conditions to be used and describes the additional specific test conditions that may be run. The list of test conditions applicable to the device under test will be conditioned by the Information Conformance Statement (ICS) declaration made by the device manufacturer. For each test case, the test conditions are clearly specified in order to determine the pertinence to run or not the test case in accordance with the device capabilities or in accordance with the device manufacturer's choice. In order to facilitate the test report issuance, a test report template is included in Annex A of the present test plan. Although the present test plan aims at becoming the primary basis for certification of contactless communication protocol between contactless reader and contactless object, it does not describe any certification or qualification processes as such processes should be defined between local or global transit industry stakeholders and not within this CEN work group.

OPC unified architecture - Part 100: Device Interface

IEC 62541-100:2015 is an extension of the overall OPC Unified Architecture standard series and defines the information model associated with Devices. This part of IEC 62541 describes three models which build upon each other: - the (base) Device Model intended to provide a unified view of devices; - the Device Communication Model which adds Network and Connection information elements so that communication topologies can be created; - the Device Integration Host Model finally which adds additional elements and rules required for host systems to manage integration for a complete system. It allows reflecting the topology of the automation system with the devices as well as the connecting communication networks.

OPC unified architecture - Part 7: Profiles

IEC 62541-7:2015 describes the OPC Unified Architecture (OPC UA) Profiles. The Profiles in this document are used to segregate features with regard to testing of OPC UA products and the nature of the testing (tool based or lab based). This includes the testing performed by the OPC Foundation provided OPC UA CTT (a self-test tool) and by the OPC Foundation provided Independent certification test labs. It is also defining functionality that can only be tested in a lab and defining the grouping of functionality that is to be used when testing OPC UA products either in a lab or using automated tools. This second edition cancels and replaces the first edition published in 2012 and constitutes a technical revision. It includes the following changes: - Added a large number of new Facets to cover additional functional areas of OPC UA. Most significantly: - Facets for Historical Access; - Facets for Aggregates; - Facets for HTTPS; - New Security Facets; - New User Token Facet that supports anonymous access; - Best Practice Facets as well as New Security Policy for asymmetric key length > 2048.

Railway applications - Compatibility between rolling stock and train detection systems - Part 2: Compatibility with track circuits

This Technical Specification defines, for the purpose of ensuring compatibility between rolling stock and track circuits the limits for interference current emissions from rolling stock. The measurement and evaluation methods for verifying conformity of rolling stock to these limits is presented in a dedicated annex. The interference limits are only applicable to interoperable rolling stock which is intended to run on lines exclusively equipped with preferred track circuit listed in this Technical Specification. National Notified Technical Rules are still to be used in all cases, where the line over which the rolling stock is intended to run is equipped with any type of older version or non-preferred track circuits that are not listed in this Technical Specification. However, the rolling stock test methodology (infrastructure conditions, test configurations, operational conditions, etc.) presented in this Technical Specification is also applicable to establish compatibility with non-preferred track circuits. This Technical Specification gives guidance on the derivation of interference current limits specified for rolling stock and defines measurement methods and evaluation criteria in a dedicated annex. This Technical Specification defines: a) a set of interference current limits for RST (Rolling Stock) applicable for each of the following types of traction system: 1) DC (750 V, 1,5 kV and 3 kV); 2) 16,7 Hz AC; 3) 50 Hz AC;

b) methodology for the demonstration of compatibility between rolling stock and track circuits; c) measurement method to verify interference current limits and evaluation criteria. NOTE 1 The basic parameters of track circuits associated with the interference current limits for RST are not in the scope of this Technical Specification. NOTE 2 Any phenomena linked to traction power supply and associated protection (over voltage, short-circuit current, under- and over-voltage if regenerative brakes are used) is part of the track circuit design and outside the scope of this Technical Specification.

This International Standard specifies the tolerances for the bottles intended to be used for pharmaceutical products, cosmetic and perfumery products and chemical products. The following tolerances are concerned: — brimful capacity; — height; — diameter and width; — verticality. The following types of bottles are excluded from this International Standard: — "miniatures"; — small bottles for extracts, essences, etc.; — small jars (e.g. individual portions of jam).

Geosynthetics - Wide-width tensile test (ISO 10319:2015)

This International Standard describes an index test method for the determination of the tensile properties of geosynthetics (polymeric, glass, and metallic), using a wide-width strip. This International Standard is applicable to most geosynthetics, including woven geotextiles, nonwoven geotextiles, geocomposites, knitted geotextiles, geonets, geomats, and metallic products. It is also applicable to geogrids and similar open-structure geotextiles, but specimen dimensions might need to be altered. It is not applicable to polymeric or bituminous geosynthetic barriers, while it is applicable to clay geosynthetic barriers. This International Standard specifies a tensile test method that covers the measurement of load elongation characteristics and includes procedures for the calculation of secant stiffness, maximum load per unit width and strain at maximum load. Singular points on the load-extension curve are also indicated. Procedures for measuring the tensile properties of both conditioned and wet specimens are included in this International Standard.

Petroleum and natural gas industries - Pipeline transportation systems (ISO 13623:2009 modified)

This European Standard specifies requirements and gives recommendations for the design, materials, construction, testing, operation, maintenance and abandonment of pipeline systems used for transportation in the petroleum and natural gas industries. It applies to pipeline systems on land (see exclusion below) and offshore, connecting wells, production plants, process plants, refineries and storage facilities, including any section of a pipeline constructed within the boundaries of such facilities for the purpose of its connection. The extent of pipeline systems covered by this European Standard is illustrated in Figure 1. This European Standard applies to rigid, metallic pipelines. It is not applicable for flexible pipelines or those constructed from other materials, such as glass-reinforced plastics. This European Standard is applicable to all new pipeline systems and can be applied to modifications made to existing ones. It is not intended that it apply retroactively to existing pipeline systems. It describes the functional requirements of pipeline systems and provides a basis for their safe design, construction, testing, operation, maintenance and abandonment. On-land supply systems used by the European gas supply industry from the input of gas into the on-land transmission network up to the inlet connection of gas appliances are excluded from the scope of this European Standard.

EVS-EN 50223:2015

Kohtkindlad elektrostaatilised rakendusseadmed süttivale helvesmaterjalile. Ohutusnõuded Stationary electrostatic application equipment for ignitable flock material - Safety requirements

1.1 This European Standard specifies requirements for automatic electrostatic flock application equipment which is designed for applying ignitable flock which may form explosive atmospheres in the flock application area. In this context a distinction is made between flock application devices which due to their type of construction comply with the requirements as laid down in EN 50050-3, as applicable, and those for which higher discharge energies are stipulated. This European Standard also specifies the constructional requirements for a safe operation of the stationary equipment of flock application booths, including the electrical installations and the accessories. This European Standard deals with all significant hazards, hazardous situations and events relevant to flock application booths, when they are used as intended and under conditions which are foreseeable as malfunction by the manufacturer (see Clause 4). 1.2 This European Standard considers three types of electrostatic flock systems. For more details, see Table 1. 1.3 This European Standard deals with those hazards occurring during stationary automatic electrostatic flocking. Among these hazards are, above all, ignition hazards of the generated explosive atmosphere and hazard to persons. 1.4 The stationary equipment dealt with in this European Standard is considered to be equipment of group II, category 3D for the use in areas with potential explosion hazards of zone 22. 1.5 This European Standard is not applicable for - flock systems in which mixtures of solvent vapours in air occur with a concentration of > 20 % of the LEL, - flock systems operated with AC voltage, - the application system for liquid or pasty substances (e.g. adhesives, primer), - the cleaning of flock application booths, - the storage and handling of ignitable substances outside the coating plant.

Doors - Operating forces - Requirements and classification

This European Standard is applicable to hinged/pivoted and sliding doorsets with latches, for pedestrian use. It defines the classification of the test results for the forces and/or torques to open/close doors and to engage/release and lock/unlock the hardware using a key or handle, after testing in accordance with EN 12046 2. It is only applicable to the manual operation of doorsets. The classification of forces for doorsets with self-closing devices engaged is excluded from this test method. It is also not applicable to doorsets with special hardware, e.g. emergency exit devices. The tests are applicable to doorsets of any material. The operation of some glazed doors (door high windows) involves hardware with latches and may be classified in accordance with this European Standard.

EVS-EN 12309-2:2015

Gaasiküttega absorptsiooniprintsiibil kliima- ja/või soojuspumbaseadmed, mille kasulik soojuskoormus ei ületa 70 kW. Osa 2: Ohutus **Gas-fired sorption appliances for heating and/or cooling with a net heat input not exceeding 70 kW - Part 2: Safety**

1.1 Scope of EN 12309 series Appliances covered by this European Standard include one or a combination of the following: — gas fired sorption chiller; — gas fired sorption chiller/heater; — gas fired sorption heat pump. This European Standard applies to appliances only when used for space heating and cooling with or without heat recovery. This European Standard applies to appliances having flue gas systems of type B and C (according to CEN/TR 1749) and to appliances designed for outdoor installations. EN 12309 does not apply to air conditioners, it only applies to appliances having: — integral burners under the control of fully automatic burner control systems; — closed system refrigerant circuits in which the refrigerant does not come into direct contact with the water or air to be cooled or heated; — mechanical means to assist transportation of the combustion air and/or the flue gas. The above appliances can have one or more primary or secondary functions (i.e. heat recovery - see definitions in prEN 12309 1:2012). In the case of packaged units (consisting of several parts), the standard applies only to those designed and supplied as a complete package. The appliances having their condenser cooled by air and by the evaporation of external additional water are not covered by this European Standard. Installations used for heating and/or cooling of industrial processes are not within the scope of these standards. NOTE All the symbols given in this text are used regardless of the language used.

1.2 Scope of this Part 2 to EN 12309 This part of EN 12309 deals with the safety of gas-driven sorption heat pumps as defined in prEN 12309 1. Only types B12 for outdoor installations, B13 for outdoor installations, B22 for outdoor installations, B23 for outdoor installations, C12 and C13, C32 and C33 are covered in this European Standard.

Gaasküttega veevahetkutseadmed kodumajapidamises. Osa 2: Energiatarbimise hindamine **Gas-fired domestic appliances producing hot water - Part 2: Assessment of energy consumption**

This European Standard is applicable to gas-fired appliances producing domestic hot water. It applies to both instantaneous and storage tank appliances; waters-heaters and combination boilers that have: - a heat input not exceeding 70 kW; and - a hot water storage tank capacity (if any) not exceeding 500 l. In the case of combination boilers, with or without storage tank, domestic hot water production is integrated or coupled, the whole being marketed as a single unit. EN 13203-1 sets out in qualitative and quantitative terms the performance in delivery of domestic hot water for a selected variety of uses. It also gives a system for presenting the information to the user. The present document sets out a method for assessing the energy performance of the appliances. It defines a number of daily tapping cycles for each domestic hot water use, kitchen, shower, bath and a combination of these, together with corresponding test procedures, enabling the energy performances of different gas-fired appliances to be compared and matched to the needs of the user. Where other technologies are combined with a gas-fired boiler or a water heater to produce domestic hot water, specific parts of EN 13203 apply.

External blinds and awnings - Performance requirements including safety

This European Standard specifies the performance requirements for blinds and awnings intended to be fitted externally to buildings and other construction works. It deals also with the significant hazards for assembly, transport, installation, operation and maintenance (see list of significant machine hazards in Annex B). It applies to all external blinds and awnings whatever their design and nature of the materials used, as follows and defined in EN 12216: — folding arm awning, trellis arm awning, pivot arm awning, slide arm awning, vertical roller blind, marquisolette, façade awning, skylight awning, conservatory awning, Pergola awning, Dutch awning, insect screen; brise-soleil. This European Standard does not cover the wind resistance of non-retractable products, e.g. Dutch awnings and brise-soleil. The structural part to which the Pergola awning is fixed is not covered. The products covered by this European Standard may be operated manually, with or without compensating springs or by means of electric motors (power operated products). However, the durability and endurance of the autonomous supply for power operated external blinds and awnings not connected to the mains supply are not covered. This European Standard deals also with all significant hazards, hazardous situations and events when external blinds and awnings are used as intended and under conditions of misuse which are reasonably foreseeable by the manufacturer (see Annex B). This European Standard covers external blinds and awnings mounted externally. In case such products are installed internally, they should fulfil all relevant safety requirements defined in EN 13120. The noise emission of power operated external blinds and awnings is not considered to be a relevant hazard according to the machinery health and safety requirements. Therefore this European Standard does not contain any specific requirements on noise health and safety objective.

Shutters and external venetian blinds - Performance requirements including safety

This European Standard specifies the performance requirements for shutters and external venetian blinds intended to be fitted externally to buildings and other construction works. It deals also with the significant hazards for assembly, transport, installation, operation and maintenance (see list of significant machine hazards in Annex C). It applies to all shutters and external venetian blinds whatever their use and nature of the materials used, as follows and defined in EN 12216: - external venetian blind, roller shutter, wing shutter, Venetian shutter, flat-closing concertina shutter, concertina shutter or sliding panel shutter, with or without a system of projection. These products can be operated manually with or without compensating spring, or by means of electric motors (power operated products). However, the durability and endurance of the autonomous supply for power operated shutters and external venetian blinds not connected to the mains supply are not covered. This European Standard deals also with all significant hazards, hazardous situations and events when shutters and external venetian blinds are used as intended and under conditions of misuse which are reasonably foreseeable by the manufacturer (see Annex D). This European Standard covers shutters and external venetian blinds mounted externally. In case such products are installed internally, they should fulfil all relevant safety requirements defined in EN 13120. The noise emission of power operated shutters and external venetian blinds is not considered to be a relevant hazard health and safety requirements. Therefore this European Standard does not contain any specific requirements on noise health and safety objective.

Curtain walling - Product standard

This European Standard specifies requirements of curtain walling kit intended to be used as a building envelope to provide weather resistance, safety in use and energy economy and heat retention and provides test/assessments/calculation methods and compliance criteria of the related performances. The curtain walling kit covered by this standard should fulfil its own integrity and mechanical stability but does not contribute to the load bearing or stability of the main building structure, and could be replaced independently of it. This standard applies to curtain walling kit ranging from a vertical position to $\pm 15^\circ$ from the vertical. Any sloping parts should be contained within the curtain walling kit. This standard is applicable to the whole of the curtain walling kits, including the fixings. Curtain walling according to this standard is intended to be used as part of the building envelope. This European Standard does not include: - Patent glazing (glazed sloping roofs) kits; - Roof glazing constructions; - Façades made of precast concrete panels as part of the wall (see EN 14992). NOTE 1 Precast concrete panels may be used in curtain walling kits as infill panels. NOTE 2 Durability of structural sealed glazing infills is not covered by this standard.

EVS-EN 459-1:2015

Building lime - Part 1: Definitions, specifications and conformity criteria

The revision of this European Standard for building lime was initiated by Decision 4 taken by CEN/TC 51 "Cement and building limes" in 2013. Different sources of raw materials and different climatic conditions have led to different developments in building construction and civil engineering practices and materials and therefore to different kinds of building lime in different regions of Europe. The inclusion of a wider range of building lime which exists in Europe has made it necessary to establish a number of classes. The previous national standards for building lime generally also formed the basis for different areas of application (see Annex C (informative)). The classification chosen therefore also takes into consideration these circumstances as far as possible. For a better understanding, the standard makes a clear distinction between air lime (Clause 4) and lime with hydraulic properties (Clause 5). Depending on the composition and characteristics of the products, each clause is then divided into sub-paragraphs (calcium lime and dolomitic lime for air lime; natural hydraulic lime, formulated lime and hydraulic lime for lime with hydraulic properties) containing the appropriate definitions, specifications and conformity criteria.

Madalpingelised elektripaigaldised. Osa 4-42: Kaitseviisid. Kaitse kuumustoime eest

Low voltage electrical installations - Part 4-42: Protection for safety - Protection against thermal effects

IEC 60364 see osa kehtib elektripaigaldiste kohta, milles on vaja rakendada meetmeid inimeste, koduloomade ja vara kaitseks — elektriseadmetest põhjustatud kuumustoimete, materjalide süttimise või lagunemise ja põletuste riski eest; — tuleohu korral tekivate leekide leviku eest elektripaigaldistest lähedal asuvatesse teistesesse toletökkevaheseintega eraldatud ehitiseosadesse; — elektriseadmete, sealhulgas turvaseadmete toimivuse halvenemise eest. MÄRKUS 1 Kaitseks kuumustoimete eest võib rakendada rahvuslike õigusaktide nõudeid. MÄRKUS 2 Kaitse liigvoolude eest on sätestatud standardis IEC 60364-4-43.

93 RAJATISED

EVS-EN 12699:2015

Execution of special geotechnical works - Displacement piles

1.1 This European Standard establishes general principles for the execution of displacement piles, that means piles which are installed in the ground without excavation or removal of material from the ground except for limiting heave and/or limiting vibration as well as removal of obstructions or to assist penetration. Piles are driven into the ground using impact, vibration, pressing, screwing or a combination of these methods. 1.2 The material of displacement piles covered by this European Standard can be: - steel; - cast iron; - concrete, mortar; - timber; - grout; - combination of above. 1.3 This European Standard covers prefabricated, cast in situ, or a combination of these methods to form displacement piles of regular shape. Examples are given in Figure A.2 and Figure A.3. 1.4 Displacement piles may be installed in soils enhanced by ground improvement techniques. The ground improvement can be executed before, at the same time or after installation of the piles. 1.5 Other than practical considerations there are for the purpose of this European Standard no limitations regarding cross section dimensions, shaft or base enlargements, length or rake. 1.6 The provisions of this European Standard apply to: - single piles; - pile groups; - concrete sheet piles. 1.7 Columns constructed by ground improvement techniques (such as mixed in situ columns, jet grouting, compaction grouting, vibro flotation, stone columns) are not covered by this European Standard. Bored piles are covered in EN 1536. Steel and timber sheet pile walls are covered in EN 12063. Micropiles are covered in EN 14199.

Hydraulic road binders - Part 2: Normal hardening hydraulic road binders - Composition, specifications and conformity criteria

-This European Standard defines and gives the specifications for normal hardening hydraulic road binders, produced in a factory and supplied ready for treatment of materials for bases, sub-bases and capping layers as well as earthworks, in road, railway, airport and other types of infrastructures. It includes the mechanical, physical and chemical requirements and the classification of these binders based on their compressive strength at 56 days. It also includes the conformity criteria and evaluation procedures to be applied by the manufacturer.

EVS-EN 14199:2015

Execution of special geotechnical works - Micropiles

1.1 This European Standard establishes general principles for the execution of micropiles. They are for drilled piles constructed using a drilling tool with a diameter less than 300 mm. NOTE 1 This European Standard is not applicable to driven piles, the execution of which is governed by EN 12699. NOTE 2 For a definition of shaft diameter see 3.3. 1.2 Micropiles are structural members to transfer actions to the ground and can contain bearing elements to transfer directly or indirectly loads and/or to limit deformations. For examples of micropiles see Figure 1, Figure 2 and Figure 3. Their shaft and base resistance can be improved (mostly by grouting) and they can be constructed with (see Figure 4): - uniform cross section (straight shaft); or - telescopically changing shaft dimensions; - shaft enlargements; and/or - base enlargement. 1.3 Other than practical considerations, there are no limitations regarding, length, inclination (definition of inclination, see Figure 5), slenderness ratio or shaft and base enlargements. 1.4 The provisions of this European Standard apply to (see Figure 6): - single micropiles; - micropile groups; - reticulated micropiles; - micropile walls. 1.5 The material of micropiles covered by this European Standard can be: - steel or other reinforcement materials; - grout, mortar or concrete; - a combination of above. 1.6 Micropiles can be used for: - working under restricted access and/or headroom conditions; - foundations of new structures (particularly in very heterogeneous soil or rock formations); - reinforcing or strengthening of existing structures to increase the capacity to transfer load to depth with acceptable load settlement characteristics, e.g. underpinning works; - reducing settlements and/or displacements; - forming a retaining wall; - reinforcing of soil to form a bearing and/or retaining structure; - improving slope stability; - securing against uplift; - other applications where micropile techniques are appropriate. 1.7 Deep mixing columns according to EN 14679 are not included in this European Standard. Columns constructed by jet grouting are covered by EN 12716. Ground anchors are covered by EN 1537.

EVS-EN ISO 18674-1:2015

Geotechnical investigation and testing - Geotechnical monitoring by field instrumentation - Part 1: General rules (ISO 18674-1:2015)

This Standard applies to performance monitoring of the ground, structures interacting with the ground and geotechnical works. Specifically, this Standard is applicable to field instrumentation and measurements carried out in connection with site investigations of soils and rocks in accordance with EN 1997-2; in connection with the Observational Design procedure in accordance with EN 1997-1; for ground behaviour evaluation, e.g. unstable slopes, consolidation etc or the proof or follow-up of a new equilibrium within the ground, after disturbance of its natural state by construction measures (e.g. foundation loads, excavation of soil, tunnelling); for the proof or follow-up of the stability, serviceability and safety of structures which may be influenced by geotechnical construction; for perpetuation of evidence; for the evaluation and control of geotechnical work.

Majapidamis- ja muud taolised elektriseadmed. Ohutus. Osa 1: Üldnõuded Household and similar electrical appliances - Safety - Part 1: General requirements

This European Standard deals with the safety of electrical appliances for household environment and commercial purposes, their rated voltage being not more than 250 V for single-phase and 480 V for others. NOTE 1 Battery-operated appliances and other d.c. supplied appliances are within the scope of this standard. NOTE Z1 Examples of appliance for household environment are appliances for typical housekeeping functions used in the household environment that may also be used by non expert users for typical housekeeping functions: - in shops, offices and other similar working environments; - in farm houses; - by clients in hotels, motels and other residential type environments; - in bed and breakfast type environments.

STANDARDIKAVANDITE ARVAMUSKÜSITLUS

Selleks, et tagada standardite vastuvõtmise, järgides konsensuse põhimõtteid, peab standardite vastuvõtmisele eelnema standardikavandite avalik arvamusküsitlus, milleks ettenähtud perioodi jooksul (reeglina 2 kuud) on ajast huvitatui võimalik tutvuda standardikavanditega, esitada kommentaare ning teha ettepanekuid parandusteks. Eriti on oodatud teave, kui rahvusvahelist või Euroopa standardikavandit ei peaks vastu võtma Eesti standardiks (vastuolu Eesti õigusaktidega, pole Eestis rakendatav jt põhjustel).

Arvamusküsitlusele esitatakse Euroopa ja rahvusvahelised standardikavandid, mis on kavas üle võtta Eesti standarditeks, ja Eesti algupärased standardikavandid ning algupäraste tehniliste spetsifikatsioonide ja juhendite kavandid.

Iga arvamusküsitlusel oleva kavandi kohta on esitatud järgnev informatsioon:

- Tähis
- Pealkiri
- Käsitletavalala
- Keel (en = inglise; et = eesti)
- Euroopa või rahvusvahelise alusdokumendi tähis, selle olemasolul
- Asendusseos, selle olemasolul
- Arvamuste esitamise tähtaeg

Kavanditega saab tutvuda ja kommentaare esitada Standardikeskuse veebilehel asuvas kommenteerimisportaalil:
<http://www.evs.ee/kommenteerimisportaal/>.

Igakuiselt uuendatav teave eestikeelsena avaldatavate Eesti standardite kohta, sh eeldatavad kommenteerimise ja avaldamise tähtpäevad, on leitav Standardikeskuse veebilehel avaldatavast standardimisprogrammist.

Beauty Salon Services - Requirements and recommendations for the provision of service

This European Standard provides requirements and recommendations for the provision of professional beauty salon services. These services relate to the delivery of beauty treatments regardless of where the service is delivered. This European Standard provides requirements and recommendations for the delivery of safe beauty treatments performed by a beauty therapist. Recommendations are provided regarding client management to ensure client safety regarding any beauty treatments. The delivery of beauty salon services is limited to the boundaries of the qualification of the individual beauty therapists obtained through an accredited education provider. Medical procedures including aesthetic surgical procedures and cosmetic injectable procedures including sclerotherapy are excluded from the scope. Hairdressing, barbering and tattoo services are also excluded from the scope.

Services for fire safety systems and security systems

This European Standard specifies the general requirements for the minimum quality level of service provided by companies as well as the competencies of their involved staff charged with the planning, design, installation, commissioning, verification, handover or maintenance of fire safety systems and/or security systems, regardless whether these services are provided on-site or remotely. This European Standard is applicable to services for fire safety systems and/or security systems, which are fire detection and fire alarm systems, security alarm systems including those parts of an alarm transmission system that the service provider has contractually accepted responsibility for (except social alarm systems, alarm receiving centres and the remaining parts of alarm transmission systems) and fixed fire fighting systems and combination of such systems. This standard applies regardless of project size or company structure or size.

prEN 16870

Water quality - Guidance standard on determining the hydromorphological conditions of lakes

This European Standard provides guidance on determining the degree of modification of lake hydromorphological features described in EN 16039. It enables consistent comparisons of hydromorphology between lakes within a country and between different countries in Europe, providing a method for broad based characterization across a wide spectrum of hydromorphological modification. Its primary aim is to assess 'departure from naturalness' for a given type of lake as a result of human pressures, and it suggests suitable sources of information that may contribute to characterizing the degree of modification of hydromorphological features. For wholly artificial lakes or reservoirs formed by damming rivers the aim is to assess the extent to which processes approximate to those in comparable natural water bodies. However, this standard does not replace methods that have been developed within particular countries for local assessment and reporting. Decisions on management for individual lakes require expert local knowledge and vary according to lake type.

FprEN ISO 13958

Concentrates for haemodialysis and related therapies (ISO 13958:2014)

This International Standard specifies minimum requirements for concentrates used for haemodialysis and related therapies. For the purpose of this International Standard, "concentrates" are a mixture of chemicals and water, or chemicals in the form of dry powder or other highly concentrated media, that are delivered to the end user to make dialysis fluid used to perform haemodialysis and related therapies. This International Standard is addressed to the manufacturer of such concentrates. In several instances in this International Standard, it became necessary to address the dialysis fluid, which is made by the end user, to help clarify the requirements for manufacturing concentrates. Because the manufacturer of the concentrate does not have control over the final dialysis fluid, any reference to dialysis fluid is for clarification and is not a requirement of the manufacturer. This International Standard includes concentrates in both liquid and powder forms. Also included are additives, also called spikes, which are chemicals that may be added to the concentrate to increase the concentration of one or more of the existing ions in the concentrate and thus in the final dialysis fluid. This International Standard also gives requirements for equipment used to mix acid and bicarbonate powders into concentrate at the user's facility. Concentrates prepared from prepackaged salts and water at a dialysis facility for use in that facility are excluded from the scope of this International Standard. Although references to dialysis fluid appear herein, this International Standard does not address dialysis fluid as made by the end user. Also excluded from the scope of this International Standard are requirements for the monitoring frequency of water purity used for the making of dialysis fluid by the dialysis facility. Recommendations from the technical committee responsible for this International Standard for monitoring water quality are contained in ISO 23500. This International Standard does not address bags of sterile dialysis fluid or sorbent dialysis fluid regeneration systems that regenerate and recirculate small volumes of the dialysis fluid.

Water for haemodialysis and related therapies (ISO 13959:2014)

This International Standard specifies minimum requirements for water to be used in haemodialysis and related therapies. This International Standard includes water to be used in the preparation of concentrates, dialysis fluids for haemodialysis, haemodiafiltration and haemofiltration, and for the reprocessing of haemodialysers. The operation of water treatment equipment and the final mixing of treated water with concentrates to produce dialysis fluid are excluded from this International Standard. Those operations are the sole responsibility of dialysis professionals. This International Standard does not apply to dialysis fluid regenerating systems.

Safety of machinery - General requirements for cableless control systems of machinery

This standard specifies requirements for the functionality and interfacing of cableless (for example, radio, infra-red) control systems that provide communication between operator control station(s) and the control system of a machine. Specific requirements are included for such operator control stations that are portable by the operator. NOTE 1 The part of the cableless control system that is used as an operator control station is sometimes referred to as the 'transmitter' and the part that interfaces with the machine control system is sometimes referred to as the 'receiver'. However, to take account of the possibility of bi-directional communication, this standard refers to these individual parts as the 'remote station' and the 'base station' respectively. This standard does not deal with cableless communication between parts of a machine(s) that are not operator control stations.

Portable aerosol dispenser for fire extinguishing purposes

This draft European Standard specifies the characteristics, performance and test methods for extinguishing aerosol dispensers, in accordance with Directive 75/324/EEC for fire extinguishing purposes. Requirements in this draft Standard are specified for products containing less than 1 kg or 1 l of extinguishing media, which can be expelled by the action of internal pressure and are intended to extinguish test fires of type A + B, or type A + F, or type A + B + F classes of EN 2. These extinguishing aerosol dispensers are intended to be used by untrained persons for domestic applications. They are not intended to be used on gas fires (class C) and metal fires (class D). Requirements are specified for minimum performance in Annex H for extinguishing test fires of type A, type B and type F classes of EN 2, as appropriate. Annex A gives the conditioning treatment to be applied to extinguishing aerosol dispensers prior to testing as described in Annex B to Annex K.

Water quality - Guidance standard on monitoring freshwater pearl mussel (*margaritifera margaritifera*) populations and their environment

This standard provides guidance on methods for monitoring freshwater pearl mussel populations and the environmental characteristics important for maintaining populations in favourable condition. The standard is based on best practice developed and used by Margaritifera experts in Europe, and describes approaches that individual countries have adopted for survey, data analysis and condition assessment. While it is recommended that the causes for pearl mussel decline should be urgently investigated, standard methods for restoring populations are beyond the scope of this document.

prEN 16870

Water quality - Guidance standard on determining the hydromorphological conditions of lakes

This European Standard provides guidance on determining the degree of modification of lake hydromorphological features described in EN 16039. It enables consistent comparisons of hydromorphology between lakes within a country and between different countries in Europe, providing a method for broad based characterization across a wide spectrum of hydromorphological modification. Its primary aim is to assess 'departure from naturalness' for a given type of lake as a result of human pressures, and it suggests suitable sources of information that may contribute to characterizing the degree of modification of hydromorphological features. For wholly artificial lakes or reservoirs formed by damming rivers the aim is to assess the extent to which processes approximate to those in comparable natural water bodies. However, this standard does not replace methods that have been developed within particular countries for local assessment and reporting. Decisions on management for individual lakes require expert local knowledge and vary according to lake type.

Electrostatics - Part 5-1: Protection of electronic devices from electrostatic phenomena - General requirements

Applies to activities that: manufacture, process, assemble, install, package, label, service, test, inspect, transport or otherwise handle electrical or electronic parts, assemblies and equipment susceptible to damage by electrostatic discharges greater than or equal to 100 V human body model (HBM). Provides the requirements for an ESD control program. The user should refer to IEC 61340-5-2 for guidance on the implementation of this standard. Does not apply to electrically initiated explosive devices, flammable liquids, gases and powders. The purpose of this standard is to provide the administrative and technical requirements for establishing, implementing and maintaining an ESD control program (hereinafter referred to as the 'program'). The main changes with respect to the previous edition are listed below: This version of IEC 61340-5-1 focuses on the requirements for an ESD control program. In addition, this version of IEC 61340-5-1 has been aligned with other major ESD control program standards used throughout the world.

Road traffic noise reducing devices - Test method for determining the acoustic performance - Part 1: Intrinsic characteristics of sound absorption under diffuse sound field conditions

This European Standard specifies the laboratory method for measuring the sound absorption performance of road traffic noise reducing devices in reverberant conditions. It covers the assessment of the intrinsic sound absorption performance of devices that can reasonably be assembled inside the testing facility described in EN ISO 354. This method is not intended for the determination of the intrinsic characteristics of sound absorption of noise reducing devices to be installed on roads in non-reverberant conditions. The test method in EN ISO 354 referred to in this European Standard excludes devices that act as weakly damped resonators. Some devices will depart significantly from these requirements and in these cases care is needed in interpreting the results.

Specification and qualification of welding procedures for metallic materials - Welding procedure test - Part 1: Arc and gas welding of steels and arc welding of nickel and nickel alloys (ISO/DIS 15614-1:2015)

This European Standard is part of a series of standards, details of this series are given in prEN ISO 15607, annex A. This standard specifies how a preliminary welding procedure specification is qualified by welding procedure tests. This standard defines the conditions for the execution of welding procedure tests and the range of qualification for welding procedures for all practical welding operations within the range of variables listed in clause 8. Tests shall be carried out in accordance with this standard. Additional tests may be required by application standards. This standard applies to the arc and gas welding of steels in all product forms and the arc welding of nickel and nickel alloys in all product forms. Arc and gas welding are covered by the following processes in accordance with EN ISO 4063: 111 - manual metal arc welding (metal-arc welding with covered electrode); 114 -

self-shielded tubular-cored arc welding; 12 - submerged arc welding; 131 - metal inert gas welding, MIG welding; 135 - metal active gas welding, MAG welding; 136 - tubular-cored metal arc welding with active gas shield; 137 - tubular-cored metal arc welding with inert gas shield; 141 - tungsten inert gas arc welding; TIG welding; 15 - plasma arc welding; 311 - oxy-acetylene welding. The principles of this European Standard may be applied to other fusion welding processes.

Wind turbines - Part 25-4: Communications for monitoring and control of wind power plants - Mapping to communication profile

IEC 61400-25-4:2008(E) specifies the specific mappings to protocol stacks encoding the messages required for the information exchange between a client and a remote server for data access and retrieval, device control, event reporting and logging, publisher/subscriber, self-description of devices (device data dictionary), data typing and discovery of data types. Covers several mappings, one of which shall be selected in order to be compliant with this part of IEC 61400-25. The IEC 61400-25 series is designed for a communication environment supported by a client-server model. Three areas are defined, that are modelled separately to ensure the scalability of implementations: wind power plant information model, information exchange model, and mapping of these two models to a standard communication profile. This publication is of high relevance for Smart Grid.

EN 61975:2010/FprA1:2015

High-voltage direct current (HVDC) installations - System tests

IEC 61975:2010(E) applies to system tests for high-voltage direct current (HVDC) installations which consist of a sending terminal and a receiving terminal, each connected to an a.c. system. The tests specified in this standard are based on bidirectional and bipolar high-voltage direct current (HVDC) installations which consist of a sending terminal and a receiving terminal, each connected to an a.c. system. The test requirements and acceptance criteria should be agreed for back-to-back installations, while multi-terminal systems and voltage sourced converters are not included in this standard. For monopolar HVDC installations, the standard applies except for bipolar tests. This standard only serves as a guideline to system tests for high-voltage direct current (HVDC) installations. The standard gives potential users guidance, regarding how to plan commissioning activities. The tests described in the guide may not be applicable to all projects, but represent a range of possible tests which should be considered. This edition cancels and replaces IEC/PAS 61975 published jointly in 2004 by IEC and CIGRÉ. It constitutes a technical revision incorporating engineering experience.

Electric cables - Accessories - Material characterization - Part 2: Fingerprinting for heat shrinkable components for low and medium voltage applications up to 20,8/36 (42) kV

This European Standard specifies the methods and requirements for fingerprinting (as defined in 3.13) of heat shrinkable components intended to be used for electrical insulation or electrical insulation and mechanical protection in cable accessories

for low and medium voltage, as defined in EN 50393, HD 629.1 and HD 629.2. Fingerprinting of materials does not have a mandatory link to type testing of accessories. It is regarded as a stand-alone test, but it may be carried out in combination with accessory type tests.

prEN 50655-3:2015

Electric cables - Accessories - Material characterization - Part 3: Fingerprinting for cold shrinkable components for low and medium voltage applications up to 20,8/36 (42) kV

This European Standard specifies the test methods and requirements for fingerprinting (as defined in 3.11) of cold shrinkable components intended to be used in cable accessories for low and medium voltage, as defined in EN 50393, HD 629.1 and HD 629.2. Fingerprinting testing of materials does not have a mandatory link to type testing of accessories. It is regarded as a stand-alone test, but it may be carried out in combination with the accessory type tests. Component basic functions can be conductive, stress control or stress grading, insulating, oil barrier, anti-tracking, external protection and sealing. Components are supplied as single layer items or as multi-layer items. Components are generally supplied pre-expanded or with a system allowing expansion prior to installation. NOTE Information on health and safety is given in Annex A.

31 ELEKTROONIKA

EN 61975:2010/FprA1:2015

High-voltage direct current (HVDC) installations - System tests

IEC 61975:2010(E) applies to system tests for high-voltage direct current (HVDC) installations which consist of a sending terminal and a receiving terminal, each connected to an a.c. system. The tests specified in this standard are based on bidirectional and bipolar high-voltage direct current (HVDC) installations which consist of a sending terminal and a receiving terminal, each connected to an a.c. system. The test requirements and acceptance criteria should be agreed for back-to-back installations, while multi-terminal systems and voltage sourced converters are not included in this standard. For monopolar HVDC installations, the standard applies except for bipolar tests. This standard only serves as a guideline to system tests for high-voltage direct current (HVDC) installations. The standard gives potential users guidance, regarding how to plan commissioning activities. The tests described in the guide may not be applicable to all projects, but represent a range of possible tests which should be considered. This edition cancels and replaces IEC/PAS 61975 published jointly in 2004 by IEC and CIGRÉ. It constitutes a technical revision incorporating engineering experience.

FprEN 60384-18:2015

Fixed capacitors for use in electronic equipment - Part 18: Sectional specification - Fixed aluminium electrolytic surface mount capacitors with solid (MnO₂) and non-solid electrolyte

IEC 60384-18:2007 applies to fixed aluminium electrolytic surface mount capacitors with solid (MnO₂) and non-solid electrolyte primarily intended for d.c. applications for use in electronic equipment. It prescribes preferred ratings and characteristics and to select from IEC 60384-1 the appropriate quality assessment procedures, tests and measuring methods and to give general performance requirements for this type of capacitor. Test severities and requirements prescribed in detail specifications referring to this sectional specification should be of equal or higher performance level, because lower performance levels are not permitted. This second edition cancels and replaces the first edition published in 1993 and its Amendment 1 (1998). This edition constitutes a minor revision related to tables, figures and references.

Electromagnetic compatibility - Requirements for household appliances, electric tools and similar apparatus - Part 1: Emission

This part of CISPR 14 specifies the requirements that apply to the emission of radio-frequency disturbances in the frequency range 9 kHz to 400 GHz from appliances, electric tools and similar apparatus as defined below, whether powered by AC, DC or battery. Within this standard wherever the term "equipment" is used it includes the more specific terms - "appliance", "household or similar appliances", "electric tool", "toys" and "apparatus".

Electromagnetic Compatibility of Multimedia equipment - Immunity Requirements

This International Standard applies to multimedia equipment (MME) as defined in 3.1.24 and having a rated AC or DC supply voltage not exceeding 600 V. MME within the scope of CISPR 20 or CISPR 24 is within the scope of this publication. MME with a broadcast reception function is within the scope of this publication, see Annex A. MME with non-broadcast wireless interfaces is also within the scope of this publication, however, compliance with the publication does not require the assessment of the performance of these interfaces.

EVS-EN 15839:2012/FprA1

Railway applications - Testing for the acceptance of running characteristics of railway vehicles - Freight wagons - Testing of running safety under longitudinal compressive forces

This European Standard defines the acceptance process to be followed by vehicles that are operated in trains capable of generating high longitudinal forces and that are susceptible, as a result of their design, to derailment as a result of being subjected to these forces. This European Standard applies to the following types of freight wagons equipped with standard ends as defined in this EN: — single wagons; — permanently coupled units with side buffers and screw couplers between the vehicles; — permanently coupled units with diagonal buffers with screw couplers between the vehicles; — articulated units with three 2-axle bogies; — low-floor wagons with eight or more axles (e.g. rolling road wagon 1). The following vehicles are not currently in the scope of this European Standard: — wagons that are not subjected to extensive longitudinal compressive forces due to their operational environment (as train composition, braking regime, track layout); — wagons with automatic couplers 2); — wagons with 3-axle bogies 3); — permanently coupled units with a bar coupler between the vehicles 4); — articulated wagons with more than three 2-axle bogies. Acceptance criteria and test conditions as well as conditions for the dispensation from tests are defined in this European Standard. This document applies principally to wagons which operate without restriction on standard gauge tracks in Europe (1 435 mm). NOTE The influence on railway systems using other gauges is not sufficiently understood to extend the scope of this document to gauges other than standard.

FprEN 16404

Railway applications - Re-railing and recovery requirements for railway vehicles

This draft European Standard is applicable to all railway vehicles that will operate under the Interoperability Directives taking into consideration the recommendations given in Annex F on the application of the standard (migration rule). Rolling stock of the following types are excluded from the scope of this draft European Standard: - metros, tramways, and other light rail vehicles; - vehicles for the operation of local, urban or suburban passenger services on networks that are functionally separate from the rest of the railway system; - vehicles exclusively used on privately owned railway infrastructure that exist solely for use by the owner for its own freight operations; - vehicles reserved for a strictly local, historical or touristic use. On track machines are in the scope of this draft European Standard only when in transport (running) configuration on their own rail wheels, either self-propelled or hauled. However, the requirements may be appropriate for other applications that have similar operational conditions. It specifies the principles and processes to be followed to achieve satisfactory arrangements for re-railing or recovery of railway vehicles and to validate the design against the relevant performance and safety requirements. The interface between the re-railing and recovery equipment and the vehicle structure is considered as the interface between the jack contact faces or the lifting bracket contact areas. The structural requirements for the vehicle structure are set out in EN 12663-1 and EN 12663-2. NOTE Railway vehicles that will operate under the Interoperability Directives correspond to the categories L, P-I, P-II, F-I and F-II defined in EN 12663-1.

FprEN 9131

Aerospace series - Quality Management Systems - Nonconformance Data Definition and Documentation

This standard defines the common nonconformance data definition and documentation that shall be exchanged between an internal/external supplier or sub-tier supplier, and the customer when informing about a nonconformity requiring formal decision. The requirements are applicable, partly or totally, when reporting a product nonconformity to the owner or operator, as user of the end item (e.g., engine, aircraft, spacecraft, helicopter), if specified by contract. The process of exchanging, coordinating, and approving nonconformance data varies with the multiple relationships and agreements among all parties concerned. The information provided by this standard forms guidelines for submitting and managing of data through accurate communication. The main objective is to provide the definition of a data set that can be integrated into any form of communication (e.g., electronic data interchange, submission of conventional paper forms). Reporting of nonconformance data, either electronically or conventionally on paper, is subject to the terms and conditions of the contract. This also includes, where applicable, data access under export control regulations.

prEN 12312-8

Aircraft ground support equipment - Specific requirements - Part 8: Maintenance stairs and platforms

1.1 General This European Standard specifies the technical requirements to minimize the hazards listed in Clause 4 which can arise during the commissioning, the operation and the maintenance of maintenance stairs and platforms when used as intended, including misuse reasonably foreseeable by the manufacturer, when carried out in accordance with the specifications given by the manufacturer or his authorized representative. It also takes into account some requirements recognized as essential by authorities, aircraft and ground support equipment (GSE) manufacturers as well as airlines and handling agencies. These machines are designed to be used as aircraft ground support equipment with the intended use to serve aircraft in outdoor conditions on the apron. They may also be used indoors at hangars. The use of such equipment for operations not in conjunction with aircraft is not defined as intended use therein. Due to the good operational conditions on the apron, deviations from some clauses of EN 280 were deemed acceptable. This European Standard applies to: a) self-propelled fixed or adjustable maintenance stairs and elevating platforms; b) towable maintenance stairs and platforms equipped with powered means, e.g. for height adjustment, stabilizers, designed for aircraft maintenance purposes including access to the aircraft. NOTE 1 Powered will be also understood as manual effort stored in springs or hydraulic accumulators, etc., the dangerous action of which can be produced or can continue after the manual effort has ceased or directly applied manual effort for lifting or lowering loads. NOTE 2 Those clauses of this standard that can apply may also be used as a guideline for the design of towable maintenance stairs and platforms without powered means. This European Standard does not apply to: c) maintenance docks either fixed to the ground or moveable only for docking procedure. d) ground support equipment specifically intended, built and equipped with a fluid system for aircraft de-icing and anti-icing (see EN 12312 6). NOTE 3 This does not prevent aircraft de-icers meeting the requirements of EN 12312-6 from being used as a means of access for aircraft maintenance, e.g. windshield cleaning, etc. e) mobile elevating work platforms (MEWP) used at the airports for purposes other than aircraft maintenance, e.g. buildings and facilities (see EN 280). This standard does not establish requirements for hazards caused by noise and vibration. NOTE 4 EN 1915-3 and EN 1915-4 provide the general GSE vibration and noise requirements. This European Standard does not deal with hazards in respect to a standard automotive chassis and from other vehicles on the apron. This part of EN 12312 is not applicable to maintenance stairs and platforms which are manufactured before the date of publication of this standard by CEN. This part of EN 12312 when used in conjunction with EN 1915 1, EN 1915 2, EN 1915 3 and EN 1915 4 provides the requirements for maintenance stairs and platforms.

1.2 Classification For the purposes of this European Standard, Mobile elevating work platforms (MEWPs) to be used for aircraft maintenance access are divided into two main groups A and B: a) Group A: MEWPs where the vertical projection of the centre of the platform area is always inside the tipping lines. NOTE See 5.2 hereafter for requirements applying to Group A MEWPs. b) Group B: MEWPs where the vertical projection of the centre of the platform area may be outside the tipping lines. NOTE See 5.3 hereafter for requirements applying to Group B MEWPs. c) In addition, Group C consists of maintenance access stairs, where persons are not elevated by the machine but climb a flight of steps. NOTE See 5.4 hereafter for requirements applying to Group C maintenance stairs. Relating to travelling, MEWPs are divided into three types: d) Type 1: Travelling is only allowed with the MEWP in its transport position;

prEN 14492-1

Cranes - Power driven winches and hoists - Part 1: Power driven winches

This draft European Standard is applicable to the design, information for use, maintenance and testing of power driven winches for which the prime mover is an electric motor, hydraulic motor, internal combustion motor or pneumatic motor. Winches are designed for the movement or manipulation of loads supported on level or inclined planes in situations where risks resulting from a failure of the winding mechanism or pulling medium are mitigated by external control measures. This draft European Standard is not applicable to devices which handle freely suspended loads, e.g. construction winches. Generally, a winch is used without any additional transport movement, except in cases where a winch is used on a stranded vehicle for self-recovery of the vehicle. This European Standard is applicable to the following types of winch: a) rope winches; b) belt winches, except steel belts used as pulling media; c) traction winches. These types of winches a) to c) also include the following specific applications: - vehicle recovery winches; - winches on boat trailers; - forestry winches; - winches for stationary offshore applications; - winches for drilling applications. NOTE Examples are shown in Annex A. This European Standard does not apply to: - power-driven hoists in accordance with EN 14492 2; - winches for seagoing vessels and mobile offshore units; - winches for the lifting of persons; - NGL building hoists in accordance with EN 14492 2; - winches for the handling of hot molten masses (risk covered by EN 14492 2). The significant hazards covered by this European Standard are identified in Clause 4. This European Standard does not specify additional requirements for hazards related to the use of winches in explosive atmospheres in underground works. This document applies to winches manufactured after approval by CEN with a transitional period of 2 years.

Garden equipment - Pedestrian controlled lawn aerators and scarifiers - Safety

This European Standard specifies safety requirements and their verification for the design and construction of pedestrian controlled integrally powered lawn aerators and scarifiers which are designed for re-generating lawns by, for instance, combing out grass, thatch and moss or cutting vertically into the lawn face using tines which rotate about a horizontal axis. It describes methods of elimination or reduction of hazards arising from their use. In addition, it specifies the type of information to be provided by the manufacturer on safe working practices. Throughout this document, the term "machine" applies to those machines known as aerators, scarifiers, corers, lawn rakes or grass rakes. It does not apply to: — aerators/scarifiers made from a machine falling within the scope of EN 709:1997+A4:2009 when fitted with an aerating/scarifying implement; — non-powered aerators; — vertical axis aerators; or — those aerators which cut into the soil by means of a reciprocating motion or by water pressure. The electrical aspects of mains operated machines are covered by EN 60335-1. The safety aspects of batteries other than batteries for starting the engine and the electrical safety aspects of battery powered lawn aerators and scarifiers are not covered by this document. It deals with all significant hazards, hazardous situations and events relevant to scarifiers and aerators, when they are used as intended and under the conditions foreseen by the manufacturer (see Clause 4). Environmental hazards and EMC have not been considered in this document. This document is not applicable to aerators/scarifiers which are manufactured before the date of its publication.

Solid biofuels - Determination of moisture content - Oven dry method - Part 3: Moisture in general analysis sample (ISO/CDIS 18134-3:2015)

This document describes the method of determining the moisture in the analysis sample by drying the sample in an oven. It is intended to be used for general analysis samples according to ISO WD XXXXX (14780). The method described in this document is applicable to all solid biofuels. Since biofuels in small particle size are very hygroscopic, their moisture content will vary with the change of humidity of the atmosphere and therefore, the moisture of the analyses sample should always be determined simultaneously when portions are weighed out for other analytical determinations, for example calorific value, carbon, nitrogen.

Conservation of cultural heritage - Guidelines for management of waterlogged wood on terrestrial sites of archaeological significance

This draft European Standard provides guidelines for safeguarding waterlogged wood on terrestrial sites of archaeological or historical significance. It deals with the protection of archaeological and historical waterlogged wood, from the time of exposure during and after excavation, until it reaches the conservation laboratory. The standard cannot be applied to the management of underwater sites, controlled reburial, in situ preservation, or long term post excavation storage. Composite artefacts of wood and other materials are also excluded from the standard.

Adhesives for load bearing timber structures other than phenolic and aminoplastic - Test methods - Part 1: Long-term tension load test perpendicular to the bond line at varying climate conditions with specimens perpendicular to the glue line (Glasshouse test)

This European Standard specifies a method of determining the ability of adhesive bonds to resist long-term sustained load applied vertical to the glue lines. It is applicable to adhesives used in load-bearing timber structures. It is suitable for the following applications: a) for assessing the compliance of adhesives according to EN 15425 and EN 16254; b) for assessing the suitability and quality of adhesives for load-bearing timber structures; c) for assessing the effect on the bond strength resulting from long-term sustained load at cyclic climate conditions. This method is intended primarily to obtain performance data for the classification of adhesives for load bearing timber structures according to their suitability for use in defined climatic environments. This method is not intended to provide data for structural design, and does not necessarily represent the performance of the bonded member in service.

Adhesives - One component polyurethane (PUR) for load-bearing timber structures - Classification and performance requirements

This European Standard establishes a classification for one component polyurethane (PUR) adhesives according to their suitability for use in load-bearing timber structures in defined climatic exposure conditions; it specifies performance requirements for such adhesives for the factory manufacture or factory like manufacturing of load-bearing timber structures only. It also classifies "adhesive lines" where all the products within the line have almost identical physical/chemical properties and gluing performance, but different reactivity. This European Standard only specifies the performance of adhesives for use in an environment corresponding to the defined conditions. The performance requirements of this European Standard apply to the adhesives only, not to the timber structure. This European Standard does not cover the performance of adhesives for on-site gluing (except for factory-like conditions) nor the production of wood-based panels, except solid wood panels, or modified and stabilized wood with considerably reduced swelling and shrinkage properties, e.g. such as acetylated wood, heat treated wood and polymer impregnated wood. This European Standard is primarily intended for the use of adhesive manufacturers and for the use in timber structures bonded with adhesives, to assess or control the quality of adhesives. The requirements apply to the type testing of the adhesives. Production control activities are outside the scope of this European Standard. Adhesives meeting the requirements of this European Standard are adequate for use in load-bearing timber structure, provided that the bonding process has been carried out according to an appropriate product standard.

Air filters for general ventilation - Part 3: Determination of the gravimetric efficiency and the airflow resistance versus the mass of test dust captured

This International Standard refers to particulate air filters for general ventilation having an initial efficiency of less than 99 % with respect to PM₁ values as defined in ISO 16890-1 Air filters for general ventilation - Part 1: Technical specifications, requirements and efficiency classification system based upon Particulate Matter (PM). Filters used in the ventilation of low-rise residential buildings or in portable room-air cleaners are excluded from the scope of this standard. This International standard describes the procedure to determine the gravimetric efficiency and the resistance to airflow for a given air cleaning device. After determination of the initial particle removal efficiency and the conditioned particle removal efficiency, the filter element is loaded with synthetic dust until its final test pressure drop is reached. The pressure drop curve versus the dust loading is recorded during the course of dust loading to determine the test dust holding capacity. The performance results obtained in accordance with this series of standards cannot by themselves be quantitatively applied to predict performance in service with regard to efficiency and lifetime. Other factors influencing performance to be taken into account are described in Annex A (informative).

prEN ISO 16890-4

Air filters for general ventilation - Part 4: Conditioning method to determine the minimum fractional test efficiency (ISO/DIS 16890-4:2015)

This International Standard refers to particulate air filters for general ventilation having an initial efficiency of less than 99 % with respect to 0,4 µm particles. Filters used in the ventilation of low-rise residential buildings or portable room-air cleaners are excluded from the scope of this standard. It describes the technical specifications, requirements and a method of conditioning (discharging) filters in an artificial aging step to provide information about the intensity of the electrostatic removal mechanism. The method is applicable for air flow rates between 0,25 m³/s (900 m³/h, 530 ft³/min) and 1,5 m³/s (5400 m³/h, 3178 ft³/min), referring to a test duct with a nominal face area of 0,61 m x 0,61 m. Filters in the higher end and above 99 % initial efficiency with respect to 0,4 µm particles are tested and classified according to other standards (see ISO 29463, part 1-5). Filters according to this series of standards are rated by their removal efficiency to PM10, PM2.5 and PM1 aerosol fractions. The particle collection efficiency of the filter element is measured as a function of the particle size in the range of 0,3 to 10 µm of the unloaded and unconditioned filter element. In a second step, a full filter element shall be conditioned (discharged) in an artificial aging step to provide information about the intensity of the electrostatic removal mechanism. The results from this second step are used to calculate the average efficiency in each of the PM10, PM2.5 and PM1 size ranges by weighting the fractional efficiency values according to the standardized and normalized particle size distribution of the related fraction of the ambient aerosol. This standardized and normalized particle size distribution is defined in this standard.

Vara hindamine. Osa 1: Hindamise mõisted ja põhimõtted

Property valuation - Part 1: Valuation Concepts and Principles

Standardisari EVS 875 käsitleb vara hindamist. Standardite kasutusalaks on vara hindamise ja hinnangute kasutamisega seotud tegevused, eeskõige laenutagatiste ja finantsaruandlusega seotud tegevused. Standardite kasutajateks on vara hindajad, kinnisvaraspetsialistik, ehituspetsialistik, keskkonnaspetsialistik, finantsaruandlusega tegelevad spetsialistik (raamatupidajad, audiitorid), krediidiiasutused, kõrgemad õppeasutused. Standardisari loob aluse vara hindamise ühtsele käsitledusele, rahuldades nii era- kui avaliku sektori vajadusi. See standard on standardisarja EVS 875 "Vara hindamine" sissejuhatav osa, milles antakse ülevaade hindamisega seotud mõistetest, põhimõtetest ja eesmärkidest, mis on olulised hindamise kui kutseala mõistmiseks ning standardite rakendamiseks. Tegemist on standardi EVS 875-1:2010 "Hindamise üldised alused" uustöötlusega.

93 RAJATISED

prEN 1793-1

Road traffic noise reducing devices - Test method for determining the acoustic performance - Part 1: Intrinsic characteristics of sound absorption under diffuse sound field conditions

This European Standard specifies the laboratory method for measuring the sound absorption performance of road traffic noise reducing devices in reverberant conditions. It covers the assessment of the intrinsic sound absorption performance of devices that can reasonably be assembled inside the testing facility described in EN ISO 354. This method is not intended for the determination of the intrinsic characteristics of sound absorption of noise reducing devices to be installed on roads in non-reverberant conditions. The test method in EN ISO 354 referred to in this European Standard excludes devices that act as weakly damped resonators. Some devices will depart significantly from these requirements and in these cases care is needed in interpreting the results.

FprEN 12520

Furniture - Strength, durability and safety - Requirements for domestic seating

This European standard specifies the minimum requirements for the safety, strength and durability of all types of domestic seating for adults. It does not apply to ranked seating, seating for non-domestic use, office work chairs, office visitors chairs, chairs for educational institutions, outdoor seating and to links for linked seating for which European Standards exist. It does not include requirements for the durability of upholstery materials, castors, reclining and tilting mechanisms and seat height adjustment mechanisms. The tests are based on use by persons weighing up to 110 kg. It does not include requirements for electrical safety. It does not include requirements for the resistance to ageing, degradation, flammability and ergonomics.

Furniture - Strength, durability and safety - Requirements for domestic tables

This European standard specifies the minimum requirements for the safety, strength and durability of all types of domestic tables for use by adults, including those with glass in their construction. It does not apply to office tables or desks, tables for non-domestic use, tables for educational institutions and outdoor tables for which EN standards exist. It does not apply to tables where the table top is not fixed to the understructure, i.e. when applying test 3, Table 2, the top becomes detached from the understructure. With the exception of stability tests, the standard does not provide assessment of the suitability of any storage features included in domestic tables. It does not include requirements for the durability of castors and height adjustment mechanisms. It does not include requirements for electrical safety. It does not include requirements for the resistance to ageing and degradation. Annex A (informative) contains a table top deflection test.

Conservation of cultural heritage - Guidelines for management of waterlogged wood on terrestrial sites of archaeological significance

This draft European Standard provides guidelines for safeguarding waterlogged wood on terrestrial sites of archaeological or historical significance. It deals with the protection of archaeological and historical waterlogged wood, from the time of exposure during and after excavation, until it reaches the conservation laboratory. The standard cannot be applied to the management of underwater sites, controlled reburial, in situ preservation, or long term post excavation storage. Composite artefacts of wood and other materials are also excluded from the standard.

TÖLKED KOMMENTEERIMISEL

Selles jaotises avaldame teavet eesti keelde tölgitavate Euroopa või rahvusvaheliste standardite ja standardilaadsete dokumentide kohta ja inglise keelde tölgitavate algupäraste Eesti standardite ja dokumentide kohta.

Tölgtega tutvumiseks võtta ühendust EVS-i standardiosakonnaga: standardiosakond@evs.ee, ostmiseks klienditeenindusega: standard@evs.ee.

Igakuiselt uuendatav teave eestikeelsena avaldatavate Eesti standardite kohta, sh eeldatavad kommenteerimise ja avaldamise tähtpäevad, on leitav Standardikeskuse veebilehel avaldatavast standardimisprogrammist.

EVS-EN 12101-8:2011

Suitsu ja kuumuse kontrollsüsteemid. Osa 8: Suitsutökkelapid

Selles Euroopa standardis käsitletakse suitsutökkelappe, mis on turule toodud ja mõeldud kasutamiseks osana rõhuvahesüsteemist või suitsu ja kuumuse eemaldamise süsteemist. Selles standardis täpsustatakse nõuded ja viidatakse katsemeetoditele, mis on kehtestatud suitsutökkelappidele ja nendega seotud komponentidele, nagu näiteks aktivaatorid, mis on mõeldud paigaldamiseks sellistes hoonesisestesse süsteemidesse. Lisaks kirjeldatakse seda, kuidas hinnata toodete vastavust käesoleva standardi nõuetele. Peale selle esitatakse teavet könealustele toodete märgistamise ning paigalduse ja hoolduse kohta. Standardis eristatakse kaht suitsutökkelappide kategooriat – üht tuletökkesektsooni teenindavad suitsutökkelapid ja mitut tuletökkesektsooni teenindavad tulekindlad suitsutökkelapid. Selles Euroopa standardis käsitletavad suitsutökkelapide saab paigaldada suitsu kontrollsüsteemi kanalitele või kanalite pinnale. Samuti saab neid paigaldada seina, põrandale või lae-/katuseelementide sisse või nende elementide pinnale. Korduste vältimiseks viidatakse mitmesugustele muudele standarditele. Seetõttu tuleb käesolevat standardit lugeda koos standarditega EN 13501-4, EN 1366-10 ja EN 1366-2, milles on esitatud üksikasjad katseajus läbi viidavate katsete kohta. Selles standardis ei käsitleta üksikasjalikult kahjulikke ja/või sõövitavaid mõjusid, mida võivad põhjustada õhus leiduvad protsessikemikaalid, mis tömmatakse tahtlikult või tahtmatult läbi süsteemi.

Bituumen ja bituumensideained. Kinemaatilise viskoossuse määramine

Käesolev Euroopa standard käsitleb meetodit bituumensideainete kinemaatilise viskoossuse määramiseks temperatuuridel 60 °C ja 135 °C ja vahemikus 6 mm²/s kuni 300 000 mm²/s. Teistel temperatuuridel määramine on võimalik, kui on teada kalibreerimistegurid. Bituumenemulsioidid selle meetodi käsitlusallasse ei kuulu. MÄRKUS See meetod ei ole mõeldud bituumensideainet sisaldavate emulsioidide jaoks. Meetodit võib küll kasutada emulsioidest stabiliseeritud ja/või taastatud sideainete puhul. Kui on teada katsetatava materjali tihedus või saab seda määräta, võib selle meetodi tulemusi kasutada ka dünaamilise viskoossuse arvutamiseks. HOIATUS — Käesoleva Euroopa standardi kasutamine võib kätkedama ohtlikke materjale, toiminguid ja seadmeid. Käesoleva Euroopa standardi eesmärgiks ei ole käsitleda kõiki selle kasutamisega seotud ohutusprobleeme. On käesoleva standardi kasutaja kohus teha kindlaks ohud ja hinnata riskid, mis on seotud selle katsemeetodi läbiviimisega ja rakendama piisavalt kontrollimeetmeid kaitsmaks igat katsetajat (ja keskkonda). See sisaldbas ajakohaste tervishoiu- ja ohutusnõuetekohased kehtestamist ning regulatiivpiirangute kasutamiseelset rakendamist.

EVS-EN 12596:2014

Bituumen ja bituumensideained. Dünaamilise viskoossuse määramine vaakumkapillaaris

See Euroopa standard käsitleb meetodit bituumensideainete dünaamilise viskoossuse määramiseks 60 °C juures vahemikus 0,0036 Pa·s kuni üle 580 000 Pa·s, kasutades vaakumkapillaarviskosimeetrit. Bituumenemulsioidid selle meetodi käsitlusallasse ei kuulu. Märkus 1: See meetod ei ole mõeldud bituumensideainet sisaldavate emulsioidide jaoks. Meetodit võib küll kasutada emulsioidest stabiliseeritud ja/või taastatud sideainete puhul. Märkus 2: Mõnede polümeermodifitseeritud bituumenite (PMB) viskoosne käitumine ei avaldu vaakumkapillaarviskosimeetris. Muud meetodid on selleks rohkem ajakohased. HOIATUS — Käesoleva Euroopa standardi kasutamine võib kätkedama ohtlikke materjale, toiminguid ja seadmeid. Käesoleva Euroopa standardi eesmärgiks ei ole käsitleda kõiki selle kasutamisega seotud ohutusprobleeme. On käesoleva standardi kasutaja kohus teha kindlaks ohud ja hinnata riskid, mis on seotud selle katsemeetodi läbiviimisega ja rakendama piisavalt kontrollimeetmeid kaitsmaks igat katsetajat (ja keskkonda). See sisaldbas ajakohaste tervishoiu- ja ohutusnõuetekohased kehtestamist ning regulatiivpiirangute kasutamiseelset rakendamist.

Bituumen ja bituumensideained. Terminoloogia

See standard määratleb terminid erinevat tüüpi tee või tööstus bituumenitele ja bituumenist saadud sideainetele. See standard käsitleb vaid CEN/TC 336 käsitlusallasse kuuluvaid materjale, st vaid naftast saadud materjale. See ei peaks seega laienema naftavälise päritoluga "organilistele" sideainetele nagu näiteks kivisöötörv ja selle derivaatidele ega looduslikele asfaltidele. Siiski on mõned terminid antud ka mõnedele välistatud materjalidele ja nendega seotud terminitele. Vastavad terminid on esitatud vaid

siis, kui need esinesid toote või protsessi määratluses ja nende määratlust oli vajalik mõistetavuse eesmärgil või mitmetähenduslikkuse vältimiseks. Selle Euroopa standardiga hõlmatud materjalid on näidatud joonisel 1. MÄRKUS See joonis näitab ka selget erinevust CEN/TC 336 käsitlusaslas olevate ja sinna mittekuuluvate materjalide vahel

Ehituslikud soojusisolatsioonitooted. Tööstuslikult valmistatud paisutatud polüstüreenist tooted (EPS). Spetsifikatsioon

See standard esitab nõuded hoonete soojustamiseks kasutatavatele tööstuslikult valmistatud jäигa või painduva kattekihiga või ilma kattekihita paisutatud polüstüreenist toodetele. Tooted valmistatakse kas plaatidena, rullikujulisena või mõnel muul kujul (tasapinnalised, koonilised, punniga, soovdatud, sulunditega, profileeritud jne). Selles standardis käsitletavad tooteid kasutatakse ka heliosolatsioonina, samuti tööstuslikult valmistatud soojustussüsteemides ning liitpaneelides; neid tooteid sisaldavate süsteemide toimivust selles standardis ei käsitleta. See standard kirjeldab toodete omadusi ja esitab katsetamise, vastavushindamise, märgistamise ja tähistamise protseduurid. Standard ei spetsifitseeri antud omaduse nõutavat taset, mille saavutamine näitaks toote sobivust konkreetseks kasutusotstarbeks. Konkreetsesse kasutusotstarbe puhul nõutavad tasemed ja klassid on toodud õigusaktides või sobivates standardites. Tooted, mille deklareeritud soojustakistus on alla $0,25 \text{ m}^2\text{K/W}$ või deklareeritud soojuserijuhtivus temperatuuril 10°C on suurem kui $0,060 \text{ W/(m}^\circ\text{K)}$, ei kuulu selle standardi käsitlusasse. Selle standardi käsitlusasse ei kuulu kasutuskohas valmistatavad isolatsioonitooted (kaetud standarditega FprEN 16025-1 ja -2), tehnoseadmete ja tööstuspaigaldiste isoleerimiseks ettenähtud tooted (kaetud standardiga EN 14309), rajatistes kasutamiseks ettenähtud tooted (kaetud standardiga EN 14933) ja põrandate tala-plokk süsteemides kasutamiseks ettenähtud tooted (kaetud standardiga EN 15037-4).

EVS-EN 14509:2013

Isekandvad kahepoolsete katteplekkidega sändvitšpaneelid. Tööstuslikult valmistatud tooted. Spetsifikatsioonid

See Euroopa standard spetsifitseerib nõuded tehases valmistatud isekandvatele kahelt poolt plekiga kaetud sändvitšüpi soojustuspaneelidele, mis on ette nähtud paigaldamiseks sulund- või ülekattega pikiliidetega ühendatavate üksikelementide ja järgmistes rakendustes: a) katused ja katuskatted; b) välisseinad ja fassaadikatted; c) hoonekarbi seinad (kaasa arvatud vaheseinad) ja laed. See Euroopa standard hõlmab järgmisi südamiku soojustusmaterjale: jäik polüuretaan, vaht-polüstüreen, ekstruuditud vahtpolüstüreen, fenovaht, klaasvill ja mineraalvill. MÄRKUS Polüuretaan (PUR) sisaldb polüisotsüaanureetaani (PIR). See Euroopa standard hõlmab ka neid paneele, mille servad on valmistatud paneeli südamiku põhilisest soojustusmaterjalist erinevatest materjalidest. See Euroopa standard hõlmab ka külmhoonetes kasutatavaid paneele. Neid paneele, mida turustatakse kui külmutusladuses, hoonetes ja/või hoonekarbikomplektides kasutatavaid komponente käsitleb ETA-Guideline 021 "Cold storage premises kits" ("Külmhoonete ehituskomplektid"). See Euroopa standard ei hõlma: i. sändvitšpaneeli, mille südamiku soojustuse soojuserijuhtivus temperatuuril 10°C on suurem kui $0,06 \text{ W/m}\cdot\text{K}$; ii. tooteid, mille südamik koosneb kahest või enamast erineva soojustusmaterjali selgesti eristatavast kihist (mitmekihilised tooted); iii. perforeeritud katteplekiga/-plekkidega paneeli. iv. kumeraid paneeli.

Täispuidust seina- ja laevooderdis. Omadused, vastavushindamine ja märgistus

See Euroopa standard määrab kindlaks asjakohased omadused ja sobivad katsemeetodid nende omaduste määramiseks seina- ja laevooderdiseks (kaasa arvatud välisvooderdiseks) kastatavatele täispuittoodetele: - seina- ja laevooderdis sisetingimustes kasutamiseks; - seina- ja laevooderdis välistingimustes kasutamiseks. Standard määrab kindlaks nende toodete vastavushindamise ja märgistamise nõuded. See Euroopa standard ei hõlma jälkuselementidena kasutamiseks ettenähtud plaate. See Euroopa standard ei hõlma ripplagede puitvooderdist. See Euroopa standard ei hõlma immutamise, pinnakatmise või modifitseerimise protsesse. See Euroopa standard ei hõlma kihtpuidust valmistatud tooteid. See Euroopa standard hõlmab immutatud, immutamata ja kaetud pinnaga tooteid, kaasa arvatud neid, mis on termiliselt või keemiliselt modifitseeritud puidust, samuti sõrmjätkatud ja servliimitud tooteid. MÄRKUS Pinnakatmise ja immutamise eeskirju võib leida kasutuskohas kehtivatest dokumentitest. See Euroopa standard hõlmab tooteid, mis on vastavuses standarditega EN14519, EN 15146 ja EN 14951 ja teisi täispuittoodeid, mis on valmistatud kasutamiseks seina- ja laevooderdises.

EVS-EN 15437-1:2009

Raudteealased rakendused. Teljelaagripukside seisundi jälgimine. Ühilguvus ja projekteerimisnõuded. Osa 1: Veeremi teljelaagrite ülekuumenemise avastamise seaded ja veeremi teljelaagripuks

Käesolev standardi EN15437 osa kirjeldab teeäärse teljelaagrite ülekuumenemise seiresüsteemi (TÜS) ja veeremi vahelise ühilduvuse miinimumnõudeid, mis ühtivad Euroopa koostoime tagamise direktiivide nõuetega ning tagavad vähima veeremi ja infrastruktuuri vahelise ühilduvuse olemasolu. Ühilduvuse miinimumnõuded rakenduvad: a) Euroopa standardrõöpmelaiusega (1435 mm) veeremile; b) Väliste teljelaagritega veeremüksustele. MÄRKUS: Sisemiste teljelaagritega veeremüksuste telgede konstruktsoon peab vastama punkti 5.2 märkuses 2 esitatud nõuetele. a) Veeremile max. kiirusega kuni ja kaasa arvatud 250 km/h MÄRKUS 1 Tegemist on vastavalt veeremi KTKs defineeritule tavarraudtee- ja klassi 2 kiirraudteeveeremiga. MÄRKUS 2 Koostoimevõimelisele veeremile konstruktivse kiirusega üle 250 km/h (klassi 1 kiirraudteeveeremile) on kohustuslik pardal asuvate teljelaagri seisundi seiresüsteemide olemasolu. Nõuded nimetatud süsteemidele on kirjeldatud käesoleva standardi praegu koostamisel olevas osas 2. MÄRKUS 3 Koostoimevõimeline veerem konstruktivse kiirusega üle 250 km/h (klassi 1 kiirraudteeveerem) ei kuulu käesoleva standardi skoopi. Samas, kui on nõutav klassi 1 kiirraudteeveeremi kontrollimine TÜS poolt, peab nende kontrollala ühilduma käesolevas standardis kirjeldatuga, välja arvatud siis, kui on kirjeldatud teisiti. b) TÜSid, mis on nõutavad tava- ja klassi 2 kiirraudteeveeremi seisundi kontrolliks. Veeremi nõuded ühilduvuse tagamiseks on kirjeldatud jaotises 5 ja TÜS nõuded ühilduvuse tagamiseks jaotises 6. Käesoleva osa (osa 1) käsitusala ei hõlma: — Ratta ülekuumenemise seiresüsteeme (RÜT). Samas on RÜT-d sageli üles seatud koostoimes TÜS-iga rajamaks kahepoolset seiresüsteemi. Käesolev standard ei välista sellist kombinatsiooni; — Meetodeid, kuidas TÜS möödab temperatuuri ja tuvastab teljekoostu asendit. See on üksiku süsteemi konstruktsooni osa ning ei kuulu standardis kirjeldatud funktsionaalsuse nõuete hulka; — TÜS poolt tuvastatud ja edastatud info käitusnõudeid; — TÜS hooldusnõudeid;

EVS-EN 50130-4:2011+A1:2014

Alarmisüsteemid. Osa 4: Elektromagnetiline ühilduvus. Tooteperekonna standard: Häiringukindluse nõuded tulekahju-, sissemurde- ja kallaletungialarmisüsteemide, videovalvestüsteemide, juurdepääsukontrollisüsteemide ja personaal-appikutsesüsteemide komponentidele

Antud tooteperekonna EMÜ taluvuse nõuete standard kehtib järgmistele häiresüsteemide komponentidele, mis on mõeldud kasutamiseks elu-, kommerts-, kergetööstus- ja tööstuskeskkondades hoonete sisemuses ning ümbruses: – juurdepääsu kontrolli süsteemid, turvarakendusteks; – häire ülekande süsteemid 1); – suletud televisioonisüsteemid, CCTV süsteemid, turvarakendusteks; – Tulekahju avastamise ja tulekahjuhäire süsteemid; – personaalappikute süsteemid; – sissetungi alarmi süsteemid; – sotsiaalalarmi süsteemid; Teostatavad katsed ning nende raskusaste on sama nii sise- kui ka välistingimustes kasutatavatele paiksetele, teisaldatavatele kui ka kantavatele seadmetele. Toodud nivoor ei kohaldu ääruslikeks juhtumiteks, mis võivad harva esineda mistahes paigas või eri paikades võimsate kiirgusallikate lähedal (nt radarid). Antud standardi käsitlusallasse kuuluv seadmestik peab olema kavandatud selliselt, et see toimiks rahulda valt elamu-, äri- ning kergetööstuse ning tööstuslikus elektromagnetilises keskkonnas. See tähendab seda, et seadmed peaks olema võimalised eesmärgipäraselt töötama EMÜ häiringutasemetel, mis on esitatud avalike madalpinge toitesüsteemide standardis EN 61000-2-2. Selles standardis on kirjeldatud ainult kõige kriitilisemaid häiringunähtusi. Seadmete jaoks, mis kasutavad sideks raadiokanaleid, toitevõrgu pealstatud signaale või avalikku telefonivõrku, võib kohaldada lisanoodeid, mis tulenevad teistest vastava valdkonna spetsifilistest standarditest. See standard ei sätesta põhilisi ohutusnõudeid nagu kaitse elektrilökide eest, ohtlike toimingute, isolatsiooni koordinatsiooni ja sellega seotud isolatsiooni tugevuse katseid. See standard ei hõlma EMÜ emissiooniga seotud nõudeid. See osa on kaetud teiste asjakohaste standarditega. 1) Välja arvatud seadmed, mis on üldkasutatavate sidevõrkude osad.

Kommmenteerimise lõppkuupäev: 08.07.2015

EVS-EN 60034-30-1:2014

Pörlevad elektrimasinad. Osa 30-1: Võrgutoiteliste vahelduvvoolumootorite tõhususklassid (IE-kood)

IEC 60034 käesolev osa sätestab energiatõhususklassid ühekiiruseliste elektrimootoritele, mis vastavad standardile IEC 60034-1 või IEC 60079-0 ja on ette nähtud talitllemiseks siinuseisel toitepingel ning on järgmiste omadustega: • tunnusvõimsus PN on 0,12 kW kuni 1000 kW; • tunnuspinge UN on 50 V kuni 1 kV; • pooluste arv on 2, 4, 6 või 8; • on võimalised talitlema kestvalt tunnusvõimsusel, kusjuures nende ületemperatuur ja isolatsiooni sättestatud temperatuuriklass jääävad ettenähtud piiridesse; MÄRKUS 1 Enamik selles standardis käsitletavatest mootoritest on ette nähtud nimitalitusviisile S1 (kestetalitus). Mõned mootorid aga, mis on ette nähtud muudele talitusviisidele, on samuti võimalised talitlema kestvalt nende tunnusvõimsusel; standard käsitleb ka neid mootoreid. • on tähistatud vastavalt mingile ümbrustemperatuurile vahemikus -20 °C kuni +60 °C; MÄRKUS 2 Ettenähtud tõhusus ja tõhususklassid pöhinevad vastavalt standardile IEC 60034-2-1 ümbrustemperatuuril +25 °C. MÄRKUS 3 Mootorid, mille ettenähtud ümbrustemperatuur on väljaspool vahemikku -20 °C kuni +60 °C, loetakse eriehitusega mootoriteks ja on käesolevast standardist seetõttu välja jäetud. MÄRKUS 4 Suitsueraldusmootorid temperatuuriklassiga kuni 400 °C on käesolevas standardis arvesse võetud. • on tähistatud kõrguse järgi merepiinast kuni 4000 m. MÄRKUS 5 Ettenähtud tõhusus ja tõhususklassid pöhinevad kõrgusele merepiinast kuni 1000 m. See standard kehtestab tõhususe piirväärtuse kogumi, mis pöhineb sagedusel, pooluste arvul ja mootori võimsusel. Ei arvestata erinevusi, mis on tingitud mootori valmistamisviisist, toitepingest ja tugevdatud isolatsioonist ja mis on spetsiaalselt ette nähtud talitluseks koos muunduriga, kuna mitte kõik selliste mootorite valmistamisviisid ei pruugi olla võimalised saavutama kõrgemaid tõhususklassi (vt tabel 1). See teeb mootorite erisugused valmistamisviisid täielikult võrreldavateks, arvestades nende energiatõhususe saavutamise võimalusi. MÄRKUS 6 Reguleerivad organisatsioonid peavad arvestama ülaltoodud piiranguid rahvuslike minimaalsete energiatõhususstandardite väljatöötamisel, arvestades mootorite erilike. See standard ei kehti jõuajamisüsteemide tõhususe kohta. Eriti ei kehti see toitepinge harmoonilistest tingitud kadude kohta mootoris, kadude kohta kaablites, filtrites ja sagedusmuunduris. Standard kehtib mootorite kohta, mille äärikut, käppade ja/või völli mõõtmel erinevad standardis IEC 60072-1 esitatust. Standard kehtib reduktormootorite kohta, sealhulgas mittestandardsete vöölide ja äärikutega mootorite kohta. Standardist on välja jäetud • kümnevõi enampooluselised mitmekiiruselised mootorid; • mehaaniliste kommutaatoritega (nt alalisvoolu-) mootorid; • mootorid, mis on täielikult ühitatud töomasinaga (nt pumbaga, ventilaatoriga või kompressoriga) ega võimalda seetõttu katsetamist töomasinast eraldi, isegi kui on ette nähtud ajutised otsakilbid ja ajami otsalaagrid. See tähendab, et a) mootoril peab olema ühiseid komponente (peale ühenduselementide nagu nt poltide) käitatava masinaga (nt võli või ümbris) ja b) mootor ei tohi olla sellise ehitusega, et see võimaldaks mootorit käitatavast masinast eraldada kui tervikmootorit, mis võib talitleda käitatavast masinast eraldi. Seega peab mootor, mis on sellest standardist välja jäetud, jäädma pärast eraldamisprotsessi mittetalitlevaks. (TEAO, IC418) Õhu käes olevad täielikult suletud masinad, s.t täielikult suletud välispinnajahutusega masinad, mis on ette nähtud väliseks jahutamiseks väljaspool masinat paikneva ventilaatori abil, on selle standardiga haaratud. Selliste mootorite tõhususe katsetamise võib sooritada ventilaatori eemaldamisega ja jahutamisega välise puhuri abil, mille õhuvoor on samasugune nagu

originaalventilaatoril. • mootorid, mis on varustatud külgeehitatud muunduritega, kui mootorit ei saa katsetada muundurist eraldi. Kompaktajami energiatõhususklassifikatsioon peab põhinema komplekttootel (jõuajamisüsteemil) ja tuleb määratleda omaette standardis. MÄRKUS 7 Mootor ei ole välja jäetud, kui mootorit ja muundurit saab teineteisest eraldada, kusjuures mootorit saab katsetada muundurist sõltumatult. • pidurmootorid, kui pidur on mootorisesse sisse ehitatud ja kui seda ei saa mootori tõhususe katsetamise ajal välja võtta ega eraldi energiaallikast toita. MÄRKUS 8 Pidurmootorid, mille pidurimagnet on ehitatud mootori äärikusse, on selle standardiga haaratud, kui mootori tõhusust saab katsetada ilma kadudeta piduris (nt piduri eemaldamise teel või piduri mähise toitmise teel eraldi energiaallikast). Kui tootja teatel on mootor kas piduriga või ilma pidurita ühesuguse ehitusega, võib mootori tõhususe katsetamine toimuda ilma pidurita. Määratletud tõhusust võib seejärel kasutada nii mootori kui ka pidurmootori hindamisel. • sukeldatavad mootorid, mis on spetsiaalselt ette nähtud täielikuks sukeldamiseks vedelikku; • suitsueraldusmootorid temperatuuriklassiga üle 400 °C.

Elektrilised meditsiiniseadmed. Osa 2-43: Erinõuded invasiivprotseduuride röntgenseadmete esmasele ohutusele ja olulistele toimimisnäitajatele

Kohaldatav on põhistanndari IEC 60601-1:2005 "Medical electrical equipment – Part 1: General requirements for basic safety and essential performance" jaotis 1 järgmiste erisustega: 201.1.1 *Käsitlusala Asendus: Käesolev rahvusvaheline standard on kohaldatav selliste RÖNTGENSEADMETE ESMASELE OHUTUSELE ja OLULISTELE TOIMIMISNÄITAJATELE, mis on TOOTJA poolt kinnitatud olema sobilikud kasutamiseks FLUOROSKOOPILISELT JUHITAVATES INVASIIVPROTSEDUURIDES, ja mida edaspidi nimetatakse MENETLUSRÖNTGENSEADMETEKS. Selle käsitluslast on välja jäetud: – KIIRITUSRAVIS kasutatavad seadmed; – KOMPUUTERTOMOGRAAFIA seadmed; – PATSIENDI kehasse sisestamiseks möeldud TARVIKUD; – mammograafilised RÖNTGENSEADMED; – dental RÖNTGENSEADMED. 201.1.2 Eesmärk Asendus: Käesoleva eristandardi eesmärgiks on: – sätestada ESMASE OHUTUSE ja OLULISTE TOIMIMISNÄITAJATE erinõuded FLUOROSKOOPILISELT JUHITAVATES INVASIIVPROTSEDUURIDES kasutatavate RÖNTGENSEADMETE, mis on määratletud alajaotises 201.3.203, projekteerimisele ja valmistamisele. – täpsustada teave, mis tuleb selle MENETLUSRÖNTGENSEADMEGA tagada abiks VASTUTAVALE ORGANISATSIOONILE või OPERATORILE nendest protseduuridest tuleneva KIIRGUSRISKI ja seadme törkeRISKI, mis võib kahjustada PATSIENTI või personali, haldamisel. 201.1.3 Kollateraalstandardid Täiendus: Käesolevas eristandardis viidatakse ajakohastele kollateraalstandarditele, mis on loetletud põhistanndardi jaotistes 2 ja käesoleva eristandardi jaotises 201.2. IEC 60601-1-2 ja IEC 60601-1-3 on kohaldatavad nii, nagu on muudetud vastavalt jaotistes 202 ja 203. IEC 60601-1-8 ja IEC 60601-1-10 ei ole kohaldatavad. Kõik muud standardiseerias IEC 60601-1 välja antud kollateraalstandardid on kohaldatavad avaldatud tingimustel. 201.1.4 Eristandardid Asendus: Standardiseeria IEC 60601 eristandardid võivad muuta, asendada või tühistada põhistanndardis või kollateraalstandardites sätestatud nõudeid käsitletavate EM-SEADMETE liigi kohaselt, samuti lisada täiendavaid nõudeid ESMASELE OHUTUSELE ja OLULISTELE TOIMIMISNÄITAJATELE. Eristandardi nõuded on põhistanndardi suhtes prioriteetsed. Lühidalt, käesolevas eristandardis osutatakse standardile IEC 60601-1 kui põhistanndardile. Kollateraalstandarditele osutatakse nende dokumendinumbrite järgi.

Keevitus. Terase, nikli, titaani ja nende sulamite sulakeevitusliited (välja arvatud kiirguskeevituse meetodid). Kvaliteeditasemed keevitusdefektide järgi

Standard esitab kvaliteeditasemed keevitusdefektide järgi sulakeevitatud keevisiidetes (välja arvatud kiirguskeevitus) kõikidele teraste, nikli, titaani tüüpidele ning nende sulamitele. Seda rakendatakse materjali paksustel ≥ 0.5 mm. Standard hõlmab täielikult läbiskeevitatud põkkõmblusi ja nurkõmblusi. Standardi põhimõtted võib samuti kasutada osalise läbiskeevitusega põkkõmbluste

jaoks. (Kiirguskeevituse meetoditega valmistatud keevisliidete kvaliteeditasemed on toodud standardis ISO 13919-1). Välja pakutud kolm kvaliteeditaset on antud selliselt, et need hõlmavad laia keevitustoodete valmistusala. Kvaliteeditasemed on tähistatud tähtedega B, C ja D. Kvaliteeditase B vastab lõpetatud keevisõmpluse kõige kõrgematele nõuetele Arvesse on võetud erinevat tüüpi koormusi, nt staatilist koormust, termilist koormust, korrosionkoormust, röhukoormust. Lisajuhised väsimuskoomuste korral on toodud lisas C. Kvaliteeditasemed viitavad tootmisele ja heale töömeisterlikkusele. Standard laieneb: a) mittelegeerterastele ja legeerterastele; b) niklile ja nikli sulamitele; c) titaanile ja titaani sulamitele; d) käsitsi, mehaniseeritud ja automaatkeevitusele; e) köigile keevitusasenditele; f) köikidele keevisõmpluse tüüpidele, nt pökkömplustele, nurkõmplustele ja hargmikliidetele, ja g) järgmistele keevitusprotsessidele ja alamprotsessidele, nagu on definineeritud standardis ISO 4063: — 11 metallkaarkeevitus ilma kaitsegaasita; — 12 räbusikaarkeevitus, kaarkeevitus räbusit all; — 13 kaitsegaaskaarkeevitus; — 14 kaitsegaaskaarkeevitus sulamatu volframelektroodiga ; — 15 plasmakaarkeevitus; — 31 hapnik-atsetüleengeevitus, gaaskeeveitus(ainult terastele). Standard ei käsitle keevitamise metallurgilisi aspekte, nagu metallitera suurus ja kõvadus.

EVS-EN ISO 9308-1:2014

Vee kvaliteet. Escherichia coli ja coli-laadsete bakterite arvukuse määramine. Osa 1:

Membraanfiltratsiooni meetod, sobib kasutamiseks madala bakteriaalse fooniga vee analüüsimeiseks

Standardi ISO 9308 esimene osa spetsifitseerib meetodi Escherichia coli (E. coli) ja coli-laadsete bakterite arvukuse määramiseks. Meetodi põhietaapid on proovi filtreerimine läbi membraanfiltrti, membraanfiltrile kogutud bakterite kasvatamine koos filtriga coli-bakterite kromogeensöötmel, filtrile kasvanud bakterikolooniate loendus ning lõptulemisse arvutamine. Kuna üldjuhul on agarsöötmete selektiivsus madal, siis võib bakteririkkal pinnavee ja madalate kaevude vee E. coli ja coli-laadsete bakterite sisalduse määramist häirida taustakasv. Seega ei sobi käesolev meetod väga kõrge bakterisisaldusega vee analüüsimeiseks. Standardi ISO 9308 esimene osa sobib eelkõige vähese bakterisisaldusega vee, kolooniate arvukus kromogeensöötmel kuni 100, analüüsimeiseks. Sellisteks veteks on joogivesi, desinfitseeritud basseinivesi või veepuhastusjaamas puhastusprotsessi läbinud joogivesi. Mõned E. coli tüvesid, mis on β-D-glükuronidaas-negatiivne nagu Escherichia coli O157, ei arvestata E. coli hulka. Kuna Escherichia coli O157 on β-D-galaktosidaas-positiivne loetakse see kromogeensöötmel kasvatamisel coli-laadseks bakteriks.

prEVS-EN 61439-5

Madalpingelised aparaadikoosted. Osa 5: Avalike elektrivõrkude elektrijaotuskoosted

Käesolev standardi IEC 61439 osa kehtestab erinõuded avalike elektrivõrkude elektrijaotuskoostetele (jaotuskoostetele). Jaotuskoosted peavad vastama järgmistele kriteeriumidele: - kasutatakse elektrienergia jaotamiseks kolmefaasilistes süsteemides nimivahelduvpingega mitte üle 1000 V (vt tüüpilise jaotusvõrgu kujutis joonisel 101); - on kohtkindlad; - lahtised koosted ei ole käsitletavad käesoleva standardiga; - sobivad paigaldamiseks kohtades, kuhu on nende kasutamiseks juurdepääs ainult elektrialaisikutel, kuid välisjaotuskoosted võivad siiski olla paigaldatud ka kohtades, mis on juurdepääsetavad tavaasikutele; - on sise- või väliskasutuseks. Käesoleva standardi eesmärk on sõnastada jaotuskoostete määratlused ning sätestada nende talitustingimused, ehitusnõuded, tehnilised omadused ja katsetused. Võrgu parameetrid võivad nõuda katsetusi kõrgematel sooritustasemetel. Jaotuskoosted võivad samuti sisalda elektrienergia jaotusega seotud juhtimis- ja/või signaalisaatniseadmeid. Käesolev standard kehtib kõikide jaotuskoostete kohta, mis on toodetud nii ainuprojekti põhjal kui ka täielikult standardiseeritud masstoodanguna. Tootmine ja/või montaaž võib olla tehtud mitte üksnes algupärase tootja poolt (vt IEC 61439-1:2011 jaotis 3.10.1) Käesolev standard ei kehti üksikseadmete ja ise koostatud osiste kohta nagu mootorstarterid, sulavkaitse-lülitud, elektroonikaseadmostik jne, mis rahuldavad vastavate toodete standardeid. Käesolev standard ei kehti eritüüpiliste koostete kohta, mis on käsitletud standardi IEC 61439 sarjade teistes osades.

Elektrilised meditsiiniseadmed. Elektriliste meditsiiniseadmete korraline kontroll ja remondijärgne kontroll

Seda rahvusvahelist standardit kohaldatakse standardile IEC 60601-1:1988 (teine väljaanne) ja tema muudatustele ning IEC 60601-1: 2005 (kolmas väljaanne) ja tema muudatustele vastavate ELEKTRILISTE MEDITSIINISEADMETE ja ELEKTRILISTE MEDITSIINISÜSTEEMIDE, edaspidi EM-SEADMED ja EM-SÜSTEEMID, või nende seadmete või süsteemide osade kontrollimiseks enne KASUTUSELEVÖTTU, TEHNILISE HOOLDUSE, ÜLEVAATUSE, TEENINDUSTÖÖDE ajal ja

REMONDIjärgselt või KORRALISEL KONTROLLIL, et hinnata EM-SEADMETE või EM-SÜSTEEMIDE või nende osade ohutust. Seadmete jaoks, mis ei ole ehitatud standardile IEC 60601-1 vastavalt, võib neid nõudeid kasutada, võttes arvesse seadmete projekteerimise ohutusnorme ja kasutusjuhendis olevat teavet. See standard sisaldab tabelleid piirmääradega standardi IEC 60601-1 eri väljaannetest. Selle standardi eesmärk on mõõtemeetodite rakendamine sõltumatult väljaandest, millele vastavalt EM-SEADMED või EM-SÜSTEEMID on projekteeritud. See standard sisaldab: — „üldnõudeid“, mis sisaldavad üldist laadi jaotisi, ja — „erinõudeid“, edasised jaotised, mis käsitlevad EM-SEADMETE ja EM-SÜSTEEMIDE eritüüpe ja mida rakendatakse koos „Üldnõuetega“. MÄRKUS Sellel etapil ei ole erinõudeid. See standard ei ole sobilik hindamaks, kas EM-SEADMED või EM-SÜSTEEMID või mis tahes teised seadmed järgivad oma konstruktsiooni poolest asjakohaseid standardeid. See standard ei ole kohaldatav EM-SÜSTEEMIDE koostamiseks. EM-SÜSTEEMIDE koostamiseks vaata standardi IEC 60601-1:2005 + IEC 60601-1:2005/AMD1:2012 peatükki 16. See standard ei määratle nõudeid EM-SEADMETE või EM-SÜSTEEMIDE REMONDILE, osade vahetamisele ja ÜMBERTEGEMISELE. Kogu TOOTJA juhistele vastavalt sooritatud TEHNILINE HOOLDUS, ÜLEVATUS, TEENINDUSTÖÖD ja REMONT säilitab vastavuse standardile, mida on kasutatud seadme konstrueerimisel. Vastasel juhul tuleb kohaldatavatele nõuetele vastavust hinnata ja kontrollida enne käesoleva standardi testide sooritamist. Seda standardit saab kohaldada ka REMONDIjärgsel kontrollil. Standard IEC 60601-1:2005 + IEC 60601-1:2005/AMD1:2012 nõuab, et TOOTJA võtab ühe RISKIHALDUSPROTSESSI osana arvesse seda, kuidas on tagatud EM-SEADME või EM-SÜSTEEMI ohutus toote eluea jooksul. Osana riskihaldusprotsessist võib TOOTJA olla ära näidanud TEHNILINE HOOLDUSE protseduurid. See hõlmab EM-SEADME või EM-SÜSTEEMI jaoks vastavate testimiste määratlemist. TOOTJA võib olla määratlenud vajalikud mõõtseadistused ja -meetodid, kaasa arvatud kasutusjuhendites või muus KAASNEVAS DOKUMENTATSIOONIS toodud toimimisnäitajate kindlustamise testimid. See standard sätestab järgipidevad testprotseduurid. Selle standardi eesmärk ei ole määratleda KORRALISE KONTROLLI välpa. Kui TOOTJA ei ole selliseid välpasid määratlenud, võib välvpade kehtestamise jaoks kasutada lisa F. Elektripaigaldise, kaasa arvatud raviruumide TOITEVÖRGU ja sellega seotud kaabelduse testimine on sellest standardist välja jäetud. Need testimid on hõlmatud standardis IEC 60364-7-710 või võrdväärsetes rahvuslikeks standardites.

Kvantitatiivsed meetodid protsessi parendamises. Kuus sigmat. Osa 1: DMAIC metodika

See osa ISO 13053 standardist kirjeldab äritegevuse parendamise metodikat, mida tuntakse kuue sigmaga. See metodika hõlmab tüüpiliselt viit etappi: määratle, analüüs, mõõda, parenda ja ohja (DMAIC). See osa ISO 13053 standardist soovitab eelistatavaid või parimaid praktikaid kuue sigma projektide elluvõimise käigus kasutatava DMAIC metodika iga etapi kohta. Samuti antakse käesolevas ISO 13053 osas soovitusi Kuue Sigma projekti juhtimiseks ja kirjeldatakse sellistesesse projektidesse kaasatud inimeste rolle, teadmisi ja väljaõpet. Antud ISO 13053 osa saavad kohaldada tootmis-, teenindus- ning operatiivinfovahetusprotsesse kasutavad organisatsioonid.

TÜHISTAMISKÜSITLUS

Selles rubriigis avaldame teavet Euroopa standardimisorganisatsioonides algatatud Euroopa standardite tühistamisküsitluste kohta ning rahvusvahelise alusstandardiga Eesti standardite ja Eesti algupäraste dokumentide tühistamisküsitluste kohta. Küsitluse eesmärk on välja selgitada, kas alljärgnevalt nimetatud standardite ja standardilaadsete dokumentide jätkuv kehtimine Eesti ja/või Euroopa standardina/dokumendina on vajalik.

Allviidatud standardite ja dokumentide kehtivana hoidmise vajalikkusest palume teavitada EVS-i standardiosakonda (standardiosakond@evs.ee).

EVS-EN 12832:2000

Guideline for terminology, characteristics and type of sludges

This European Standard defines terms for sludges described in the scope of CEN/TC308: storm water handling, night soil, urban wastewater collecting systems, urban wastewater treatment plants, treating industrial wastewater similar to urban wastewater, water supply treatment plants, water distribution systems, but excluding hazardous sludges from industry.

Üldiselt kehtivad arvutuspõhimõtted toote mõõtmete $6 \leq \text{hef/dnm} \leq 20$ korral. Mingit tüüpi kinnituselemendi kohta kehtiva vahemiku võib leida asjakohasest Euroopa tehnilisest spetsifikatsioonist

EVS-EN 1177:2008

Lööki pehmendav mänguväljaku aluspinna kate. Kriitilise kukkumiskõrguse määramine

Impact attenuating playground surfacing - Determination of critical fall height

See Euroopa standard määratleb meetodi mänguväljaku aluspinna katte lööki pehmendava omaduse kindlaks määramiseks. See määratleb „kriitilise kukkumiskõrguse“ (vt jaotist 3.2) aluspinna kattele, olles selle efektiivsuse ülemiseks piiriks peavigastuse vähendamisel, kui mänguväljaku seadmete kasutamine vastab standardile EN 1176. Euroopa standardis kirjeldatud katsemeetodid on rakendatavad katsetele, mida viikse läbi laboratooriumis ning kohapeal.

EVS-EN 12259-1:2003+A2+A3

Paiksed tulekustutussüsteemid. Sprinkler- ja veepihustussüsteemide komponendid. Osa 1: Sprinklerid

Fixed firefighting systems - Components for sprinkler and water spray systems - Part 1: Sprinklers

See standard sätestab nõuded soojuse mõju elemendi oleku muutumise või klaasampulli purunemise toimel rakenduvate sprinklerite konstruktsioonile ja talitusele ning kasutamisele automaatsetes sprinklersüsteemides vastavalt EN 12845 „Automaatsed sprinklersüsteemid. Projekteerimine ja paigaldamine“. Ära toodud on ka katsemeetodid ja soovitatav tüübiheaksiidu katsete tabel. MÄRKUS Kõik surveandmete puhul on käesolevas Euroopa standardis toodud surveühikuna baar.

EVS-EN 1537:2013

Geotehniliste eritööde tegemine. Pinnaseankrud

Execution of special geotechnical work - Ground anchors

1.1 See Euroopa standard käsitleb pinnasesse injekteeritud pinnaseankruid, mis on pingestatud ja katsetatud. Neid võib kasutada alalistes või ajutistes rakendustes. MÄRKUS Selle standardi mõiste „ankur (ankrud)“ tähistab „pinnaseankrut (pinnaseankruid)“.

1.2 Ankrud on projekteeritud kooskõlas standardiga EN 1997-1 ja katsetatud kooskõlas standardikavandiga prEN ISO 22477-5.

1.3 Tüüpilised nakke ja survestamise tüüpi ankrud on näidatud joonistel 1 ja 2. 1.4 Termini „pinnas“ all mõeldakse pinnast, kaljut ja olemasolevat või enne ehitustöid paigaldatud täitepinnast. 1.5 Pinnaseankrute kavandamine ja projekteerimine vajab kogemusi ja teadmisi selles spetsiaalses valdkonnas. 1.6 Paigaldamine ja katsetamine nõubab oskuslikku, kvalifitseeritud tööd ja järelvalvet.

1.7 See standard ei asenda spetsialistidest personali teadmisi ja kogenud ehitusettevõtjate asjatundlikkus on selle standardi kasutamisel nõutav. 1.8 See standard ei käsitle selliseid süsteeme nagu tõmbevaiad, kruviankrud, mehaanilised ankrud, pinnase naelutamine, plaatankrud või ekspanderankrud, kuna need ei täida selle standardi nõudeid.

EVS-EN 1930:2011

Lastele kasutamiseks ja laste hooldamiseks mõeldud tooted. Turvabarjäärud. Ohutusnõuded ja katsemeetodid

Child use and care articles - Safety barrier - Safety requirements and test methods

See Euroopa standard määratleb ohutusnõuded ja katsemeetodid laste turvabarjääridele koduseks kasutamiseks siseruumides, mis on konstrueeritud paigaldamiseks avaustele, et piirata lapse juurdepääsu kodus ning hoida ära kuni 24 kuu vanuste väikelaste läbipääsemine. See Euroopa standard ei rakendu toodetele, mis on konstrueeritud paigaldamiseks akendele.

EVS-EN 1995-1-1:2005/A2:2014

Eurokoodeks 5: Puitkonstruktsioonide projekteerimine. Osa 1-1: Üldist. Üldreeglid ja reeglid hoonete projekteerimiseks
Eurocode 5: Design of timber structures - Part 1-1: General - Common rules and rules for buildings

EVS-EN 1995-1-1:2005 muudatus A2.

EVS-EN 1995-1-1:2005+A1+NA+A2

Eurokoodeks 5: Puitkonstruktsioonide projekteerimine. Osa 1-1: Üldist. Üldreeglid ja reeglid hoonete projekteerimiseks
Eurocode 5: Design of timber structures - Part 1-1: General - Common rules and rules for buildings

EN 1995 on rakendatav puitkonstruktsioonide projekteerimisel (saepuit, sh hööveldatud ja ümparipuit, liimpuit, spoonliimpuit jm puidupõhis konstruktsioonid), samuti liimi või mehaaniliste sidemetega liidetud puidupõhiste plaatide projekteerimisel. Käesolev standard vastab standardiga EN 1990:2002 esitatud ohutus- ja kasutusnõuetele ning projekteerimispõhimõtetele.

EVS-EN 60601-1-3:2008/A1:2013

Elektrilised meditsiiniseadmed. Osa 1-3: Üldised nõuded esmasele ohutusele ja olulistele toimimisnäitajatele. Kollateraalstandard: Kiirguskaitse nõuded diagnostilistele röntgenseadmetele

Medical electrical equipment - Part 1-3: General requirements for basic safety and essential performance - Collateral Standard: Radiation protection in diagnostic X-ray equipment (IEC 60601-1-3:2008/A1:2013)

See rahvusvaheline standard kehtib elektriliste meditsiiniseadmete ja elektriliste meditsiinisüsteemide (edaspidi EM-seadmete ja EM-süsteemide) esmase ohutuse ja oluliste toimimisnäitajate kohta. See kollateraalstandard on kohaldatav sellistele röntgenseadmetele ja nende koostisosadele, mille puhul inimpatsiendi radioloogilist kujutist kasutatakse diagnoosimiseks, meditsiiniprotseduuride kavandamiseks või juhtimiseks.

EVS-EN 60601-1-3:2008+A1:2013

Elektrilised meditsiiniseadmed. Osa 1-3: Üldised nõuded esmasele ohutusele ja olulistele toimimisnäitajatele. Kollateraalstandard: Kiirguskaitse nõuded diagnostilistele röntgenseadmetele

Medical electrical equipment - Part 1-3: General requirements for basic safety and essential performance - Collateral Standard: Radiation protection in diagnostic X-ray equipment (IEC 60601-1-3:2008+IEC 60601-1-3:2008/A1:2013)

See rahvusvaheline standard kehtib elektriliste meditsiiniseadmete ja elektriliste meditsiinisüsteemide (edaspidi EM-seadmete ja EM-süsteemide) esmase ohutuse ja oluliste toimimisnäitajate kohta. See kollateraalstandard on kohaldatav sellistele röntgenseadmetele ja nende koostisosadele, mille puhul inimpatsiendi radioloogilist kujutist kasutatakse diagnoosimiseks, meditsiiniprotseduuride kavandamiseks või juhtimiseks.

EVS-EN 62031:2008/A2:2015

Üldtarbevalgustuse valgusdioodmoodulid. Ohutusnõuded
LED modules for general lighting - Safety specifications

Standardi EVS-EN 62031:2008 muudatus.

EVS-EN 62031:2008+A1:2013+A2:2015

Üldtarbevalgustuse valgusdioodmoodulid. Ohutusnõuded
LED modules for general lighting - Safety specifications

See rahvusvaheline standard käsitlev järgmistele valgusdioodmoodulitele esitatavaid üld- ja ohutusnõudeid: valgusdioodmoodulid ilma integreeritud liiteseadisteta, talitlémiseks konstantsel pingel, konstantsel voolul või konstantsel võimsusel; ballastseadist sisaldaavad valgusdioodmoodulid talitlémiseks alalis-toitepingel kuni 250 V või vahelduv-toitepingel kuni 1000 V sagedusega 50 Hz või 60 Hz. MÄRKUS 1 Eraldi paiknevale liiteseadeile esitatavad ohutusnõuded on sätestatud standardis IEC 61347-2-13. Eraldi paikneva liiteseadise toimivusnõuded on sätestatud standardis IEC 62384. MÄRKUS 2 Nõuded integreeritud liiteseadisega, lambisokliga varustatud valgusdioodmoodulitele (ballastseadist sisaldavatele lampidele), mis on ette nähtud kasutamiseks võrgutoitelises üldtarbevalgustuses, koos samasuguse sokliga lampide asendamise võimalusega, on sätestatud standardis IEC 60968 (olemasoleva väljaande muudatus või uue, laiemma käsitlusalaaga väljaanne on arutusel). Nõuded integreeritud liiteseadisega, lambisokliga varustatud valgusdioodmoodulitele (ballastseadist sisaldavatele lampidele), mis on ette nähtud kasutamiseks mitte-võrgutoitelises üldtarbevalgustuses, koos samasuguse sokliga lampide asendamise võimalusega, on arutusel. MÄRKUS 3 Kui selle standardi nõuded käivad mõlema valgusdioodmooduli liigi kohta, nii integreeritud liiteseadisega kui ka ilma selleta, kasutatakse terminit moodul. Kui kasutatakse teminit valgusdioodmoodul üksinda, möeldakse selle all ilma integreeritud liiteseadiseta valgusdioodmoodulit. MÄRKUS 4 See standard sisaldab teavet fotobioloogilise ohutuse kohta.

EVS-EN ISO 15613:2004

Metallide keevitusprotseduuride spetsifitseerimine ja atesteerimine. Tootmisseelsel keevituskatsel põhinev kvalifitseerimine

Specification and qualification of welding procedure for metallic materials - Qualification based on pre-production welding test

See Euroopa standard on osa standardisarjast, mille üksikasjad on toodud standardi EN ISO 15607:2003 lisas A. Standard määratleb, kuidas esialgne keevitusprotseduuri spetsifikaat atesteeritakse tootmisseelse katsetuse alusel. Standardi põhimõtteid võib rakendada ka teistele keevitusprotsessidele. Standard on rakendatav metalsete materjalide kaarkeevitamisel, gaaskeevitamisel, kiirkeevitamisel, kontaktkeevitamisel, vastakkeevitamisel ja hõõrdkeevitamisel. Selle standardi kasutamist võib piirata rakendusstandard või spetsifikatsioon.

EVS-HD 60364-4-42:2011/A1:2015

**Madalpingelised elektripaigaldised. Osa 4-42: Kaitseviisid. Kaitse kuumustoime eest
Low voltage electrical installations - Part 4-42: Protection for safety - Protection against thermal effects**

Standardi EVS-HD 60364-4-42:2011 muudatus.

EVS-HD 60364-4-42:2011+A1:2015

**Madalpingelised elektripaigaldised. Osa 4-42: Kaitseviisid. Kaitse kuumustoime eest
Low voltage electrical installations - Part 4-42: Protection for safety - Protection against thermal effects**

IEC 60364 see osa kehtib elektripaigaldiste kohta, milles on vaja rakendada meetmeid inimeste, koduloomade ja vara kaitseks — elektriseadmetest põhjustatud kuumustoimete, materjalide süttimise või lagunemise ja põletustesse riski eest; — tuleohu korral tekivate leekide leviku eest elektripaigaldistest lähedal asuvatesse teistesse tuletõkkevaheseintega eraldatud ehitiseosadesse; — elektriseadmete, sealhulgas turvaseadmete toimivuse halvenemise eest. MÄRKUS 1 Kaitseks kuumustoimete eest võib rakendada rahvuslike õigusaktide nõudeid. MÄRKUS 2 Kaitse liigvoolude eest on sätestatud standardis IEC 60364-4-43.

EVS-ISO 4037-2:2015

**Röntgeni ja gamma referentskiirgus dosimeetrite ja doosikiiruse mõõteseadmete kalibreerimiseks ja nende koste määramiseks sõltuvana footoni energiast. Osa 2:
Kiirguskaitseline dosimeetria energiavahemikus 8 keV kuni 1,3 MeV ja 4 MeV kuni 9 MeV
X and gamma reference radiation for calibrating dosimeters and doserate meters and for determining their response as a function of photon energy -- Part 2: Dosimetry for radiation protection over the energy ranges from 8 keV to 1,3 MeV and 4 MeV to 9 MeV**

See standardi osa kirjeldab röntgeni ja gamma referentskiirguse dosimeetria protseduure kiirguskaitse instrumentide kalibreerimiseks energiavahemikus ligikaudu 8 keV kuni 1,3 MeV ja 4 MeV kuni 9 MeV. Nende referentskiirguste alusel saadud nominaalseid kermakiiruse väärtsusi ja saamisviise kirjeldatakse standardi osas ISO 4037-1.

STANDARDIPEALKIRJADE MUUTMINE

Selles jaotises avaldame infot Eesti standardite eesti- ja ingliskeelsete pealkirjade muutmise kohta ja ingliskeelsete pealkirjade tõlkimise kohta.

Lisainformatsioon või ettepanekud standardipealkirjade ebatäpsustest enquiry@evs.ee.

UUED HARMONEERITUD STANDARDID

Toote nõuetele vastavuse seaduse kohaselt avaldab Eesti Standardikeskus oma veebilehel ja ametlikus väljaandes teavet harmoneeritud standardeid ülevõtvtate Eesti standardite kohta.

Harmoneeritud standardiks nimetatakse EÜ direktiivide kontekstis Euroopa Komisjoni mandaadi alusel Euroopa standardimisorganisatsioonide koostatud ja vastu võetud standardit.

Harmoneeritud standardite kasutamise korral eeldatakse enamiku vastavate direktiivide mõistes, et standardi kohaselt valmistatud toode täidab direktiivi olulisi nõudeid ning on seega reeglina kõige lihtsam viis töendada direktiivide oluliste nõute täitmist. Harmoneeritud standardi täpne tähdus ja õiguslik staatus tuleneb siiski iga direktiivi tekstist eraldi ning võib direktiivist olenevalt erineda.

Lisainfo:

<http://www.newapproach.org/>

<http://ec.europa.eu/growth/single-market/european-standards/harmonised-standards>

Eesti Standardikeskus avaldab ametlikus väljaandes harmoneeritud standardeid ülevõtvtate Eesti standardite kohta järgmist infot:

- harmoneeritud standardi staatuse saanud Eesti standardid
- harmoneeritud standardi staatuses olevate Eesti standardite kohta avaldatud märkused ja hoiatused, mida tuleb standardite järgimisel arvestada
- harmoneeritud standardi staatuse kaotanud Eesti standardid

Info esitatakse vastavate direktiivide kaupa.

Direktiiv 1999/5/EÜ Raadio- ja telekommunikatsiooni terminalseadmed (EL Teataja 2015/C 125/01)
