### **EVS/TK 62 „Maasoojuse puuraugud ja vee puurkaevud“ asutamine**

Komitee tähis: EVS/TK 62

Komitee pealkiri: Maasoojuse puuraugud ja vee puurkaevud

Komitee asutamise kuupäev: 16.09.2016

Komitee käsitusala: Maasoojuse puuraukude ja vee puurkaevude rajamise ja kasutamise standardimine ning terminoloogia korrastamine komitee töövaldkonnas.

Komitee esimees: Argo Jõeleht, aseesimees: Kalle Alasi

Komitee sekretär: Rebeka Hansen-Vera

EVS koordinaator Mihkel Siitam (mihkel@evs.ee)

# UUED STANDARDID JA STANDARDILAADSED DOKUMENDID

Igakuiselt uuendatav teave eestikeelsena avaldatavate Eesti standardite kohta, sh eeldatavad kommenteerimise ja avaldamise tähtpäevad, on leitav Standardikeskuse veebilehel [avaldatavast standardimisprogrammist](#).

## 01 ÜLDKÜSIMUSED. TERMINOOGIA. STANDARDIMINE. DOKUMENTATSIOON

### EVS 807:2016

#### Kinnisvarakeskkonna juhtimine ja korrasroid Management and Maintenance of Facilities

See standard avab kinnisvarakeskkonna juhtimise olemuse. Iga kinnisvaraobjekti omanik oma otsuste ja rahastamisega tagab temale kuuluval kinnisvaraobjektil kinnisvarakeskkonna ohutuse (üldmõistes: korrashoiu) ja kasutatavuse nii ühiskonnale kui ka konkreetsetele lõppkasutajatele. Sobiliku kinnisvarakeskkonna tagamiseks on vaja teha eri tegevusi, mille elluviimisel kasutatakse üldjuhul vastava ettevalmistusega erialaspetsialiste. Standardis koostatud tegevuste klassifikaator on vajalik omanikule eelkõige selleks, et saada aru kinnisvaraobjektiga seotud tegevuste ulatusest – omand alati kohustab. Ühiskonnas kehtivad eri tasandite õigusaktid, mis reglementeerivad minimumnõudeid korrashoiuga seotud tegevustele ja nende tulemustele. Konkreetse kinnisvaraobjekti omanik võib alati taotleda soovi korral kõrgemat kvaliteeti kui vaid miinimumnõuetele vastavust. Korrashoiuteenuse osutamisel lähtuvad lepingupooled võlaõigusseaduses sätestatud käsunduslepingu või töövõtulepingu regulatsionist, olenevalt valitud lepingu vormist. Standardi koostisosaks olev tegevuste klassifikaator on samuti vajalik kinnisvaraobjektiga seotud kulude analüüsimeiseks ja nende kulude jaotamiseks objektiga seotud poolte vahel. Standard esitab valdkonnaga seotud põhimõisted, kirjeldab kinnisvarakeskkonna juhtimise ratsionaalset ja kvaliteetset korraldamist, sellega kaasnevad infovajadust ja dokumenteerimist ning kaasnevaid kulusid. Selle standardi järgimine on vabatahtlik, kuni seda ei ole kohustuslikuks tehtud nt õigusaktiga või lepingupoolte vahelise kokkuleppega.

## EVS-EN ISO 9626:2016

### **Stainless steel needle tubing for the manufacture of medical devices - Requirements and test methods (ISO 9626:2016)**

ISO 9626:2016 applies to rigid stainless steel needle tubing suitable for use in the manufacture of hypodermic needles and other medical devices primarily for human use. It provides requirements and test methods for the tubes manufactured for needles as component used in medical devices. Additional performance testing on the tube aspect may be required when the component is incorporated in the ready-to-use device. It specifies the dimensions and mechanical properties of steel tubing of designated metric sizes 3,4 mm (10 Gauge) to 0,18 mm (34 Gauge). It does not apply to flexible stainless steel tubing because the mechanical properties differ from those specified for rigid tubing in ISO 9626:2016. However, manufacturers and purchasers of flexible tubing are encouraged to adopt the dimensional specifications given in ISO 9626:2016.

### **Alarm systems - Intrusion and hold-up systems - Part 2-9: Intrusion detectors - Active infrared beam detectors**

This Technical Specification is applicable to Active Infrared Beam Detectors (AIBDs) installed inside buildings and used as part of intrusion alarm systems. It specifies four security Grades 1 to 4 (in accordance with EN 50131 1) and uses environmental Classes I to IV (in accordance with EN 50130 5). This standard covers only AIBDs using interruption based technology. Other technologies i.e. Doppler based technology are not covered by this document. Functions additional to the mandatory functions specified in this document can be included in the AIBD, providing they do not adversely influence the correct operation of the mandatory functions. This document does not apply to system interconnections.

### **Reovee väikepuhastid kuni 50 ie. Osa 3: Kompakt- ja/või kohapeal monteeritavad puhastid**

### **Small wastewater treatment systems for up to 50 PT - Part 3: Packaged and/or site assembled domestic wastewater treatment plants**

This European Standard specifies requirements, test methods, the marking and evaluation of conformity for packaged and/or site assembled domestic wastewater treatment plants (including guest houses and businesses) used for populations up to 50 inhabitants. Small wastewater treatment plants according to this European Standard are used for the treatment of raw domestic wastewater. It covers plants with tanks made of concrete, steel, PVC-U, Polyethylene (PE), Polypropylene (PP) and Glass Reinforced Polyester (GRP-UP). The test methods specified in this European Standard establish the performance of the plant, needed to verify its suitability for the end use. This European Standard applies for small wastewater treatment plants for use buried in the ground where no vehicle loads are applied to the product. This European Standard applies to plants where all prefabricated components are factory or site-assembled by one manufacturer and which are tested as a whole.

**Reovee väikepuhastid kuni 50 ie. Osa 7: Tehases valmistatud süvapuhastid**

**Small wastewater treatment systems for up to 50 PT - Part 7: Prefabricated tertiary treatment units**

This European Standard specifies requirements, test methods, the marking and evaluation of conformity for a packaged and/or site assembled tertiary treatment unit for installation either separately or in a pre-existing unit. It applies for tertiary treatment units that are placed on the market as complete units used for the tertiary treatment of domestic wastewater by biological, physical, chemical, electrical processes and coming from: a) units in accordance with EN 12566-3 or EN 12566-6; b) installations designed and constructed in accordance with CEN/TR 12566-5. Equivalent secondary treated effluent may come from existing systems. Package and/or site assembled tertiary treatment units according to this standard consist of one or more watertight tanks without any direct infiltration into the ground, made of concrete, corrosion resistant or coated steel, un-plasticised poly-vinyl chloride (PVC-U), polyethylene (PE), glass reinforced thermosetting plastics (GRP) based on polyester resin (UP) (GRP-UP), polypropylene (PP) and polydicyclopentadiene (PDCPD).

## **EVS-EN 13204:2016**

**Kaheotstarbelised hüdraulilised päästevahendid tuletörje- ja päistemeeskondadele. Ohutus- ja toimimisnõuded**

**Double acting hydraulic rescue tools for fire and rescue service use - Safety and performance requirements**

This European Standard specifies safety and performance requirements for double acting hydraulic rescue tools manufactured after the date of publication. It is applicable to double acting hydraulic rescue tool systems which are intended for use by the firefighting and rescue services, principally for cutting through, spreading or pushing apart the structural parts of road vehicles, ships, trains, aircraft and building structures involved in accidents. They consist of a separate power pack, the tool[s] and the necessary interconnections and intended accessories, as defined in Clause 3 – Terms and definitions. This document deals with all significant hazards, hazardous situations or hazardous events relevant to the machinery, when it is used as intended and under conditions of misuse which are reasonably foreseeable by the manufacturer. NOTE 1 The aim is to assist while extracting the casualties or to create a working space for paramedical services taking the local conditions into account. It is not applicable to additional requirements for: a) operation in severe conditions (e.g. extreme environmental conditions such as: temperatures outside the range  $-20^{\circ}\text{C}$  up to  $+55^{\circ}\text{C}$ , corrosive environment, tropical environment, contaminating environments, strong magnetic fields, potentially explosive atmospheres); b) the risk directly arising from the means provided for the portability, transportability and mobility of double-acting hydraulic rescue tools during periods of their operation. NOTE 2 For the EU/EEA other Directives can be applicable to the equipment in the scope, for example the Electro Magnetic Compatibility Directive.

### EVS-EN ISO 5667-6:2016

#### Water quality - Sampling - Part 6: Guidance on sampling of rivers and streams (ISO 5667-6:2014)

ISO 5667-6:2014 sets out the principles to be applied to the design of sampling programmes, sampling techniques, and the handling of water samples from rivers and streams for physical and chemical assessment. It is not applicable to the sampling of estuarine or coastal waters nor for microbiological sampling. (Procedures for microbiological sampling are given in ISO 19458.) ISO 5667-6:2014 is neither applicable to the examination of sediment, suspended solids or biota, nor to dammed stretches of rivers or streams. Also, it is not applicable to passive sampling of surface waters (see ISO 5667-23). In cases where naturally occurring or artificially constructed dams result in the retention or storage of water for several days or more, the stretch of the river or stream should be considered as a standing water body. For sampling purposes, see ISO 5667-4.

### 17 METROLOOGIA JA MÕÖTMINE. FÜÜSIKALISED NÄHTUSED

#### CEN/TS 16165:2016

#### Determination of slip resistance of pedestrian surfaces - Methods of evaluation

This Technical Specification specifies test methods for the determination of the slip resistance of surfaces in the most commonly encountered situations in which pedestrians walk. This Technical Specification does not cover sports surfaces and road surfaces for vehicles (skid resistance).

Keel: en

Alusdokumendid: CEN/TS 16165:2016

Asendab dokumenti: CEN/TS 16165:2012

#### EVS-EN 60990:2016

#### Methods of measurement of touch current and protective conductor current

IEC 60990:2016 defines measurement methods for d.c. or a.c. current of sinusoidal or non-sinusoidal waveform, which could flow through the human body, and current flowing through a protective conductor. The measuring methods recommended for TOUCH CURRENT are based upon the possible effects of current flowing through a human body. In this standard, measurements of current through networks representing the impedance of the human body are referred to as measurements of TOUCH CURRENT. These networks are not necessarily valid for the bodies of animals. The specification or implication of specific limit values is not within the scope of this standard. IEC TS 60479 series provides information regarding the effects of current passing through the human body from which limit values may be derived. This standard is applicable to all classes of EQUIPMENT, according to IEC 61140. The methods of measurement in this standard are not intended to be used for TOUCH CURRENTS having less than 1 s duration, patient currents as defined in IEC 60601-1, a.c. at frequencies below 15 Hz, and currents above those chosen for ELECTRIC BURN limits. This third edition cancels and replaces the second edition published in 1999. It constitutes a technical revision. The principal changes in this edition as compared with the second edition are as follows: - the effects names have been updated to reflect increased understanding of the range of effects and is in concert with present usage; - the conditions of use invoking a GRIPPABLE PART have been reduced in the application of the requirements based upon the current understanding of this effect; - the references to ISO 10012-1, which has been replaced by management standard of the same number, have been replaced with explanatory text, where needed to maintain the sense of the document; - former informative Annex H (GRIPPABLE PART) has been deleted from this update as it does not properly represent the full set of conditions under which immobilization can occur. A new informative Annex H (Analysis of frequency filtered touch current circuits measurement) has been added and the Bibliography (formerly Annex M) has been updated with additional references for completeness. This basic safety publication is primarily intended for use by technical committees in the preparation of standards in accordance with the principles laid down in IEC Guide 104 and ISO/IEC Guide 51. It is not intended for use by manufacturers or certification bodies independent of product standards.

#### EVS-EN 61094-3:2016

#### Electroacoustics - Measurement microphones - Part 3: Primary method for free-field calibration of laboratory standard microphones by the reciprocity technique

IEC 61094-3:2016 specifies a primary method of determining the complex free-field sensitivity of laboratory standard microphones so as to establish a reproducible and accurate basis for the measurement of sound pressure under free-field conditions. It is applicable to laboratory standard microphones meeting the requirements of IEC 61094-1. It is intended for use by laboratories with highly experienced staff and specialized equipment. This second edition cancels and replaces the first edition published in 1995. This edition constitutes a technical revision.

## **EVS-EN 61340-4-9:2016**

### **Electrostatics - Part 4-9: Standard test methods for specific applications - Garments**

IEC 61340-4-9:2016 provides test methods for evaluating the electrical resistance of garments that contain surface conductive or dissipative components or materials used in the electronics industry for the control of electrostatic discharge. This standard defines procedures for measuring electrical resistance, including a system resistance test for garments that provide a ground path for personnel. This edition includes the following significant technical changes with respect to the previous edition: a) classification of three types of garments - static control garments, - groundable static control garments, and - groundable static control garment system; b) additional measurements according to the garment type including cuff measurements, panel to groundable point, testing with a person in the garment system; c) sleeve to sleeve measurements allowed with probes or by hanging; d) additional recommended values for new garment types as set out in Annex A.

## **EVS-EN ISO 14405-1:2016**

### **Geometrical product specifications (GPS) - Dimensional tolerancing - Part 1: Linear sizes (ISO 14405-1:2016)**

ISO 14405-1:2016 establishes the default specification operator (see ISO 17450- 2) for linear size and defines a number of special specification operators for linear size for features of size, e.g. "cylinder", "sphere", "torus", "[1]", "circle", "two parallel opposite planes", or "two parallel opposite straight lines". It also defines the specification modifiers and the drawing indications for these linear sizes. It covers the following linear sizes: a) local size: - two-point size; - spherical size; - section size; - portion size; b) global size: - direct global linear size: - least-squares size; - maximum inscribed size; - minimum circumscribed size; - minimax size; - indirect global linear size; c) calculated size: - circumference diameter; - area diameter; - volume diameter; d) rank-order size: - maximum size; - minimum size; - average size; - median size; - mid-range size; - range of sizes; - standard deviation of sizes. ISO 14405-1:2016 defines tolerances of linear sizes for the following: - a + and/or - limit deviation (e.g. 0/-0,019); - an upper limit of size (ULS) and/or lower limit of size (LLS) (e.g. 15,2 max., 12 min., or 30,2/30,181); - an ISO tolerance class code in accordance with ISO 286- 1 (e.g. 10 h6); with or without modifiers. ISO 14405-1:2016 provides a set of tools to express several types of size characteristic. It does not present any information on the relationship between a function or a use and a size characteristic. [1] A torus is a feature of size when its directrix diameter is fixed.

### EVS-EN 62591:2016

**Industrial communication networks - Wireless communication network and communication profiles - WirelessHART™**

IEC 62591:2016 specifies a wireless communication network in addition to the Type 20 in IEC 61158-3-20, IEC 61158-4-20, IEC 61158-5-20, IEC 61158-6-20 and a Communication Profile CP 9/2 in addition to IEC 61784-1, CPF 9. It specifies the following: - Physical layer service definition and protocol specification, - Data-link layer service and protocol, - Application layer service and protocol, - Network management, - Security, - Communication profile, - Wireless procedures and Gateway. This second edition cancels and replaces the first edition published in 2010. This edition constitutes a technical revision. This edition includes the following significant technical changes with respect to the previous edition: - enhancements to the performance statistics using key performance indicators (KPI); - "Stale Data" detection was added (see services Read stale data setpoints, Write stale data timer and Write stale data count setpoint); - gateway commands were added; - a Quarantined State was added; - CCA Modes were extended to be more in-line with IEEE 802.15.4; - clarifications on whitelist and blacklist management were added; - clarifications on join (e.g. only require a single neighbor) were added; - clarifications on use of join links, table management, and defaults were added; - corrections and updates were made. The reader's attention is drawn to the fact that Annex M lists all of the "in-some-country" clauses on differing practices of a less permanent nature relating to the subject of this standard.

## 27 ELEKTRI- JA SOOJUSENERGEETIKA

### EVS-EN 16825:2016

#### Tööstuslikuks/kaubanduslikuks kasutamiseks mõeldud külmkambrid ja -letid. Klassifikatsioon, nõuded ja katsetingimused Refrigerated storage cabinets and counters for professional use - Classification, requirements and test conditions

This European Standard specifies requirements for the construction, characteristics, performance including energy consumption of refrigerated storage cabinets and counters for professional use in commercial kitchens, hospitals, canteens, preparation areas of bars, bakeries, gelateria, institutional catering and similar professional areas. The products covered in this European Standard are intended to store foodstuffs. It specifies test conditions and methods for checking that the requirements have been satisfied, as well as classification of the cabinets and counters, their marking and the list of their characteristics to be declared by the manufacturer. It is not applicable to: - refrigerated cabinets used in the direct sale of foodstuffs; - cabinets that carry out food processing and not just storage function (e.g. bakery cabinets that chill, heat and humidity); - cabinets with water cooled condenser; - appliances with remote condensing unit; - appliances with open top tables and saladettes for preparation or storage of foodstuffs; - cabinet specifically intended for storage of specific foodstuffs (i.e. fresh meat, fresh fish, etc.) operating at a temperature different from those specified in Table 1; - chest freezers; - appliances intended for short time /intermittent normal operation during the full day; - built-in cabinet; - roll-in cabinet; - pass-through cabinet.

### EVS-EN 60965:2016

#### Nuclear power plants - Control rooms - Supplementary control room for reactor shutdown without access to the main control room

IEC 60965:2016 establishes requirements for the Supplementary Control Room provided to enable the operating staff of nuclear power plants to shut down the reactor, where previously operating, and maintain the plant in a safe shut-down state in the event that control of the safety functions can no longer be exercised from the Main Control Room, due to unavailability of the Main Control Room or its facilities. The design has to ensure that the Supplementary Control Room is protected against the hazards, including any localised extreme hazards, leading to the unavailability of the Main Control Room. This new edition includes the following significant technical changes with respect to the previous edition: - requirements associated with regular testing of the supplementary control room (SCR); - requirements to assess the time available during which the reactor will be safe but unattended, in order to move from the main control room (MCR) to the SCR and for the SCR to become operational; - taking into account new requirements laid down by the IAEA.

### EVS-EN 62808:2016

#### Nuclear power plants - Instrumentation and control systems important to safety - Design and qualification of isolation devices

IEC 62808:2015 establishes requirements for the design, analysis and qualification of isolation devices used to ensure electrical independence of redundant safety system circuits, or between safety and lower class circuits, as specified in IEC 60709. This standard includes guidance on the determination of the maximum credible fault that is applied to the isolation devices. The maximum credible fault can be used as a basis for the test levels used in testing based on other standards (e.g. IEC TS 61000-6-5 or IEC 62003).

### EVS-EN 50290-2-29:2016

#### Communication cables - Part 2-29: Common design rules and construction - Crosslinked polyethylene insulation compounds: instrumentation, control and field bus cables

This Part 2-29 of EN 50290 gives specific requirements for Crosslinked Polyethylene (XLPE) compounds to be used for the insulation of instrumentation, control and field bus cables. There are several routes used for manufacture of XLPE insulated cables and as a consequence a number of different types of polyethylene compound may be specified. The compounds required for the different manufacturing processes are described (Table 1). The unstabilised materials require antioxidant to be added during the cable extrusion process.

### **EVS-EN 50289-4-16:2016**

**Communication cables - Specifications for test methods - Part 4-16: Environmental test methods - Circuit integrity under fire conditions**

This European Standard, part of EN 50289, specifies the criteria for copper data and telecom cables designed to have intrinsic resistance to fire and intended for use as emergency circuits for alarm, lighting and communication purposes. This European Standard is applicable to copper data and telecom cables for emergency circuit. The test method is described in EN 50200 and/or EN50577. This European Standard is to be used with EN 50200 and/or EN50577 for CPR purpose.

### **EVS-EN 50290-2-29:2016**

**Communication cables - Part 2-29: Common design rules and construction - Crosslinked polyethylene insulation compounds: instrumentation, control and field bus cables**

This Part 2-29 of EN 50290 gives specific requirements for Crosslinked Polyethylene (XLPE) compounds to be used for the insulation of instrumentation, control and field bus cables. There are several routes used for manufacture of XLPE insulated cables and as a consequence a number of different types of polyethylene compound may be specified. The compounds required for the different manufacturing processes are described (Table 1). The unstabilised materials require antioxidant to be added during the cable extrusion process.

### **EVS-EN 60153-1:2016**

**Hollow metallic waveguides - Part 1: General requirements and measuring methods**

IEC 60153-1:2016 specifies straight hollow metallic tubing for use as waveguides in electronic equipment. It covers: a) the details necessary to ensure compatibility and, as far as essential, interchangeability; b) test methods; c) uniform requirements for the electrical and mechanical properties. It should be noted that no recommendations are made for the materials to be used for waveguides. The choice of material is agreed between customer and manufacturer. This edition includes the following significant technical changes with respect to the previous edition: a) expand the operation frequency range; b) revise the equation of attenuation. This publication is to be read in conjunction with IEC 60154 series.

### **EVS-EN 60153-2:2016**

**Hollow metallic waveguides - Part 2: Relevant specifications for ordinary rectangular waveguides**

IEC 60153-2:2016 specifies straight hollow metallic tubing of ordinary rectangular waveguide for use as waveguides in electronic equipment. The aim of this standard is to specify for hollow metallic waveguides: a) the details necessary to ensure compatibility and, as far as essential, interchangeability; b) test methods; c) uniform requirements for the electrical and mechanical properties. It should be noted that no recommendations are made for the materials to be used for waveguides. The choice of material is agreed between customer and manufacturer. This document should be read in conjunction with IEC 60153-1, which gives general

requirements and test methods. This edition includes the following significant technical changes with respect to the previous edition: a) expand and revise the operation frequency range for waveguides; b) revise the allowance of aperture dimensions; c) revise the test method for aperture dimensions; d) revise the equation of attenuation.

## **EVS-EN 60154-1:2016**

### **Flanges for waveguides - Part 1: General requirements**

This part of IEC 60154 specifies the dimensions of waveguide flanges for use in electronic equipment. It covers requirements for flanges drilled before or after mounting on waveguides. It should be noted that for optimum electrical performance, post-drilling of the alignment holes after mounting is recommended. The aim of this standard is to specify for waveguide flanges the mechanical requirements necessary to ensure compatibility and, as far as practicable, interchangeability as well as to ensure adequate electrical performance.

#### **Electronic Signatures and Infrastructures (ESI); CAdES digital signatures; Part 2: Extended CAdES signatures**

This part specifies CAdES digital signatures. CAdES signatures are built on CMS signatures as specified in [i.7], by incorporation of signed and unsigned attributes, which fulfil certain common requirements (such as the long term validity of digital signatures, for instance) in a number of use cases. The present document specifies a number of CAdES signature levels, each one based on different combinations of attributes, with a higher degree of optionality than the CAdES baseline signatures specified in part 1 of ETSI EN 319 122. CAdES digital signatures specified in the two parts of ETSI EN 319 122 aim at supporting electronic signatures in different regulatory frameworks.

### **Electronic Signatures and Infrastructures (ESI); XAdES digital signatures; Part 1: Building blocks and XAdES baseline signatures**

The present document specifies XAdES digital signatures. XAdES signatures build on XML digital signatures as specified in [1], by incorporation of signed and unsigned qualifying properties, which fulfil certain common requirements (such as the long term validity of digital signatures, for instance) in a number of use cases. The present document specifies XML Schema definitions for the aforementioned qualifying properties as well as mechanisms for incorporating them to XAdES signatures. The present document specifies formats for XAdES baseline signatures, which provide the basic features necessary for a wide range of business and governmental use cases for electronic procedures and communications to be applicable to a wide range of communities when there is a clear need for interoperability of digital signatures used in electronic documents. The present document defines four levels of XAdES baseline signatures addressing incremental requirements to maintain the validity of the signatures over the long term, in a way that a certain level always addresses all the requirements addressed at levels that are below it. Each level requires the presence of certain XAdES qualifying properties, suitably profiled for reducing the optionality as much as possible. Procedures for creation and validation of XAdES digital signatures are out of scope and specified in EN 319 102 [i.6] The present document aims at supporting electronic signatures in different regulatory frameworks.

### **Electronic Signatures and Infrastructures (ESI); XAdES digital signatures; Part 2: Extended XAdES signatures**

The present document specifies XAdES digital signatures. XAdES signatures are built on XML digital signatures as specified in [i.4], by incorporation of signed and unsigned qualifying properties, which fulfil certain common requirements (such as the long term validity of digital signatures, for instance) in a number of use cases. The present document specifies a number of XAdES signature levels, each one based on different combinations of qualifying properties, with a higher degree of optionality than the XAdES baseline signatures specified in part 1 of ETSI EN 319 132. XAdES digital signatures specified in the two parts of ETSI EN 319 132 aim at supporting electronic signatures in different regulatory frameworks.

## **EVS-EN 319 162-1 V1.1.1:2016**

### **Electronic Signatures and Infrastructures (ESI); Associated Signature Containers (ASiC); Part 1: Building blocks and ASiC baseline containers**

To produce an European Norm that will specify formats for Associated Signature Containers (ASiC). These are containers that bind together a collection of signed data objects with Advanced Electronic signatures (XAdES or CAdES) applied to them, or with time-stamps computed on them. It will include an ASiC building blocks and the ASiC Baseline containers. ASiC core specification part will evolve the latest version of ETSI TS 102 918; ASiC Baseline Profile part will evolve the latest version of ETSI TS 103 174. The work will include the identification and agreement of relevant issues to deal with during the evolution of the aforementioned TSs to EN parts. Part 1 specifies the core specification with the format for a single container binding together a number of signed objects (e.g. documents, XML structured data, spreadsheet, multimedia content) with either Advanced Electronic Signatures or time-stamps. This uses package formats based on ZIP and supports the following signature and time-

stamp token formats: CAdES signature(s) as specified in EN 19 122, XAdES detached signature(s) as specified in EN 19 132; and RFC 3161 time-stamp tokens.

#### **Electronic Signatures and Infrastructures (ESI); Policy and security requirements for Trust Service Providers issuing certificates; Part 2: Requirements for trust service providers issuing EU qualified certificates**

The policy and security requirements are defined in terms of requirements for the issuance, maintenance and life-cycle management of EU qualified certificates as defined in Regulation (EU) 910/2014. These policy and security requirements support three reference certificate policies for the issuance, maintenance and life-cycle management of EU qualified certificates issued to natural persons (including natural persons associated with a legal person), to legal persons and to web sites, respectively. The present document does not specify how the requirements identified can be assessed by an independent party, including requirements for information to be made available to such independent assessors, or requirements on such assessors. The present document however provides in annex a check-list of the policy requirements specific to TSP issuing EU qualified certificates (as expressed in the present document) as well as all the requirements incorporated by reference to EN 319 411-1 and EN 319 401, that can be used by the TSP to prepare an assessment of its practices against the present document and/or by the assessor when conducting the assessment for confirming that a TSP meets the requirements for issuing qualified certificates under Regulation (EU) 910/2014.

## **EVS-EN 60990:2016**

### **Methods of measurement of touch current and protective conductor current**

IEC 60990:2016 defines measurement methods for d.c. or a.c. current of sinusoidal or non-sinusoidal waveform, which could flow through the human body, and current flowing through a protective conductor. The measuring methods recommended for TOUCH CURRENT are based upon the possible effects of current flowing through a human body. In this standard, measurements of current through networks representing the impedance of the human body are referred to as measurements of TOUCH CURRENT. These networks are not necessarily valid for the bodies of animals. The specification or implication of specific limit values is not within the scope of this standard. IEC TS 60479 series provides information regarding the effects of current passing through the human body from which limit values may be derived. This standard is applicable to all classes of EQUIPMENT, according to IEC 61140. The methods of measurement in this standard are not intended to be used for TOUCH CURRENTS having less than 1 s duration, patient currents as defined in IEC 60601-1, a.c. at frequencies below 15 Hz, and currents above those chosen for ELECTRIC BURN limits. This third edition cancels and replaces the second edition published in 1999. It constitutes a technical revision. The principal changes in this edition as compared with the second edition are as follows: - the effects names have been updated to reflect increased understanding of the range of effects and is in concert with present usage; - the conditions of use invoking a GRIPPABLE PART have been reduced in the application of the requirements based upon the current understanding of this effect; - the references to ISO 10012-1, which has been replaced by management standard of the same number, have been replaced with explanatory text, where needed to maintain the sense of the document; - former informative Annex H (GRIPPABLE PART) has been deleted from this update as it does not properly represent the full set of conditions under which immobilization can occur. A new informative Annex H (Analysis of frequency filtered touch current circuits measurement) has

been added and the Bibliography (formerly Annex M) has been updated with additional references for completeness. This basic safety publication is primarily intended for use by technical committees in the preparation of standards in accordance with the principles laid down in IEC Guide 104 and ISO/IEC Guide 51. It is not intended for use by manufacturers or certification bodies independent of product standards.

## EVS-EN 62591:2016

### Industrial communication networks - Wireless communication network and communication profiles - WirelessHART™

IEC 62591:2016 specifies a wireless communication network in addition to the Type 20 in IEC 61158-3-20, IEC 61158-4-20, IEC 61158-5-20, IEC 61158-6-20 and a Communication Profile CP 9/2 in addition to IEC 61784-1, CPF 9. It specifies the following: - Physical layer service definition and protocol specification, - Data-link layer service and protocol, - Application layer service and protocol, - Network management, - Security, - Communication profile, - Wireless procedures and Gateway. This second edition cancels and replaces the first edition published in 2010. This edition constitutes a technical revision. This edition includes the following significant technical changes with respect to the previous edition: - enhancements to the performance statistics using key performance indicators (KPI); - "Stale Data" detection was added (see services Read stale data setpoints, Write stale data timer and Write stale data count setpoint); - gateway commands were added; - a Quarantined State was added; - CCA Modes were extended to be more in-line with IEEE 802.15.4; - clarifications on whitelist and blacklist management were added; - clarifications on join (e.g. only require a single neighbor) were added; - clarifications on use of join links, table management, and defaults were added; - corrections and updates were made. The reader's attention is drawn to the fact that Annex M lists all of the "in-some-country" clauses on differing practices of a less permanent nature relating to the subject of this standard.

## 45 RAUDTEETEHNIKA

### EVS-EN 16186-3:2016

#### Raudteealased rakendused. Juhikabiin. Osa 3: Näidikute kujundus

#### Railway applications - Driver's cab - Part 3: Design of displays

This European Standard specifies all necessary design rules and associated assessment criteria as well as guidance concerning the design of information and the corresponding user interfaces of driver's cabs of EMU, DMU, Railcars, Locomotives and Driving trailers. NOTE 1 This standard applies to rolling stock in the scope of the Directive 2008/57/EC. It considers the tasks the driver has to carry out and human factors. This standard specifies how information is arranged and displayed. It is explicitly applicable to display applications like TRD, ETD, CCD and TDD and may be completed by the CLC/TS 50459 series. This standard is not applicable to legacy ATP systems. If requirements in this standard are in conflict with the ERA DMI document (ERA\_ERTMS\_015560) the requirements of the ERA DMI document should prevail for the CCD ETCS application. NOTE 2 For resolving any discrepancies (e.g. 5.4.2.3) ERA is expected to harmonize the usage philosophy of the ERA DMI with this standard. All assessments based on the normative requirements of this standard are applicable mainly to - symbols provided by Annex A, - arrangement of screen areas conform with Figure 1 (generic organization of information), - colours, fonts, - audible information. This standard is applicable to the following aspects: - legibility and intelligibility of displayed information: general rules concerning the layout of information on the displays, including character size and spacing; - definition of harmonized colours, symbols, etc.; - definition of harmonized principles for the command interface (by physical or touchscreen buttons): size, symbols, reaction time, way to give feedback to the driver, etc.; - general arrangements (dialogue structures, sequences, layout philosophy, colour philosophy), symbols, audible information, data entry arrangements. NOTE 3 If this standard deals with how information can be given for operation and in degraded situations, it does not define operating rules and degraded situations. This standard does not request any safety requirement related with displayed information. This standard specifies minimum requirements and does not prevent more complex solutions. Requirements describing the functions using the display are out of scope of this standard.

### **EVS-EN 14112:2016**

#### **Fat and oil derivatives - Fatty Acid Methyl Esters (FAME) - Determination of oxidation stability (accelerated oxidation test)**

This European Standard specifies a method for the determination of the oxidation stability of fatty acid methyl esters (FAME) at 110 °C, by means of measuring the induction period up to 48 h. NOTE 1 EN 15751 [1] describes a similar test method for oxidation stability determination of pure fatty acid methyl esters and of blends of FAME with petroleum-based diesel containing 2 % (V/V) of FAME at minimum. NOTE 2 The precision statement of this test method was determined in a Round Robin exercise with induction periods up to 8,5 h, thus covering the limit value in EN 14214. Results from precision studies on EN 15751 indicate that the precision statement is valid for induction periods up to 48 h but not for higher values. NOTE 3 Limited studies on EN 15751 with EHN (2-ethyl hexyl nitrate) on FAME blends indicated that the stability is reduced to an extent which is within the reproducibility of the test method. It is likely that the oxidation stability of pure FAMEs is also reduced in the presence of EHN when EN 14112 is used for testing.

### EVS-EN ISO 6976:2016

#### Natural gas - Calculation of calorific values, density, relative density and Wobbe indices from composition (ISO 6976:2016)

This International Standard specifies methods for the calculation of gross calorific value, net calorific value, density, relative density, ross Wobbe index and net Wobbe index of natural gases, natural gas substitutes and other combustible gaseous fuels, when the composition of the gas by mole fraction is known. The methods specified provide the means of calculating the properties of the gas mixture at commonly used reference conditions. For the purpose of this International Standard the input mole fractions shall sum to unity exactly. Guidance on the achievement of this requirement is available in ISO 6974-1 and ISO 6974-2. All components with mole fractions greater than 0,000 05 shall be accounted for. If the composition of the gas is known by volume fractions, these shall first be converted to mole fractions in accordance with ISO 14912 (subclause 5.1.2). Note, however, that these derived mole fractions will have uncertainties greater than those of the original volume fractions. The methods of calculation require values for various physical properties of the pure components; these values, together with associated uncertainties, are provided in tables and their sources are identified. Methods are given for estimating the uncertainties of calculated properties. The methods of calculation of the values of properties on either a molar, mass or volumetric basis are applicable to any natural gas, natural gas substitute or other combustible fuel that is normally gaseous, except that for properties on the volumetric basis the method is restricted to mixtures for which the compression factor at reference conditions is greater than 0,9. Example calculations are given in annex D for the recommended methods of calculation.

### EVS-EN 384:2016

#### Structural timber - Determination of characteristic values of mechanical properties and density

This standard gives a method for determining characteristic values of mechanical properties and density, for defined populations of visual grades and/or mechanical strength classes of sawn timber. Additionally it covers the stages of sampling, testing, analysis and presentation of the data. A method is also given for checking the strength of a timber population against its designated value. The values determined in accordance with this standard for mechanical properties and density are suitable for assigning grades and species to the strength classes of EN 338. NOTE 1 For assigning grades and species to the strength classes in EN 338 only three characteristic values, i.e. bending or tension strength, mean modulus of elasticity parallel to grain in bending or tension and density need to be determined, other properties can be calculated according to Tab. 6.2. NOTE 2 EN 1912 gives examples of established visual grades assigned to strength classes.

#### Tööstus-, kommerts-, garaažiuksed ja -väravad. Tootestandard, toodete omadused Industrial, commercial, garage doors and gates - Product standard, performance characteristics

1.1 General This European Standard specifies the safety and performance requirements for doors, gates and barriers, intended for installation in areas in the reach of persons, and for which the main intended uses are giving safe access for goods and vehicles accompanied or driven by persons in industrial, commercial or residential premises. This European Standard also covers commercial doors such as rolling shutters and rolling grilles used in retail premises which are mainly provided for the access of persons rather than vehicles or goods. These doors can include pass doors incorporated in the door leaf which are also covered by this European Standard. These devices can be manually or power operated. This European Standard does not cover operation in environments where the electromagnetic disturbances are outside the range of those specified in EN 61000-6-3. 1.2 Exclusions This European Standard does not apply to the following which are intended for a different use: - lock gates and dock gates; - doors on lifts; - doors on vehicles; - armoured doors; - doors mainly for the retention of animals; - theatre textile curtains; - horizontally moving manually operated pedestrian doors with a leaf size less than 6,25 m<sup>2</sup>; - horizontally moving power operated doors less than 2,5 m wide and 6,25 m<sup>2</sup> area, designed principally for pedestrian use in accordance with prEN 12650-1; - revolving doors of any size; - railway barriers; - barriers used solely for vehicles. This European Standard does not cover the radio part of doors. If a radio operating device is used, the relevant ETSI standards should be applied in addition. This European Standard does not contain any specific requirements for fire resistance or smoke control characteristics which are covered in prEN 13241-2.

# STANDARDIKAVANDITE ARVAMUSKÜSITLUS

Selleks, et tagada standardite vastuvõtmise, järgides konsensuse põhimõtteid, peab standardite vastuvõtmisele eelnema standardikavandite avalik arvamusküsitlus, milleks ettenähtud perioodi jooksul (reeglinä 2 kuud) on ajast huvitatult võimalik tutvuda standardikavanditega, esitada kommentaare ning teha ettepanekuid parandusteks. Eriti on oodatud teave, kui rahvusvahelist või Euroopa standardikavandit ei peaks vastu võtma Eesti standardiks (vastuolu Eesti õigusaktidega, pole Eestis rakendatav jt põhjustel).

Arvamusküsitlusele esitatakse Euroopa ja rahvusvahelised standardikavandid, mis on kavas üle võtta Eesti standarditeks, ja Eesti algupärased standardikavandid ning algupäraste tehniliste spetsifikatsioonide ja juhendite kavandid.

Iga arvamusküsitlusel oleva kavandi kohta on esitatud järgnev informatsioon:

- Tähis
- Pealkiri
- Käsitletavalala
- Keel (en = inglise; et = eesti)
- Euroopa või rahvusvahelise alusdokumendi tähis, selle olemasolul
- Asendusseos, selle olemasolul
- Arvamuste esitamise tähtaeg

Kavanditega saab tutvuda ja kommentaare esitada Standardikeskuse veebilehel asuvas kommenteerimisportaalil: [www.evs.ee/kommenteerimisportaal](http://www.evs.ee/kommenteerimisportaal).

Igakuiselt uuendatav teave eestikeelsena avaldatavate Eesti standardite kohta, sh eeldatavad kommenteerimise ja avaldamise tähtpäevad, on leitav Standardikeskuse veebilehel avaldatavast standardimisprogrammist.

#### Aerospace series - Quality management systems - Data Matrix Quality Requirements for Parts Marking

This standard defines uniform quality and technical requirements relative to metallic parts marking performed using "data matrix symbology" within the aviation, space, and defence industry. ISO/IEC 16022 specifies general requirements (e. g., data character encodation, error correction rules, decoding algorithm). In addition to ISO/IEC 16022 specification, part identification with such symbology is subject to the requirements in this standard to ensure electronic reading of the symbol. The marking processes covered by this standard are as follows: • Dot Peening; • Laser; • Electro-Chemical Etching. Further marking processes will be

included, if required. Unless specified otherwise in the contractual business relationship, the company responsible for the design of the part shall determine the location of the data matrix marking. Symbol position should allow optimum illumination from all sides for readability. This standard does not specify information to be encoded.

### FprEN 50664

#### Product standard to demonstrate the compliance of equipment intended for use only by workers with limits on human exposure to electromagnetic fields (0 Hz - 300 GHz), when put into service or in situ

The object of this generic standard is to provide a route for evaluation of equipment used by workers against limits on human exposure to electric, magnetic and electromagnetic fields, and induced and contact current when it is put into service in its operational environment, and also for in situ or post-market evaluation of such equipment. The frequency range covered is 0 Hz to 300 GHz. Other standards can apply to products covered by this document. In particular this document is not designed to evaluate the electromagnetic compatibility with other equipment; nor does it reflect any product safety requirements other than those specifically related to human exposure to electromagnetic fields. This standard applies to electronic and electrical equipment for which no dedicated put into service or in situ product or product family standard regarding worker exposure to electromagnetic fields exists. If such a standard does exist then it shall be used and this standard shall not.

### FprEN 50665

#### Product standard for assessment of electronic and electrical equipment related to human exposure restrictions for electromagnetic fields (0 Hz - 300 GHz)

The object of this generic standard is to provide a route for evaluation of such equipment against limits on human exposure to electric, magnetic and electromagnetic fields, and induced and contact current. This standard applies to electronic and electrical equipment for which no dedicated product- or product family standard, or standard relating to low power equipment, regarding human exposure to electromagnetic fields exists. If such a standard does exist then it shall be used and this standard shall not. The frequency range covered is 0 Hz to 300 GHz. This standard is intended to cover both intentional and non-intentional radiators. It should be noted that the supplier of a specific piece of equipment might not know the overall exposure environment in which the equipment is being used. This product standard can only assess the human exposure from the specific equipment under evaluation. Other standards can apply to products covered by this document. In particular this document is not designed to evaluate the electromagnetic compatibility with other equipment; nor does it reflect any product safety requirements other than those specifically related to human exposure to electromagnetic fields.

## FprEN 50671

### Product standard for electromagnetic fields from household appliances, and similar electrical apparatus used by the public and workers, with regard to human exposure

The object of this standard is to provide a route for evaluation of household and electrical appliances and similar equipment used in the workplace against limits on human exposure to electric and magnetic fields. This standard applies to equipment containing transformers and power supplies, motors, heating elements, or their combination, such as domestic appliances, light industrial and workplace appliances, electric tools and electric toys. It applies to equipment powered from the mains, by batteries or by any other electrical power source. This standard specifically does not apply to: - apparatus intended to be part of the fixed electrical installation of buildings (such as fuses, circuit breakers, cables and switches); - radio and television receivers, audio and video equipment, and electronic music instruments; - medical electrical appliances; - personal computers and similar equipment; - radio transmitters; - industrial equipment for heating materials using electrical arcs, electric or magnetic fields and/or electromagnetic waves with a frequency below 300 GHz; - wireless or inductive power transfer; - inductive loop systems for T-coil receivers. The frequency range covered is 10 Hz to 400 kHz. It should be noted that the supplier of a specific piece of equipment might not know the overall exposure environment in which the equipment is being used. This product standard can only assess the human exposure from the specific equipment under evaluation. Other standards can apply to products covered by this document. In particular this document is not designed to evaluate the electromagnetic compatibility with other equipment; nor does it reflect any product safety requirements other than those specifically related to human exposure to electromagnetic fields.

## prEN 12285-1

### Workshop fabricated steel tanks - Part 1: Horizontal cylindrical single skin and double skin tanks for the underground storage of flammable and nonflammable water polluting liquids other than for heating and cooling of buildings

This European Standard specifies the product characteristics and test methods for workshop fabricated cylindrical, horizontal steel tanks, single (type S) and double skin (type D) intended to be used for the underground storage of water polluting liquids (both flammable and non-flammable) and installed in industrial processes or in petrol stations at normal ambient temperature conditions (-20 °C to +50 °C) within the following limits: — from 800 mm up to 3000 mm nominal diameter and; — up to a maximum overall length of 6 times the nominal diameter; — with an operating pressure (Po) of maximum 150 kPa (1,5 bar) (abs.) and minimum - 5 kPa (-50 mbar) and; — for double skin tanks with a vacuum leak detection system where the kinematic viscosity does not exceed  $5 \times 10^{-3}$  m<sup>2</sup>/s. Tanks designed to this standard allow for an earth cover of up to 1,5 m. If there are imposed traffic loads or a greater earth cover, calculation is required.

## prEN 12285-3

### Workshop fabricated steel tanks - Part 3: Horizontal cylindrical single skin and double skin tanks for the underground storage of flammable and nonflammable water polluting liquids for heating and cooling of buildings

This European Standard specifies the product characteristics and test/assessment methods for workshop fabricated cylindrical, horizontal steel tanks, single (type S) and double skin (type D) intended to be used for the underground storage of water polluting liquids (both flammable and non-flammable), specifically used for storage and/or supply of fuel for building heating/cooling systems, and of hot or cold water not intended for human consumption at normal ambient temperature conditions (-20 °C to +50 °C) within the following limits: — from 800 mm up to 3000 mm nominal diameter and, — up to a maximum overall length of 6 times the nominal diameter, — for liquids with a maximum density of up to 1,1 kg/l and, — with an operating pressure (Po) of maximum 150 kPa (1,5 bar)(abs.) and minimum - 5 kPa (- 50 mbar) and, — for double skin tanks with a vacuum leak detection system where the kinematic viscosity does not exceed  $5 \times 10^{-3}$  m<sup>2</sup>/s. Tanks designed to this standard allow for an earth cover of up to 1,5 m. If there are imposed traffic loads or a greater earth cover, calculation is required. This standard is not applicable to tanks installed in industrial processes or in petrol stations, nor to loads and special measures necessary in areas subject to risk of earthquakes. Guidance on installation of tanks is presented in Annex A, which does not include special measures that might be necessary in areas subject to flooding.

### prEVS 871

#### **Tuletökke- ja evakuatsiooni avatäited ja sulused. Kasutamine**

#### **Fire safety and emergency exit doors and door hardware - Use**

Käesolev standard esitab nõuded tuletökke- ja evakuatsiooniuste ning suluste kasutamisele ehitistes. Käesoleva standardi evakuatsiooni osa rakendatakse evakuatsiooniteedele jäävatele ustele, mis on tuletökkefunktsiooniga või ilma selleta. Tuletökke- ja evakuatsiooninõuetäitmise vajadus sõltub konkreetse avatäite asukohast ehitises. Standardis ei käsitleta eritingimusi, mis võivad mitmesugustel põhjustel esineda inimeste luku taga hoidmisel (näiteks kinnipidamisasutustes vms juhtudel). Sellised lahendused tuleb igale konkreetsele ehitisele välja töötada järelevalveametkonnaga kooskõlastatult. Käesolev standard ei kirjelda tuletökke- ja evakuatsiooniuste ning nende suluste katsetamise metoodikat, mis on määratletud omaette normdokumentides. Standardi edaspidist kasutamist võivad mõjutada Eestis üle võetavaid avatäiteid puudutavad Euroopa standardid.

#### **Non-destructive testing - Leak testing - Calibration of reference leaks for gases (ISO/DIS 20486:2016)**

This standard specifies the calibration of those leaks that are used for the adjustment of leak detectors for the determination of leakage rate in everyday use. The preferred calibration method in this case is a comparison with a standard leak. In this way the leaks used for routine use become traceable to a primary standard as the ISO 9000 series of standards require. The comparison procedures are preferably applicable to helium leaks, because this test gas can be selectively measured by a mass spectrometer leak detector (MSLD) (the definition of MSLD is given in EN 1330-8). Calibration by comparison (see methods A and B below) with known standard leaks is easily possible for leaks with reservoir and leakage rates below 10<sup>-7</sup> Pa.m<sup>3</sup>/s. From 10<sup>-7</sup> Pa.m<sup>3</sup>/s to 10<sup>-4</sup> Pa.m<sup>3</sup>/s no leaks reliable enough to be used as transfer standard exist. Leaks in this range can only be calibrated by measurement of flow in a calibrated capillary tube (see method C below). Leakage rates greater than 10<sup>-4</sup> Pa.m<sup>3</sup>/s can be measured by flow meters calibrated against primary national standards.

### prEN 12285-3

#### **Workshop fabricated steel tanks - Part 3: Horizontal cylindrical single skin and double skin tanks for the underground storage of flammable and nonflammable water polluting liquids for heating and cooling of buildings**

This European Standard specifies the product characteristics and test/assessment methods for workshop fabricated cylindrical, horizontal steel tanks, single (type S) and double skin (type D) intended to be used for the underground storage of water polluting liquids (both flammable and non-flammable), specifically used for storage and/or supply of fuel for building heating/cooling systems, and of hot or cold water not intended for human consumption at normal ambient temperature conditions ( $-20^{\circ}\text{C}$  to  $+50^{\circ}\text{C}$ ) within the following limits: — from 800 mm up to 3000 mm nominal diameter and, — up to a maximum overall length of 6 times the nominal diameter, — for liquids with a maximum density of up to 1,1 kg/l and, — with an operating pressure ( $P_0$ ) of maximum 150 kPa (1,5 bar)(abs.) and minimum – 5 kPa (–50 mbar) and, — for double skin tanks with a vacuum leak detection system where the kinematic viscosity does not exceed  $5 \times 10^{-3} \text{ m}^2/\text{s}$ . Tanks designed to this standard allow for an earth cover of up to 1,5 m. If there are imposed traffic loads or a greater earth cover, calculation is required. This standard is not applicable to tanks installed in industrial processes or in petrol stations, nor to loads and special measures necessary in areas subject to risk of earthquakes. Guidance on installation of tanks is presented in Annex A, which does not include special measures that might be necessary in areas subject to flooding.

#### **Refrigerating systems and heat pumps - Safety and environmental requirements - Positive displacement refrigerant compressors**

This European Standard applies to positive displacement refrigerant compressors for stationary and mobile refrigerating systems and heat pumps defined in 3.1, hereafter called compressors. It applies for compressors used in commercial and industrial appliances and with electrical energy supply including integral motors, up to 1 000 VAC and 1 500 VDC. It applies to open drive, semi hermetic and hermetic motor compressors, which contain a positive compression function. This standard is not applicable to: - compressors used in household appliance for which EN 60335 2 34 applies; - compressors using water or air as refrigerant. This European Standard does not deal with requirements for vibration and noise. NOTE 1 Compressors for automotive comfort air conditioning systems can be developed according e.g. SAE J 639. NOTE 2 Noise emission depends on the complete installation of the built-in compressors and the corresponding operating conditions. For semi-hermetic and open drive compressors which include moving parts and for which the external envelope is primarily designed for mechanical loads, thermal loads (to limit the possible deformation due to temperature), stiffness of the structure (external mechanical loads and weight of the equipment), taking into account established safe industrial practice, it is considered that pressure is not a significant design factor. Attached parts covering other functions e.g. oil separators, oil coolers, suction accumulators should comply to EN 14276 1 or EN 13445 6 (cast iron) or EN 13445 8 (aluminium) or showing compliance to the relevant European requirements. This applies also to shells for hermetic compressors either welded or with any kind of permanent joint. Requirements for compressors used in explosive atmospheres are not covered by this standard. NOTE 3 For further guidance see EN 13463-1. This European Standard deals with all significant hazards, hazardous situations and events relevant to compressors, when they are used as intended and under conditions for misuse which are reasonably foreseeable by the manufacturer (see Clause 4). This European Standard specifies safety requirements for the design, construction, manufacture and testing, documentation and marking of compressors, including integral accessories, e.g. shut-off valve, if necessary. The requirements in this standard take account of the intended use, as defined in EN ISO 12100:2010, 3.12. This standard relates to the compressor itself which is to be incorporated in a refrigerating system. This standard is not applicable to compressors as defined in the scope which are manufactured before the date of publication as EN.

### prEN ISO 8434-1

#### **Metallic tube connections for fluid power and general use - Part 1: 24° cone connectors (ISO/DIS 8434-1:2016)**

This part of ISO 8434 specifies the general and dimensional requirements for 24° cone connectors using cutting ring and O-ring seal cone (referred to as DKO) suitable for use with ferrous and non-ferrous tubes with outside diameters from 4 mm to 42 mm inclusive. These connectors are for use in fluid power and general applications within the limits of pressure and temperature

specified in this part of ISO 8434. They are intended for the connection of plain end tubes and hose fittings to ports in accordance with ISO 6149-1, ISO 1179-1 and ISO 9974-1. (See ISO 12151-2 for related hose fitting specification.) These connectors provide full-flow connections in hydraulic systems operating to the working pressures shown in Table 1. Because many factors influence the pressure at which a system performs satisfactorily, these values are not to be understood as guaranteed minimums. For every application, sufficient testing will need to be conducted and reviewed by both the user and manufacturer to ensure that required performance levels are met. NOTE 1 For new designs in hydraulic fluid power applications, see the requirements given in 9.6. Where the requirements of the application allow for the use of elastomeric seals, connector designs that conform to International Standards and incorporate elastomeric sealing are preferred. NOTE 2 For use under conditions outside the pressure and/or temperature limits specified, see 5.4. This part of ISO 8434 also specifies a performance and qualification test for these connectors.

#### Metallic coatings on metallic substrates - Electrodeposited and chemically deposited coatings - Review of methods available for testing adhesion (ISO/DIS 2819:2016)

This International Standard describes methods of checking the adhesion of electrodeposited and chemically deposited coatings. It is limited to tests of a qualitative nature. Table 2 indicates the suitability of each test for some of the most usual types of metallic coatings. Most of the tests described are capable of destroying both the coating and the article being tested, but some destroy the coating only. Even if the adhesion of the coating is found to be satisfactory on articles not destroyed in testing, it should not be assumed that the articles are undamaged. For example, the burnishing test (see 2.1) may render an article unacceptable and the thermal shock test (see 2.12) may produce unacceptable metallurgical changes. This International Standard does not describe certain tests which have been developed at various times to give a quantitative measure of adhesion of metallic coating to a substrate since such tests require special apparatus and considerable skill in their performance which renders them unsuitable as quality control tests for production

### **Solid biofuels - Determination of moisture content - Oven dry method - Part 2: Total moisture - Simplified method (ISO/CDIS 18134-2:2016)**

This document describes the method of determining the total moisture content of a test sample of solid biofuels by drying in an oven and is used when the highest precision is not needed, e.g. for routine production control on site. The method described in ISO 18134 (all parts) is applicable to all solid biofuels. The moisture content of solid biofuels (as received) is always reported based on the total mass of the test sample (wet basis). NOTE The term moisture content, when used with biomass materials, can be misleading since untreated biomass frequently contains varying amounts of volatile compounds (extractives) which might evaporate when determining moisture content by oven drying (see References [2] and [4]).

#### **Plahvatusohlikud keskkonnad. Osa 0: Seadmed. Üldnöuded Explosive atmospheres - Part 0: Equipment - General requirements**

This part of IEC 60079 specifies the general requirements for construction, testing and marking of equipment and Ex Components intended for use in explosive atmospheres. The standard atmospheric conditions (relating to the explosion characteristics of the atmosphere) under which it may be assumed that equipment can be operated are: • temperature  $-20^{\circ}\text{C}$  to  $+60^{\circ}\text{C}$ ; • pressure 80 kPa (0,8 bar) to 110 kPa (1,1 bar); and • air with normal oxygen content, typically 21 % v/v. This standard and other standards supplementing this standard specify additional test requirements for equipment operating outside the standard temperature range, but further additional consideration and additional testing may be required for equipment operating outside the standard atmospheric pressure range and standard oxygen content, particularly with respect to types of protection that depend on quenching of a flame such as 'flameproof enclosure "d"' (IEC 60079-1) or limitation of energy, 'intrinsic safety "i"' (IEC 60079-11).

### **Dimensions of low-voltage switchgear and controlgear - Standardized mounting on rails for mechanical support of switchgear, controlgear and accessories**

This International Standard specifies dimensional and functional requirements for the compatible mounting of switchgear, controlgear and accessories on some types of rails. The object of this standard is to specify those dimensions which are critical for the correct design of mounting rails and equipment. The following sections are covered by this standard: – "Top hat" section; – "C" section; – "G" section. NOTE 1 Mounting compatibility does not imply functional interchangeability. Annexes deal with specific steel mounting rails satisfying the requirements of this standard, and give additional dimensional data and loading requirements applicable to such rails. NOTE 2 The detailed design and material of specific steel rails is given in the annexes. NOTE 3 Other shapes of rails complying to this standard not listed in Annex A can be used. Mounting rails used as protective conductor are covered by IEC 60947-7-2. This international standard has the status of a horizontal standard in accordance with IEC Guide 108:2006.

## **prEN 60825-4:2016**

### **Safety of laser products - Part 4: Laser guards**

This part of IEC 60825 specifies the requirements for laser guards, permanent and temporary (for example for service), that enclose the process zone of a laser processing machine, and specifications for proprietary laser guards. This standard applies to all component parts of a guard including clear (visibly transmitting) screens and viewing windows, panels, laser curtains and walls. In addition this part of IEC 60825 indicates: a) how to assess and specify the protective properties of a laser guard; and b) how to select a laser guard. NOTE: Requirements for beam path components, beam stops and those other parts of a protective housing of a laser product which do not enclose the process zone are contained in IEC 60825-1. This part of IEC 60825 deals with protection against laser radiation only. Hazards from secondary radiation that may arise during material processing are not addressed.

## **prEN 61071:2016**

### **Jõuelektronikakondensaatorid**

### **Capacitors for power electronics**

This International Standard applies to capacitors for power electronics applications. The operating frequency of the systems in which these capacitors are used is usually up to 15kHz, while the pulse frequencies may be up to 5 to 10 times the operating frequency. The standard distinguishes between a.c. and d.c. capacitors which are considered as components when mounted in enclosures. This standard covers an extremely wide range of capacitor technologies for numerous applications, e.g. overvoltage protection, d.c. and a.c. filtering, switching circuits, d.c. energy storage, auxiliary inverters, etc.

Telekommunikatsionivõrgu seade; Elektromagnetilise ühilduvuse (EMC) nõuded Harmoneeritud standardi direktiivi 2014/53/EL põhinõuete alusel

Telecommunication network equipment; ElectroMagnetic Compatibility (EMC) requirements; Harmonised Standard covering the essential requirements of the Directive 2014/30/EU

To revise: - Scope: it should be removed the exclusion of Optical amplifiers as these items are in transmission products - References: update with the latest basic standards and adding EN 55032. - Definitions: it needs to change the definition of public network- Tests methods: add details on how to test multiple power ports connected to the same source; possible alignment with test method for surge immunity in latest EN 61000-4-5 - Emission requirements: add the EN 55032 - Emission on DC power port:

remove the statement about 6 dB margin on noise floor because already covered by basic standards - Radiate emissions: reference to EN 300 127 test on large TLC systems to be replaced by EN 55016-2-3 - Radiated immunity: frequency range to be extended up to 6 GHz to cover the immunity requirements of radio services in the frequency range 2,7-6 GHz - EFT pulse repetition rate on signal ports: 100 kHz frequency to be adopted for xDLS ports - Performance criteria for power supply equipment: the power systems with output up to 400 V- DC (ref.: EN 330132-3-1) have to be included

## FprEN 60793-1-47:2016

### Optical fibres - Part 1-47: Measurement methods and test procedures - Macrobending loss

This part of IEC 60793 establishes uniform requirements for measuring the macrobending loss of single-mode fibres (class B) at 1 550 nm or 1 625 nm, category A1 multimode fibres at 850 nm or 1 300 nm, and category A3 and A4 multimode fibres at 650 nm, 850 nm or 1 300 nm, thereby assisting in the inspection of fibres and cables for commercial purposes. The standard gives two methods for measuring macrobending sensitivity: • Method A – Fibre winding, pertains to class B single-mode fibres and category A1 multimode fibres. • Method B – Quarter circle bends, pertains to category A3 and A4 multimode fibres. For both of these methods, the macrobending loss can be measured utilizing general fibre attenuation techniques, e.g., the power monitoring technique (see Annex A) or the cut-back technique (see Annex B). Methods A and B are expected to produce different results if they are applied to the same fibre. This is because the key difference between the two methods is the deployment, including the bend radius and length of fibre that is bent. The reason for the difference is that A3 and A4 multimode fibres are expected to be deployed in short lengths with a smaller number of bends per unit fiber length compared to single-mode and category A1 multimode fibres. In the following text, the “curvature radius” is defined as the radius of the suitable circular shaped support (e.g. mandrel or guiding groove on a flat surface) on which the fibre can be bent. In addition, informative Annex E has been added to approximate bend loss for class B single-mode fibres across a broad wavelength range at various effective bends.

## prEN 60793-1-33:2016

### Optical fibres - Part 1-33: Measurement methods and test procedures - Stress corrosion susceptibility

This part of IEC 60793 contains descriptions of the five main test methods for the determination of stress corrosion susceptibility parameters. The object of this standard is to establish uniform requirements for the mechanical characteristic of stress corrosion susceptibility for silica-based fibres. Dynamic fatigue and static fatigue tests are used to determine the (dynamic) nd value and (static) ns value of stress corrosion susceptibility parameters. Currently, only the nd-value is assessed against specification. Measured values greater than 18 per this procedure reflect the nd-value of silica, which is approximately 20. Higher values will not translate to demonstrable enhanced fatigue resistance.

### Süsteemi- ja tarkvaratehnika. Süsteemi elutsükli protsessid

### Systems and software engineering - System life cycle processes

ISO/IEC/IEEE 15288:2015 establishes a common framework of process descriptions for describing the life cycle of systems created by humans. It defines a set of processes and associated terminology from an engineering viewpoint. These processes can be applied at any level in the hierarchy of a system's structure. Selected sets of these processes can be applied throughout the life cycle for managing and performing the stages of a system's life cycle. This is accomplished through the involvement of all stakeholders, with the ultimate goal of achieving customer satisfaction. ISO/IEC/IEEE 15288:2015 also provides processes that support the definition, control and improvement of the system life cycle processes used within an organization or a project. Organizations and projects can use these processes when acquiring and supplying systems. ISO/IEC/IEEE 15288:2015 concerns those systems that are man-made and may be configured with one or more of the following system elements: hardware, software, data, humans, processes (e.g., processes for providing service to users), procedures (e.g., operator instructions), facilities, materials and naturally occurring entities.

### Railway applications - Rolling stock equipment - Onboard lithium-ion traction batteries

This International Standard applies to onboard lithium-ion traction batteries for railway applications. This standard specifies the design, operation parameters, safety recommendations, data exchange, routine and type tests, as well as marking and designation. Battery systems described in this standard are used for the energy storage system (ESS) for the traction power of railway vehicles such as hybrid vehicles as defined in IEC 62864-1. Auxiliary batteries to supply power only to the auxiliary equipment are excluded. Subcomponents within the battery systems, e.g. battery management system (BMS) and battery thermal management system (BTMS), are also covered in this standard. Power conversion equipment (e.g. chopper, converter, etc.), inductors, capacitors and switchgear are excluded from the scope of this standard. General requirements for onboard ESS are described in IEC 62864-1:2016. This standard specifies the lithium-ion battery technology but does not prevent the use of battery technologies other than lithium-ion technology for application as traction batteries. A hybrid energy storage system, which uses two or more energy storage technologies combined, e.g. a traction battery and double layer capacitors, is not covered in this standard. However, if different technologies of energy storage systems are used on the same railway vehicle and managed independently, each independent energy storage system is covered by its own standard.

## **65 PÖLLUMAJANDUS**

### **prEN 13368-3**

### **Fertilizers - Determination of chelating agents in fertilizers by chromatography - Part 3: Determination of Fe chelated by [S,S]-EDDS, or the amount of the chelating agent, by ion pair chromatography**

This European Standard specifies a method for the chromatographic determination of the chelating agent [S,S]-EDDS in fertilizers. The method allows the identification and the determination of the total concentration of the water-soluble fraction of this chelating agent. It does not allow distinguishing between the free form and the metal bound form of the chelating agent. This method is applicable to EC fertilizers containing chelates of one or more of the following micro-nutrients: cobalt, copper, iron, manganese and zinc, covered by Regulation (EC) No 2003/2003 [4]. It is applicable to a mass fraction of the metal chelated of at least 0,35 %. NOTE 1 The substance EDDS (ethylenediamine-N,N'-disuccinic acid) exists as several different stereo isomeric forms. [S,S] (with CAS Number 20846-91-7), [R,R] and [R,S] optical isomers are possible. [S,S] and [R,R] are mirror images with equal chemical characteristics. However only the [S,S] isomer is biodegradable. When both are present, they form the racemic mixture. The [R,S] isomer (the meso isomer) is only slowly biodegradable. Only the [S,S]-EDDS isomer is allowed by the Regulation (EC) No 2003/2003. Since the Cu chelate of the [R,R]-EDDS isomer presents the same stability than the [S,S]-EDDS, both should coelute. The absence of [R,S]-EDDS indicates that only a pure isomer ([S,S] or [R,R]) exist. An additional test based on polarimetry can be used to ascertain the isomeric characteristic of the sample, or the standard.

#### **Bio-based solvents - Requirements and test methods**

This European Standard sets requirements for bio-based solvents in terms of properties, limits, application classes and test methods. It lays down the characteristics and details for assessment of bio-based solvents: - fit for purpose in terms of performance related properties; - that comply with the requirements regarding the health, safety and environment which apply to general solvents; and - that are derived from a certain minimum percentage of biomass. NOTE EN 16575 defines the term "bio-based" as derived from biomass and clarifies that "bio-based" does not imply "biodegradable". In addition, "biodegradable" does not necessarily imply the use of "bio-based" material. In addition, this document provides detail on information required to address the sustainability of the product. This is essential information as this will provide a basis to choose the most sustainable solvent.

#### **Bitumen and bituminous binders - Determination of dynamic viscosity of bituminous binder using a rotating spindle apparatus**

This European Standard specifies a method for the determination of the dynamic viscosity of a variety of bituminous binders: modified and unmodified bituminous binders, bituminous emulsions, cut-back and fluxed bituminous binders, by means of a coaxial viscometer. Standard application temperatures are quoted, although the dynamic viscosity can be measured at other temperatures if required. Similarly, viscosity is quoted at standard rates of shear, although additional measures can be taken at varying shear rates if required. WARNING The use of this standard may involve hazardous materials, operations and equipment. This standard does not purport to address all of the safety problems associated with its use. It is the responsibility of the user of this standard to establish appropriate safety and health practices and to determine the applicability of regulatory limitations prior to use.

#### **Solid biofuels - Determination of moisture content - Oven dry method - Part 2: Total moisture - Simplified method (ISO/FDIS 18134-2:2016)**

This document describes the method of determining the total moisture content of a test sample of solid biofuels by drying in an oven and is used when the highest precision is not needed, e.g. for routine production control on site. The method described in ISO 18134 (all parts) is applicable to all solid biofuels. The moisture content of solid biofuels (as received) is always reported based on the total mass of the test sample (wet basis). NOTE The term moisture content, when used with biomass materials, can be misleading since untreated biomass frequently contains varying amounts of volatile compounds (extractives) which might evaporate when determining moisture content by oven drying (see References [2] and [4]).

#### Plastics - Determination of migration of plasticizers (ISO/FDIS 177:2016)

This document specifies a method for the determination of the tendency of plasticizers to migrate from plastics in which they are contained into other materials or other plastics when they are brought into close contact. NOTE 1 The surfaces into which the migration can proceed can also consist of organic surface coatings, such as lacquers. This test is suitable a) for evaluating the tendency displayed by plastics, particularly in the form of films and sheets, to lose certain of their liquid constituents when they are brought into contact with materials that have an affinity for plasticizers, and b) for studying the tendency to migrate of plasticizers contained in a resin or a series of resins, in one or more concentrations. In case b), standard compounds are prepared on the basis of a well-characterized resin with well-defined ratios of plasticizer to resin. NOTE 2 When the absorbent sheets themselves contain a substance capable of migrating, simultaneous migrations can occur from the test specimens into the absorbent sheets and vice versa. The results may also be affected by the migration of other constituents of the plastic material (for example, oligomers) or by the loss of any volatile constituents other than plasticizers from the plastic material or the absorbent layer.

### **Acoustics - Laboratory and field measurement of flanking transmission for airborne, impact and building service equipment sound between adjoining rooms - Part 1: Frame document (ISO/DIS 10848-1:2016)**

The ISO 10848- series specifies measurement methods to be performed in a laboratory test facility or in the field in order to characterize the flanking transmission of one or several building components. The performance of the building components is expressed either as an overall quantity for the combination of elements and junction (such as the normalized flanking level difference and/or normalized flanking impact sound pressure level) or as the vibration reduction index of a junction or the normalized direction-average vibration level difference of a junction. Two approaches are used for structure-borne sound sources in buildings, a normalized flanking equipment sound pressure level and a transmission function that can be used to estimate sound pressure levels in a receiving room due to structure-borne excitation by service equipment in a source room. The former approach assumes that flanking transmission is limited to one junction (or no junction if the element supporting the equipment is the separating element), and the latter considers the combination of direct (if any) and all flanking transmission paths. This part of ISO 10848 contains definitions, general requirements for test elements and test rooms, and measurement methods. Guidelines are given for the selection of the quantity to be measured depending on the junction and the types of building elements involved. Other parts of ISO 10848 specify the application for different types of junction and building elements. The quantities characterizing the flanking transmission can be used to compare different products, or to express a requirement, or as input data for prediction methods, such as ISO 12354-1 and ISO 12354-2.

Keel: en

## **prEN ISO 10848-2**

### **Acoustics - Laboratory and field measurement of flanking transmission for airborne, impact and building service equipment sound between adjoining rooms - Part 2: Application to Type B elements when the junction has a small influence (ISO/DIS 10848-2:2016)**

ISO 10848 specifies measurement methods to be performed in a laboratory test facility or in the field in order to characterize the flanking transmission of one or several building components. This part of ISO 10848 considers only laboratory measurements. The measured quantities may be used to compare different products, or to express a requirement, or as input data for prediction methods, such as ISO 12354-1 and ISO 12354-2. However, the measured quantities  $D_{n,f}$ ,  $L_{n,f}$  and  $L_{ne0,f}$  only represent the performance with the dimensions for the test specimens described in this standard. This part of ISO 10848 is referred to in ISO 10848-1, 4.5, as being a supporting part of the frame document. It applies to Type B elements as defined in ISO 10848-1, such as suspended ceilings, access floors, light uninterrupted façades or floating floors. The transmission from one room to another can occur simultaneously through the test element and via the plenum (if any). For measurements made according to this part of ISO 10848, the total sound transmission is determined, and it is not possible to separate the two kinds of transmission.

## **prEN ISO 10848-3**

### **Acoustics - Laboratory and field measurement of flanking transmission for airborne, impact and building service equipment sound between adjoining rooms - Part 3: Application to Type B elements when the junction has a substantial influence (ISO/DIS 10848-3:2016)**

ISO 10848 specifies measurement methods to be performed in a laboratory test facility or in the field in order to characterize the flanking transmission of one or several building components. This part of ISO 10848 specifies laboratory and field measurements of buildings for Type B elements (defined in ISO 10848-1) when the junction has a substantial influence. Laboratory measurements are used to quantify the performance of the junction with suppressed flanking transmission from the laboratory structure. Field measurements are used to characterize the in situ performance and it is not usually possible to suppress unwanted flanking transmission; hence the results can only be considered representative of the performance of that junction when installed in that particular building structure. This part of ISO 10848 is referred to in ISO 10848-1, 4.5, as being a supporting part to the frame document and applies to Type B elements that are structurally connected as defined in ISO 10848-1. The measured quantities

can be used to compare different products, or to express a requirement, or as input data for prediction methods, such as ISO 12354-1 and ISO 12354-2.

#### **prEN ISO 10848-4**

#### **Acoustics - Laboratory and field measurement of flanking transmission for airborne, impact and building service equipment sound between adjoining rooms - Part 4: Application to junctions with at least one Type A element (ISO/DIS 10848-4:2016)**

ISO 10848 specifies measurement methods to be performed in a laboratory test facility or in the field in order to characterize the flanking transmission of one or several building components. This part of ISO 10848 specifies laboratory and field measurements of buildings where at least one of the elements that form the construction under test is a Type A element (defined in ISO 10848-1). Laboratory measurements are used to quantify the performance of the junction with suppressed flanking transmission from the laboratory structure. Field measurements are used to characterize the in situ performance and it is not usually possible to suppress unwanted flanking transmission; hence the results are primarily representative of the performance of that junction when installed in that particular building structure. The measured quantities can be used to compare different products, or to express a requirement, or as input data for prediction methods, such as ISO 12354-1 and ISO 12354-2.

#### **93 RAJATISED**

#### **prEN 13588**

#### **Bitumen and bituminous binders - Determination of cohesion of bituminous binders with pendulum test**

This European Standard specifies a method for measuring the cohesion of bituminous binders for surface dressing application at temperatures in the range of (- 10 °C) to (+ 80 °C) and for expressing the relationship between cohesion and temperature. This method is applicable for pure bitumen, modified bitumen and fluxed bitumen; in the case of fluxed bitumen, the test can be performed on the binder containing fluxant or on binder from which the solvent has been removed. For bitumen emulsions, the test is carried out on the residual binder obtained after recovery and the method used to recover the binder should be reported. WARNING - The use of this European Standard may involve hazardous materials, operations and equipment. This European Standard does not purport to address all of the safety problems associated with its use. It is the responsibility of the user of this European Standard to establish appropriate safety and health practices and determine the applicability of regulatory limitations prior to use.

### FprEN 50671

**Product standard for electromagnetic fields from household appliances, and similar electrical apparatus used by the public and workers, with regard to human exposure**

The object of this standard is to provide a route for evaluation of household and electrical appliances and similar equipment used in the workplace against limits on human exposure to electric and magnetic fields. This standard applies to equipment containing transformers and power supplies, motors, heating elements, or their combination, such as domestic appliances, light industrial and workplace appliances, electric tools and electric toys. It applies to equipment powered from the mains, by batteries or by any other electrical power source. This standard specifically does not apply to: - apparatus intended to be part of the fixed electrical installation of buildings (such as fuses, circuit breakers, cables and switches); - radio and television receivers, audio and video equipment, and electronic music instruments; - medical electrical appliances; - personal computers and similar equipment; - radio transmitters; - industrial equipment for heating materials using electrical arcs, electric or magnetic fields and/or electromagnetic waves with a frequency below 300 GHz; - wireless or inductive power transfer; - inductive loop systems for T-coil receivers. The frequency range covered is 10 Hz to 400 kHz. It should be noted that the supplier of a specific piece of equipment might not know the overall exposure environment in which the equipment is being used. This product standard can only assess the human exposure from the specific equipment under evaluation. Other standards can apply to products covered by this document. In particular this document is not designed to evaluate the electromagnetic compatibility with other equipment; nor does it reflect any product safety requirements other than those specifically related to human exposure to electromagnetic fields.

**Safety of toys - Part 8: Activity toys for domestic use**

This European Standard specifies requirements and test methods for activity toys for domestic use often attached to or incorporating a crossbeam, and similar toys intended for children under 14 years to play on or in and often intended to bear the mass of one or more children. This European Standard also specifies requirements for: - separately sold accessories for, and components of activity toys; - separately sold swing elements that are ready for use on or in combination with an activity toy; - construction packages for activity toys including components used to build activity toys according to a scheduled building instruction. The scope of this European Standard excludes: - playground equipment intended for public use dealt with in the EN 1176 series; - bow-mounted rocking activity toys such as rocking horses and similar toys, which are covered by specific requirements in EN 71 1; - toy pools with maximum depth of water over 400 mm measured, between the overflow level and the deepest point within the pool; NOTE 1 For information regarding the classification of pools as toys see European Commission guidance document No. 8 from Bibliographical Entry [1]. - pools with maximum depth of water over 400 mm measured, between the overflow level and the deepest point within the pool, without play elements covered by the EN 16582 series; NOTE 2 There is an enhanced risk of drowning in toy pools where the depth of water is in excess of 400 mm. - trampolines for domestic use dealt with in EN 71 14. NOTE 3 Requirements for non-aquatic inflatable activity toys are being elaborated.

## EVS-EN 12732:2013+A1:2014

### Gaasivarustussüsteemid. Terastorustiku keevitamine. Talitluslikud nõuded

See Euroopa standard sisaldab nõudeid mittetoksilise ja mittesööbiva, ISO 13686-le vastava maagaasi ja mittetraditsiooniliste gaaside, nagu sissejuhitav biometaan, maismaal paiknevate varustussüsteemide terastorjuhtmetele ja torustikele, kaasa arvatud töötavad torjuhtmed, paigaldamisel ja täiustamisel kasutatavate keevisiidete valmismisile ja katsetamisele kõigis rõhupiirkondades, kus —torujuhtme elementid on tehtud mittelegeer- või madallegeer-süsiniikterasest; —torjuhu ei asetse äri-või tööstushoonetes kui tehnoloogilise protsessi integreeritud osa, välja arvatud kõik selliseid hooneid varustavad torjuhtmed ja seadmed; —torustik ei asetse standardile EN 1775 vastavas majapidamisvõrgus; —süsteemi arvutustemperatuur on vahemikus -40 °C kuni 120 °C kaasa arvatud Maismaal paiknevate gaasijuhtmed ja torustikud, kaasa arvatud töötavad torjuhtmed, kõigis rõhupiirkondades EN ISO 13686 vastavate mittetoksiliste ja mittesööbivate gaaside transportimiseks ja mittetraditsiooniliste EN ISO 13866 nõudeid täitvate gaaside transportimiseks, igauhele neist on teostatud talitlustike nõuete tehniline hindamine (nagu on sissejuhitav biometaan), tagamaks, et seal ei ole ühtegi gaaside koostisos, mis võib mõjutada torjuhtme integreeritust. Standard ei ole rakendu keeviõmblistele, mis on valmistatud enne selle Euroopa standardi väljaandmist. Tabel 1 määrab rakendusvaldkonnad kvaliteedinõuete kategooriatele funktsioonina töörõhust ja kasutatud toru materjalidest. Lisanõuded võivad olla spetsifitseeritud, näiteks: —pingele torjuhtmetes ja torustikusüsteemides, —materjalidele, —liini trassidele, —projekteerimisele või keevitamise sooritustehnikale kui neid loetakse kriitiliseks. See Euroopa standard spetsifitseerib üldised põhiprintsiibid gaasivarustussüsteemidele. Selle Euroopa standardi kasutajad peaksid olema teadlikud, et CEN liikmesmaades võivad olla enam detailiseeritud rahvuslikud standardid ja/või normid (koodid). Lahkhelide korral, kui rahvusliku seadustiku / reeglistiku nõuded on rangemad käesoleva standardi nõuetest, tuleb eesõigus anda rahvuslikule seadustikule / reeglistikule, nagu on näidatud CEN/TR 13737 (kõik osad). MÄRKUS CEN/TR 13737 (kõik osad) sisaldb: —riigid rakendatavate asjakohaste seadustike/reeglistike selgitamine; —kui on kohane, enam piiravad rahvuslikud nõudeid; —rahvuslik viimase info saamise kontaktipunkt.

## EVS-EN 13142:2013

### Hoonete ventilatsioon - Elamute ventilatsiooni komponendid/tooted – kohustuslikud ja valikulised töö karakteristikud

Käesolev Euroopa Standard määrab ja klassifitseerib komponentide/toodete töö karakteristikud, mis võivad olla vajalikud elamute ventilatsiooni süsteemide projekteerimisel ja dimensioneerimisel, et tagada ettenähtud temperatuuri, õhu kiruse, niiskuse, hõigeeni ja müra mugavuse tingimused viibimistsoonis. See määrab kindlaks need töö karakteristikud (kohustuslikud või valikulised) mis määaratletud, mõõdetud ja esitletud vastavalt asjakohastele katse meetoditele. See esitab klassifitseerimise aluse, mille alusel määratatakse täis mahus toote omadused katse meetoditele ja annab ülevaate Katse Standarditest. Kohustuslike ja valikuliste nõuetega eristamise jäetakse igale rahvuslikule regulatsiooni pädevusse. Kodeerimise osa Lisas A ja klassifitseerimise osa Klausel 4 kohalduvad järgnevatele toodetele: - sisse- ja väljapuhke sundventilatsiooni agregaadid üksikutele eramuutele vastavalt EN 13141-7; - Kanalita sisse- ja väljapuhke sundventilatsiooni agregaadid üksikule ruumile vastavalt EN 13141-8. Käesolev Euroopa Standard ei kohaldu teistele toodetele nagu filtri, tuletõkkeklapp, sulgurusedmed, juhitisseadmed ja mürasummutid, mis võivad olla integreeritud elamu ventilatsiooni. Käesolev Euroopa Standard ei kata Euroopa Direktiivides

käsitletud nõudeid, näiteks: madal pingi direktiiv, EMC direktiiv ja teised nõuded nagu korrosioon, vastupidavus ja lumesisenemine.

#### **Ehitustoodete ja -elementide tuleohutusalane klassifikatsioon. Osa 2: Klassifikatsioon tulepüsivuskatsete alusel, välja arvatud ventilatsioonisüsteemid**

Standard sätestab ehitustoodete ja -elementide klassifitseerimise tulepüsivuse ja suitsupidavuse katsete alusel, nimetatud katsed kuuluvad sellekohase katsemeetodi otsesesse kasutusulatusse. Käesoleva standardi käsitlusalaasse kuulub ka katsetulemuste laiendatud kasutusulatusel põhinev klassifikatsioon. Standardi käsitlusalaasse kuuluvad: a) tuletökkefunktsioonita kandvad elemendid: seinad, põrandad, katused, talad, postid, rödud, käiguteed, trepid; b) tuletökkefunktsiooniga kandvad elemendid, klaasidega või klaasideta, käitus- ja kinnitusvahendid: seinad, põrandad, katused, töstetavad põrandad; c) ehitustoodete ja -elementide või nende osade kaitseks ette nähtud tooted ja süsteemid: tulepüsivusfunktsioonita laed, tulekatsevärvid, viimistluskihid ja ekraanid; d) mittekandvad ehitustooted ja -elemendid, klaasidega või klaasideta, kasutus- ja kinnitusvahendid: vaheseinad, fassaadid (riipseina monteeritavad paneelid) ja välisseinad, tulepüsivusega laed, töstetavad põrandad, tuletökkeuksed ja luugid ning nende sulused, suitsutöökkeuksed, konveiersüsteemid ja nende sulgurosad, läbiviigud, vuugitääted, tehnopüstikud ja šahtid; e) tuldökestavad seina- ja laekatted; f) käesolevast standardist on välja jäetud liftiuksed, mida on katsetatud vastavalt standardile EN 81-58. Liftiuki, mida on katsetatud vastavuses standardiga EN 1634-1, klassifitseeritakse vastavuses jaotisega 7.5.5. Asjakohased katsemeetodid on loetletud jaotistes 2 ja 7.

#### **Ehitustoodete ja -elementide tuleohutusalane klassifikatsioon. Osa 5: Katusekatete klassifikatsioon tuletundlikkuse katsete alusel**

See Euroopa standard käitleb katuste/katusekatete tuletundlikkuse klassifikatsiooni, tuginedes standardis CEN/TS 1187:2012 toodud neljale katsemeetodile ning asjakohastele laiendatud kasutusulatuse reeglitele. Katuste/katusekatete klassifitseerimisel tuleb kasutada ainult neid katsemeetodeid ning neid kasutusulatuse reegleid, mida vastavas klassifikatsioonis vaadeldakse. Tooteid käsitletakse nende löpprakenduse alusel. MÄRKUS Vahetegemine järsu kallakuga katuste ja fassaadide vahel rakendatava katse- ja klassifikatsiooni standardi kontekstis võib olla reguleeritud rahvuslike eeskirjadega. Üldteave standardis CEN/TS 1187 toodud nelja katsemeetodi kohta on esitatud lisas A.

### **EVS-EN 14081-1:2016**

#### **Puitkonstruktsioonid. Nelinurkse ristlöikega tugevussorditud ehituspuit. Osa 1: Üldnõuded**

See Euroopa standard määrab kindlaks nõuded nelinurkse ristlöikega tugevussorditud ehituspuidule, mis on kas visuaalselt või masinal sorditud, töödeldud saagimise, hööveldamise või muude meetoditega ja mille ristlöike mõõtmel vastavad standardile EN 336 (nimetatud ehituspuiduks järgnevates jaotistes). See Euroopa standard sisaldab tingimus katsemeetoditele, teostuse püsivuse hindamist ja töendamist ning ehituspuidu märgistamist. MÄRKUS 1 Masintugevussorditud puidule on antud lisatingimused tüübikatsetustele (TT) standardis EN 14081-2 ja ettevõtte tootmisohjele (FPC) standardis EN 14081-3. MÄRKUS 2 Heaksiidu protseduur partii verifitseerimiseks, mida võib kasutada ehituspuidu tarnimisel, on antud standardis EN 14358. See Euroopa standard identifitseerib need näitajad, millele tuleb kehtestada piirväärtused visuaalsortimise standardites. See Euroopa standard hõlmab ehituspuitu, mis on immutamata või immutatud bioloogiliste kahjustuste välimiseks. See Euroopa standard ei hõlma: — tuletökke teostuse parandamiseks tulekatsevahenditega immutatud puitu; — termiliselt ja/või keemiliselt modifitseeritud puitu; — sõrmjätkatud ehituspuitu.

## EVS-EN 14351-1:2006+A2:2016

### Aknad ja uksed. Tootestandard, toodete omadused. Osa 1: Aknad ja välisuksed

See Euroopa standard määratleb mis tahes materjalist akendele (kaasa arvatud katuseaknad, välistuletundlikkusomadustega katuseaknad ja akenuksed), välistele käiguustele (ja eritarnetest ukseplokkidele, kaasa arvatud lengideta klaasuksed ja evakuatsiooniuksed) ja kaitsevõredele rakenduvad toimivusomadused, välja arvatud tulepüsivus- ja suitsupidavusomadused. Käiguuste ja avatavate akende tulepüsivus- ja/või suitsupidavusomadused on esitatud standardis EN 16034. Euroopa standard rakendub järgmistele toodetele: a) mitteavatavad aknad või mitteavatava raamiga aknad, vertikaalsetesse seinaavadesse paigaldatavad käs- või masinkäitusega aknad ja akenuksed ning kaitsevõred ja katustesse paigaldatavad katuseaknad, mis on komplekteeritud: 1) asjakohaste akna- ja uksetarvikutega, kui neid kasutatakse; 2) ilmastikutihenditega, kui neid kasutatakse; 3) klaasitud avadega, kui need on ette nähtud; 4) sisseehitatud ribi-/rullkardinat ja/või luukidega või ilma nendeta ja käs- või masinkäitusega aknad, katuseaknad, akenuksed ja kaitsevõred, mis on 5) täielikult või osaliselt klaasitud, kaasa arvatud läbipaistmatud täited; 6) täielikult või osaliselt mitteavanevad või ühe või mitme raamiga avanevad (nt pöörd-, liug-, telg-, lükandaknad). b) käsikäitusega siledate või tahvellehtedega välisuksed, mis on komplekteeritud: 1) ülaakendega, kui neid kasutatakse; 2) külgnedevate osadega, kui neid kasutatakse, mis paiknevad ühises lengis ja paigaldatakse ühte seinaavasse. Selles standardis käsitletavaid aknaid ei hinnata nende avanemisvõime seisukohta. Selles standardis käsitletavaid tooteid ei loeta kandeelementideks. Euroopa standard ei hõlma: — standardite EN 1873 ja EN 14963 kohaseid katuste valguskupleid; — standardi EN 13820 kohased rippfassaade; — standardi EN 13241-1 kohased tööstus-, komerts-, garaažiuki ja -väravaid; — standardi prEN 14351-2 kohased siseuksi; — karusselluki; — standardi EN 16361 kohased masinkäitusega käiguuksi; — siseste vaheseinte osadeks olevaid aknaid.

### Meditsiinilised varustusmoodulid

201.1 Käsitlusala, eesmärk ja seotud standardid Rakendub IEC 60601-1:2005+A1:2012, peatükk 1 välja arvatud järgmistel tingimustel: 201.1.1 Käsitlusala IEC 60601-1:2005+A1:2012, 1.1 on asendatud järgnevate punktidega: Käesolev rahvusvaheline standard rakendub MEDITSIINILISTE VARUSTUSMOODULITE (edaspidi ka EM-SEADMETE) ESMASELE OHUTUSELE ja OLULISTELE TOIMIMISNÄITAJATELE. Käesolev rahvusvaheline standard rakendub MEDITSIINILISTE VARUSTUSMOODULITE, mis on toodetud tehases või kokku pandud kohapeal; kaasa arvatud korpused ja teised KESTAD, mis hõlmavad endas PATSIENDI ravi teenuseid. MÄRKUS 1 Osapoolt, kes monteerib kohapeal erinevad patsiendi raviteenuste osutamiseks mõeldud komponendid ühe KESTA alla, nimetatakse MEDITSIINILISE VARUSTUSMOODULI TOOTJAKS. Käesolevale standardile kohalduvate EM-SEADMETE või EM-SÜSTEEMIDE sihipärasest funktsionist tulenevaid OHTE ei ole selle rahvusvahelise standardi täpsustavate nõuetega hulgas, välja arvatud standardi IEC 60601-1:2005+A1:2012 jaotistes 7.2.13 ja 8.4.1 (vaata punkti 201.1.4) toodu. MÄRKUS 2 vaata lisaks IEC 60601-1:2005+A1:2012, 4.2. 201.1.2 Eesmärk IEC 60601-1:2005+A1:2012, 1.2 on asendatud järgnevaga: Selle rahvusvahelise standardi eesmärk on sätestada erinõuded MEDITSIINILISTE VARUSTUSMOODULITE ESMASELE OHUTUSELE ja OLULISTELE TOIMIMISNÄITAJATELE, mis on määratletud jaotises 201.3.103. 201.1.3 Seotud standardid 201.1.3.1 Kollateraalstandardid IEC 60601-1:2005+A1:2012, 1.3 kehtib järgnevate täiendustega: See eristandard viitab nendele kohaldatavatele kollateraalstandarditele, mis on toodud nii IEC 60601-1:2005+A1:2012 peatükis 2 kui ka käesoleva erinõuete standardi jaotises 201.2. IEC 60601-1-3:2008, IEC 60601-1-8:2006+A1:2012, IEC 60601-1-9:2007, ja IEC 60601-10:2007+A1:2013 ei kohaldu. MÄRKUS Kollateraalstandardite viidatakse nende dokumendi numbrite alusel. 201.1.3.2 Eristandardid IEC 60601-1:2005+A1:2012, 1.4 kehtib järgnevate täiendustega: Käesoleva eristandardi sektsoonide, peatükki ja jaotiste numeratsioon, eesliitega "201" vastab IEC 60601-1:2005+A1:2012 standardile (näiteks 201.1 käesolevas standardis viitab IEC 60601-1:2005+A1:2012 peatükki 1 sisule) või kohaldatavatele kollateraalstandarditele, mille korral kasutatakse eesliidet "20x". Viimasel juhul vastab x kollateraalstandardi viimas(t)elete numbri(te)eile (näiteks 202.4 käesolevas eristandardis viitab kollateraalstandardi IEC 60601-1-2 peatükki 4 sisule, 203.4 käesolevas eristandardis viitab kollateraalstandardi IEC 60601-1-3 peatükki 4 sisule jne). IEC 60601-1:2005+A1:2012 sisu muudatused on täpsustatud järgmisi määratlusi kasutades: — "Asendus" tähendab, et IEC 60601-1:2005+A1:2012 peatükk või jaotis või kohaldatav kollateraalstandard on asendatud täies mahus selle eristandardi tekstiga. — "Täiendus" tähendab, et selle eristandardi tekst on lisatud IEC 60601-1:2005+A1:2012 ja kohaldatavate kollateraalstandardite nõuetele. — "Muudatus" tähendab, et IEC 60601-1:2005+A1:2012 või kohaldatava kollateraalstandardi peatükk või jaotis on muudetud käesoleva eristandardi tekstis kirjeldatud määral. Jaotised või joonised, mis on täienduseks IEC 60601-1:2005+A1:2012 standardile, on nummerdatud alates väärustusest 201.101. Täiendavad lisad on tähistatud tähekombinatsioonidega AA, BB, jne ning täiendavad lootelud kombinatsioonidega aa, bb, jne. Jaotised või joonised, mis on täienduseks kollateraalstandardile, on nummerdatud alates väärustusest 20x, kus x tähistab kollateraalstandardi numbrit. Näiteks IEC 60601-1-2 korral tähistatakse 202-ga, IEC 60601-1-3 korral tähistatakse 203-ga jne. Terminit "see standard" kasutatakse viitamisel IEC 60601-1:2005+A1:2012 standardile, mistahes kohaldatavate kollateraalstandardile ja käesolevale eristandardile koosvõetuna. Olukordades, mil käesolevas eristandardis ei eksisteeri vastavat sektsooni, peatükki või jaotist, rakenduvad IEC 60601-1:2005+A1:2012 või kohaldatavate kollateraalstandardite vastavad sektsoonid, peatükid või jaotised muutmata kujul isegi siis, kui see ei pruugi olla selles kontekstis oluline. Olukordades, mille puhul ei ole IEC 60601-1:2005+A1:2012 või kohaldatavate kollateraalstandardite osad kavandatult

rakendatavad isegi juhtudel, kui selle osa võiks olla sisuliselt oluline, siis on selle kohta toodud ka vastavasuline deklaratsioon käesolevas eristandardis.

## **EVS-EN ISO 13485:2016**

### **Meditsiiniseadmed. Kvaliteedijuhtimissüsteemid. Normatiivsed nõuded**

See rahvusvaheline standard spetsifitseerib nõuded kvaliteedijuhtimissüsteemile juhul kui organisatsioon peab näitama oma suutlikkust pakkuda meditsiiniseadmeid ja sellega seotud teenuseid, mis järjekindlalt vastavad kliendi nõuetele ja kohalduvatele regulatiivnõuetele. Need organisatsioonid võivad olla tegevad ühes või mitmes meditsiiniseadme elutsükli etapis, sealhulgas meditsiiniseadmete kavandamisel ja arendamisel, tootmises, säilitamisel ja levitamisel, installeerimisel või seotud tegevuste (näiteks tehniline toetus) kavandamisel, arendamisel või tarnimisel. Seda rahvusvahelist standardit võivad kasutada ka tarnijad ja välis-ospooke, kes pakuvad nendele organisatsioonidele tooteid, sealhulgas ka kvaliteedijuhtimissüsteemiga seotud teenuseid. Selle rahvusvahelise standardi nõuded on kohaldatavad organisatsioonidele vaatamata nende suurusele või tüübile, välja arvatud neil juhtudel, kui see erand on selgelt sätestatud. Kui on määratletud, et mingi nõue rakendub meditsiiniseadmele, siis see nõue rakendub samasuguselt ka seotud teenustele, mida organisatsioon tarnib. Selle rahvusvahelise standardi poolt nõutud protsessid, mis kohalduvad organisatsioonile, kuid mida see organisatsioon ise ei teosta, on organisatsiooni vastutusalas ja neid võetakse arvesse organisatsiooni kvaliteedijuhtimissüsteemis protsesside seire, käigushoidmise ja juhtimise läbi. Kui kohalduvad regulatiivnõuded lubavad kavandamise ja tootearenduse juhtimise jäätta käsitusest välja, siis seda asjaolu võib kasutada nende kvaliteedijuhtimissüsteemist väljajätmise põhjendusena. Need regulatiivnõuded võivad pakkuda alternatiivseid lähenemisi, mida on vaja käsitleda kvaliteedijuhtimissüsteemis. Organisatsiooni kohustus on tagada, et väited vastavuse kohta sellele rahvusvahelisele standardile kajastavad kõiki erandeid kavandamise ja tootearendamise käsitlemisel. Juhul kui mõni käesoleva rahvusvahelise standardi peatükki 6, 7 või 8 nõuetest ei ole rakendatav organisatsiooni tegevuse iseloomu töttu või selle meditsiiniseadme omaduste töttu, millele kvaliteedisusteemi rakendatakse, siis organisatsioon ei pea viima sellist nõuet oma kvaliteedijuhtimissüsteemi. Organisatsioon paneb kirja vastava põhjenduse (vastavalt jaotisele 4.2.2) selle standardi iga nõude kohta, mille puul on kindlaks tehtud selle mittekohaldumine.

### **Keevitusmaterjalid. Traatelektroodid ja keevismetallid legeerimata ja peenterateraste kaarkeevituseks kaitsegaasis. Liigitamine**

See Rahvusvaheline Standard määratleb nõuded keevitustraatide ja keevismetalli liigitamiseks keevitusjärgses seisundis ja keevitusjärgse termotöötluuse järgses seisundis legeerimata ja peenterateraste, minimaalse voolavuspriiriga kuni 500 MPa või minimaalse tömbetugevusega kuni 570 MPa, kaitsegaasis kaarkeevitamisele. Üks keevitustraat võib olla katsetatud ja liigitatud erinevate kaitsegaasidega. See Rahvusvaheline Standard sisaldb kombineeritud määratlust andes ligituse, mis kasutab keevismetalli voolavuspriiri ja keskmisel purustustööl 47 J põhinevat süsteemi, või keevismetalli tömbetugevuse ja purustustööl 27 J põhinevat süsteemi. a) Liitega „A“ jaotised ja tabelid on rakendatavad ainult keevitustraatidele, mis on liigitatud vastavuses käesoleva Rahvusvahelise Standardiga keevismetalli voolavuspriiri ja keskmisel töögisitkul 47 J põhineva süsteemi järgi. b) Liitega „B“ jaotised ja tabelid on rakendatavad ainult keevitustraatidele, mis on liigitatud vastavuses käesoleva Rahvusvahelise Standardiga keevismetalli tömbetugevuse ja keskmisel töögisitkul 27 J põhineva süsteemi järgi. c) Ilma liiteta „A“ või „B“ jaotised ja tabelid on rakendatavad kõikidele keevitustraatidele, mis on liigitatud vastavuses käesoleva Rahvusvahelise Standardiga.

## FprEN 998-1

### Müürimörtide spetsifikatsioon. Osa 1: Krohvimört

Euroopa standard rakendub tehases valmistatud anorgaaniliste sideainete põhistele krohvimörtidele, mida kasutatakse nii väliskui ka sisetingimustes seinte, lagede, postide ja vaheseinte krohvimisel. Standard sisaldab määratlusi ja lõoptoote toimivusnõudeid. See Euroopa standard esitab standardiga hõlmatud toodete toimivuse püsivuse hindamise ja kontrollimise (AVCP) menetluse. Standard sisaldab ka selle Euroopa standardiga hõlmatud toodete märgistuse nõudeid. Standard ei hõlma mörte, mille põhiline sideaine on kips. Kipsi võib kasutada koos õhklubjaga kui täiendavat sideainet. Kui põhiline sideaine on õhklubi, siis kuulub krohvimört Euroopa standardi käsituslassesse. Kui põhiline sideaine on kips, siis kuulub krohvimört standardi EN 13279 käsituslassesse. See Euroopa standard ei käsitle spetsiaalseid tulekindlaid ja akustiliste eriomadustega mörte, mörte konstruktsioonide parandamiseks ega ehituselementide pindade töötlemiseks, nagu tasandus- või sobitusmõrdid, värvid, katted, õhukesekihilised orgaanilised krohvid ja valmisselementid (nt krohvplaadid). Selle Euroopa standardi käsituslassesse kuuluvad jaotises 3 määratletud krohvimõrdid, välja arvatud need, mis valmistatakse ehitusplatsil. Euroopa standardit või selle osi on siiski võimalik kasutada ehitusplatsil valmistatavaid mörte käsitlevates rakendusjuhistes ja riigisisestes spetsifikatsioonides.

## FprEN 998-2

### Müürimörtide spetsifikatsioon. Osa 2: Müürimört

See Euroopa standard spetsifitseerib müüritud seintes, postides ja vaheseintes (nt viimistlus- ja fassaadimüüritis) hoonete ja rajatiste kandvates ja mittekandvates müüritikonstruktsioonides) kasutatavatele tehases valmistatud müürimörtidele (sängitamiseks, vuukide täitmiseks ja vuukimiseks) esitatavad nõuded. See Euroopa standard määratleb kasutusvalmis mõrdi järgmised toimivusomadused: kasutatavusaeg, kloriidisisaldus, õhusisaldus, tihedus ja korrigeerimisaeg (ainult peenteramõrtidel). Kivistunud mõrdi puhul määratleb standard järgmised toimivusomadused: survevägevus, nakketugevus ja tihedus, mille määramisel kasutatakse vastavaid Euroopa standardites esitatud katsemeetodeid. See Euroopa standard esitab standardiga hõlmatud toodete toimivuse püsivuse hindamise ja kontrollimise (AVCP) menetluse. Standard sisaldab ka selle Euroopa standardiga hõlmatud toodete märgistusele esitatavaid nõudeid. Selle Euroopa standardi käsituslassesse kuuluvad jaotises 3 määratletud müürimõrdid, välja arvatud ehitusplatsil valmistatavad. Standardit või selle osi on siiski võimalik kasutada ehitusplatsil valmistatavaid mörte käsitlevates rakendusjuhistes ja riigisisestes spetsifikatsioonides.

### Mänguväljaku seadmed ja aluspind. Osa 3: Täiendavad spetsiaalsed ohutusnõuded ja katsemeetodid liumägedele

See Euroopa standard määrab kindlaks täiendavad nõuded liumägedele, mis on möeldud püsivalt paigaldatuna lastele kasutamiseks. Eesmärgiks on tagada kasutajale kaitse võimalike ohtude eest kasutamise käigus. Seal, kus peamiseks mänguliseks tegevuseks ei ole liulaskmine, võidakse sobivuse korral kasutada standardi EN 1176 käesoleva osa asjakohaseid nõudeid. See dokument ei ole rakendatav vee-liumägedele, rolleriradadele või paigaldatud liumägedele, mille puhul kasutatakse täiendavaid seadmeid nagu matid ja kelgud. Käesolev dokument ei ole rakendatav kalpindadele, mis ei mahuta endas kasutajat ega suuna tema liikumist, näiteks käsipuud (paralleelsed kaldega latid).

## **prEN 50849**

### **Häireteadustuse helisüsteemid**

Käesolev Euroopa standard määrab kindlaks tehnilised nõuded helisüsteemidele, mille kõige tähtsam funktsioon on elude päästmiseks vajaliku teabe edastamine ühel või mitmel kindlaksmääratud häirealal. See esitab ka süsteemi spetsifikatsiooni määramiseks vajalike omaduste kogumi ja katsemeetodid. Käesolev Euroopa standard kehtib helivõimendus- ja helijaotussüsteemide kohta, mida kasutatakse ehitiste sise- ja välisterritoriumil viibivate inimeste kiireks ja plaanikohaseks mobiliseerimiseks häireolukorras, sh süsteemide kohta, milles kasutatakse kölareid, et edastada kõneteateid häireolukorra teatavaks tegemiseks, või tähelepanu- või toonhelisignaale. Käesolev Euroopa standard ei kehti tulekahju korral kasutatavatele häireteadustussüsteemidele, ükskõik kas need on ühendatud automaatsesse tulekahjusignalisaatoritega. MÄRKUS 1 Pole välalistatud sama süsteemi kasutamine tavapärase kasutuseesmärgiga helivõimendus- ja helijaotussüsteemina. Kui süsteemi kasutatakse häireteadete edastamiseks, on soovitatav, et see kuuluks kindla osana häireolukordade haldusstruktuuri (seadmed, töökord ja koolitusprogrammid). MÄRKUS 2 Häireteadustuse helisüsteemidele võib vastutav ametkond kohaldada heakskiidunõudeid.

## **prEVS-ISO/IEC/IEEE 15288**

### **Süsteemi- ja tarkvaratehnika. Süsteemi elutsükli protsessid**

ISO/IEC/IEEE 15288:2015 establishes a common framework of process descriptions for describing the life cycle of systems created by humans. It defines a set of processes and associated terminology from an engineering viewpoint. These processes can be applied at any level in the hierarchy of a system's structure. Selected sets of these processes can be applied throughout the life cycle for managing and performing the stages of a system's life cycle. This is accomplished through the involvement of all stakeholders, with the ultimate goal of achieving customer satisfaction. ISO/IEC/IEEE 15288:2015 also provides processes that support the definition, control and improvement of the system life cycle processes used within an organization or a project. Organizations and projects can use these processes when acquiring and supplying systems. ISO/IEC/IEEE 15288:2015 concerns those systems that are man-made and may be configured with one or more of the following system elements: hardware, software, data, humans, processes (e.g., processes for providing service to users), procedures (e.g., operator instructions), facilities, materials and naturally occurring entities.

# **ALGUPÄRASTE STANDARDITE JA STANDARDILAADSETE DOKUMENTIDE KOOSTAMINE**

Alljärgnevalt on toodud teave möödunud kuu jooksul Standardikeskusele esitatud algupäraste standardite ja standardilaadsete dokumentide koostamis-, muutmis- ja uuostöötusettepanekute kohta, millega algatatakse Eesti algupärase dokumendi koostamise protsess.

Rohkem infot koostatava dokumendi kohta saab EVS-i standardiosakonnast: standardiosakond@evs.ee.

Igakuiselt uuendatav teave eestikeelsena avaldatavate Eesti standardite kohta, sh eeldatavad kommenteerimise ja avaldamise tähtpäevad, on leitav Standardikeskuse veebilehel avaldatavast standardimisprogrammist.

## **prEVS 935-1**

**Jalakäijate ülekäiguradade (teekattemärgis 945a) valgustus lisavalgustusega. Osa 1: Kvaliteedi üldnäitajad ja juhisväärused**

**Lighting of pedestrian crossings (road marking sign 945a) with additional lighting - Part 1: General quality characteristics and guide values**

See standard kehtib jalakäijate ülekäiguradade kohta, millel on ette nähtud lisavalgustus.

Koostamisettepaneku esitaja: EVS/TK 24

## **prEVS 935-2**

**Jalakäijate ülekäiguradade (teekattemärgis 945a) valgustus lisavalgustusega. Osa 2:**

**Arvutamine ja mõõtmine**

**Lighting of pedestrian crossings (road marking sign 945a) with additional lighting - Part 2: Calculation and measurement**

See standard sätestab, mil viisil tuleb arvutada ja mõõta standardis DIN 67523-1 esitatud kvantitatiivselt käsitatavaid valgustehnilisi kvaliteedinäitajaid. Särestused on vajalikud, et arvutusi võrreldavalt ja mõõtmisi ühetaoliselt sooritada saaks.

Koostamisettepaneku esitaja: EVS/TK 24

## TÜHISTAMISKÜSITLUS

Selles rubriigis avaldame teavet Euroopa standardimisorganisatsioonides algatatud Euroopa standardite tühistamisküsitluste kohta ning rahvusvahelise alusstandardiga Eesti standardite ja Eesti algupäraste dokumentide tühistamisküsitluste kohta. Küsitluse eesmärk on välja selgitada, kas alljärgnevalt nimetatud standardite ja standardilaadsete dokumentide jätkuv kehtimine Eesti ja/või Euroopa standardina/dokumendina on vajalik.

Allviidatud standardite ja dokumentide kehtivana hoidmise vajalikkusest palume teavitada EVS-i standardiosakonda (standardiosakond@evs.ee).

**Teraviljasaadused. Magnetilise metallilisandi määramine**

**Cereal products - Determination of magnetic metal admixture**

Selles Eesti standardis kirjeldatakse teraviljasaaduste (jahu, tangained ja kliid) magnetilise metallilisandi määramise meetodeid.

## **EVS 807:2016**

**Teraviljasaadused. Fraktsioonilise koostise, lisandite, jämeduse ja tangu kvaliteetse tuuma määramine**

**Cereal products - Sieve analysis of fractions, determination of admixture content, particle size and sound kernels in groats**

Selles Eesti standardis kirjeldatakse jahu ja tangainete (sh lihvitud hernes) jämeduse ning tangainetes leiduvate lisandite ja kvaliteetse tuuma määramist. MÄRKUS Lisandite määramist riisitangus käsitleb standard EVS-ISO 7301:2011 „Riis. Tehnilised tingimused“.

## **EVS 929:2016**

**Kinnisvarakeskkonna juhtimine ja korras hood**

**Management and Maintenance of Facilities**

See standard avab kinnisvarakeskkonna juhtimise olemuse. Iga kinnisvaraobjekti omanik oma otsuste ja rahastamisega tagab temale kuuluval kinnisvaraobjektil kinnisvarakeskkonna ohutuse (üldmõistes: korras hoio) ja kasutatavuse nii ühiskonnale kui ka konkreetsetele lõppkasutajatele. Sobiliku kinnisvarakeskkonna tagamiseks on vaja teha eri tegevusi, mille elluviimisel kasutatakse üldjuhul vastava ettevalmistusega erialaspetsialiste. Standardis koostatud tegevuste klassifikaator on vajalik omanikule eelkõige selleks, et saada aru kinnisvaraobjektiga seotud tegevuste ulatusest – omand alati kohustab. Ühiskonnas kehtivad eri tasandite õigusaktid, mis reglementeerivad miinimumnõudeid korras hoioiga seotud tegevustele ja nende tulemustele. Konkreetse kinnisvaraobjekti omanik võib alati taotleda soovi korral kõrgemat kvaliteeti kui vaid miinimumnõuetele vastavust. Korras hoiouteenuse osutamisel lähtuvad lepingupooled võlaõigusseaduses sätestatud käsunduslepingu või töövõtulepingu regulatsioonist, olenevalt valitud lepingu vormist. Standardi koostisosaks olev tegevuste klassifikaator on samuti vajalik kinnisvaraobjektiga seotud kulude analüüsimeks ja nende kulude jaotamiseks objektiga seotud poolte vahel. Standard esitab valdkonnaga seotud põhimõisted, kirjeldab kinnisvarakeskkonna juhtimise ratsionaalset ja kvaliteetset korraldamist, sellega kaasnevad infovajadust ja dokumenteerimist ning kaasnevaid kulusid. Selle standardi järgimine on vabatahtlik, kuni seda ei ole kohustuslikeks tehtud nt õigusaktiga või lepingupoolte vahelise kokkuleppega.

## **EVS-EN 10223-8:2013**

**Tarkvõrk. Terminoloogia**

**Smart grid. Terminology**

Dokument esitab tarkvõrgu põhimõtete ja komponentide kirjeldamisel kasutatavad terminid ja määratlused, mis on olulised tarkvõrku liidetavate intelligentsete elektronseadmete struktureeritud andmemudelite koostamisel, tüüpiliste rakenduste funktsionaalse arhitektuuri täiustamisel, juhtimissüsteemide vahelisel kooskõlastatud infovahetusel ning põhilistes rollides toimivate tarkvõrgu subjektide omavahelisel suhtlemisel.

## **EVS-EN 10223-8:2013**

**Terastraat ja traattooted piirete ja punutiste valmistamiseks. Osa 8: Keevisvõrgust gabioontooted**

**Steel wire and wire products for fencing and netting - Part 8: Welded mesh gabion products**

1.1 Objekt See Euroopa standard spetsifitseerib nõuded keevisvõrgust gabioontoodete (kivikorvide) valmistamiseks kasutatavate keevisvõrkude mehaanilistele omadustele, mõõtmetele, pinnakattekihtidele ning katsemeetodid ja tarnetingimused. Keevisvõrgust gabiooni all mõistetakse üldiselt keevitatud traatvõrgust mahutit, mis täidetakse kividite või muu sobiva materjaliga. See dokument hõlmab ainult metallist mahutite omadusi. Täitematerjale, näiteks graniitkive, käsitletakse teistes standardites. See dokument hõlmab keevitatud traatvõrkudest gabioone ja nende tarvikuid, mis on kaetud tsinkpinnakattega (nt kuumsukelmeetodil) või tsink-alumiiniumsulamiga, polüvinüükloriidiga (PVC) või on valmistatud roostevabast terasest. Tarvikute hulka kuuluvad

näiteks ühendusspiraalid, röngad, sidumistraadid, tõmbeverdad või distantsihoidikud. 1.2 Otstarbekohane kasutus Käsitletavad ehitustooted on ette nähtud pinnase stabiliseerimiseks, kasutamiseks pinnase kindlustussüsteemides, veevoolu suunamiseks, erosiooni välimiseks, nõlvade kindlustamiseks, helibarjääride rajamiseks, tarastamiseks, maaistiku kujundamiseks, kasutamiseks kattekihi ja fassaadikatetena, ka arhitektuursetel eesmärkidel. Alltoodud joonisel 1 on kujutatud mõningaid asjakohaseid gabionide kasutusvõimalusi.

#### EVS-EN 12101-3:2015

**Suitsu ja kuumuse kontrollsüsteemid. Osa 3: Suitsu ja kuumuse eemaldamise sundventilatsiooniseadmete spetsifikatsioon**

**Smoke and heat control systems - Part 3: Specification for powered smoke and heat control ventilators (Fans)**

See Euroopa standard täpsustab ehitiste suitsu ja kuumuse eemaldamise ventilatsioonisüsteemi osana kasutamiseks ette nähtud suitsu ja kuumuse eemaldamise sundventilatsiooniseadmete (ventilaatorite) tooteomadusi. Standard esitab ka omaduste katse-ja hindamismeetodid ning katsete hindamise tulemuste vastavuskriteeriumid. Seda Euroopa standardit kohaldatakse alljärgnevale: a) suitsu ja kuumuse eemaldamise ventilatsiooniseadmed, b) suitsu ja kuumuse eemaldamise impuls-/reaktiivventilaatorid.

#### EVS-EN 13201-4:2015

**Teevalgustus. Osa 4: Valgusliku toimivuse mõõtmeetodid**

**Road lighting - Part 4: Methods of measuring lighting performance**

See Euroopa standard sätestab mõõtmistingimused ja -protseduurid teevalgustuspaigaldiste fotomeetriliste kvaliteedinäitajate mõõtmiseks, s.t nende suuruste mõõtmiseks, mis määradavat nende paigaldiste toimivuse standardis EN 13201-2 määratletud valgustusklasside järgi. Teevalgustuspaigaldiste energiatõimivust iseloomustavaid parameetreid seejuures ei arvestata. Metodoloogia, mis võimaldab hinnata teevalgustuspaigaldiste toimivust, arvestades projekteerimisparameetrite tolerantse, on kirjeldatud teatmelas A.

#### EVS-EN 13201-5:2015

**Teevalgustus. Osa 5: Energiatõhususnäitajad**

**Road lighting - Energy performance indicators**

See Euroopa standardisarja osa määratleb, kuidas arvutada teevalgustuspaigaldiste energiatõhususnäitajaid, kasutades arvutatud erivõimsusnäitajat DP ja arvutatud aastast energiatarbimisnäitajat DE. Erivõimsusnäitaja DP näitab teevalgustuspaigaldise tarbitavat võimsust, kui see täidab standardis EN 13201-2 esitatud vastavaid valgustusnõudeid. Aastane energiatarbimisnäitaja DE määratleb aastase energiatarbimise ka siis, kui valgustusnõuded öö või aastaaja jooksul muutuvad. Neid näitajaid võib kasutada tänavavalgustuse ühe ja sama projektiga eri lahendustega ja tehniliste võimalustega energiatõhususe võrdlemiseks. Erisuguse teegeometria või valgustusnõuetega teevalgustussüsteemide energiatõhusust ei saa omavahel otseselt võrrelda, kuna energiatõhusust mõjutavad muu hulgas valgustatava piirkonna geomeetrilised andmed ning valgustusnõuded. Erivõimsusnäitaja DP ja aastane energiatarbimisnäitaja DE on rakendatavad kõigi liikluspõirkondade kohta, mis kuuluvad standardiga EN 13201-2 määratletud valgustusklassidesse M, C ja P.

#### EVS-EN 13445-5:2016

**Leekuumutuseta surveanumad. Osa 5: Kontroll ja katsetamine**

**Unfired pressure vessels - Part 5: Inspection and testing**

See Euroopa standardi osa määrab kindlaks standardi EN 13445-2:2014 järgi terastest üksikult ja seeriaviisiliselt toodetavate surveanumate kontrollimise ja katsetamise. Erisätted tsüklilise talitluse kohta on toodud selle standardi lisas G. Erisätted mahutite ja mahutite osadele töötamisel roomavuse tingimustes on toodud selle standardi lisas F ja lisas I. MÄRKUS Vastavushindamise protseduuri osaliste vastutusalad on toodud direktiivil 97/23/EÜ. Juhised selle kohta leiab dokumentist CR 13445-7.

#### EVS-EN 13859-1:2014

**Painduvad hüdroisolatsioonimaterjalid. Aluskatete määratlused ja omadused. Osa 1:**

**Tükkmaterjalidest katuste aluskatted**

**Flexible sheets for waterproofing - Definitions and characteristics of underlays - Part 1:**

**Underlays for discontinuous roofing**

See Euroopa standard spetsifitseerib plaat- ja tükkmaterjalidest katusekatete painduvate aluskatete omadused. Standard spetsifitseerib nõuded ja katsemeetodid ning näeb ette toodete vastavuse hindamise standardis toodud nõuetekohaselt.

#### EVS-EN 13914-1:2016

**Krohvide projekteerimine, valmistamine ja pealekandmine. Osa 1: Väliskrohv**

**Design, preparation and application of external rendering and internal plastering - Part 1:**

**External rendering**

See Euroopa standard spetsifitseerib nõuded ja soovitused väliskrohvide, — mis põhinevad tsemendil, lubjal või teistel mineraalsetel sideainetel ja/või nende kombinatsioonidel, standardile EN 998-1 vastaval müüritsemendil ja polümeermodifitseeritud sideainel või objektikrohvidel; — mis põhinevad standardile EN 15824 vastavatel orgaanilistel sideainetel projekteerimiseks, valmistamiseks ja pealekandmiseks kõigi tavaliste aluspinnna tüüpide korral. Standard hõlmab nii uute kui ka vanade aluspindade krohvimist ja olemasolevate objektide hooldamist ja parandamist. See dokument annab juhiseid

ehitusobjektil, tehases ja poolfabrikaadina tehases valmistatavate tunnustatud krohvide kasutamise kohta. See dokument ei hõlma: a) vettpidavate tarindite ehitamiseks ettenähtud erikrohvide kasutamist ja pealekandmist, nt kattekihid, ja vooderdusplaadisüsteemide aluspindu; b) betoonist kandekonstruktsioonide parandamist; c) väliste krohvitud soojusisolatsiooni liitsüsteemide (External Thermal Insulation Composite System, ETICS) paigaldamist; d) krohvimisega seonduvate vuukide tihendamiseks kasutatavate tihendussegude spetsifitseerimist ja kasutamist; e) kipsipõhiste väliskrohvide kasutamist, mis võib olla mõnes riigis lubatud; Kestvalt niisketes tingimustes muutub kipsipõhine krohv pehmeks. Taolistele toodete kasutamine vällistingimustes oleneb kasutuskoha klimaatilistest tingimustest ja kohalikest ehitustraditsioonidest. Mõned kuiva kliimaga Lõuna-Euroopa riigid välja arvatud, ei soovitata kipsipõhiseid krohve üldiselt vällistingimustes kasutada, mistõttu on nad ka selle dokumendi käsitlusala välja jäetud. Sellele vaatamata võib nende kasutamine olla lokaalselt lubatav ja kontrollitav; f) ajalooliste mälestiste või ehitiste krohve kaitsealustes piirkondades, mis võivad olla riiklikult reguleeritud; g) eraldusplekkide projekteerimist ja paigaldamist aknalaudadel ja mujal. Euroopas kasutatavate materjalide ja ehitustavade rohkuse ja varieeruvuse ning erinevate ilmastikutingimuste töttu ei ole standardi teatud aspektke võimalik käsitleda sedavõrd üksikasjalikult, et need oleksid kõigis riikides täies ulatuses kasutatavad. Vastavad juhised, mis täiendavad, kuid ei muuda Euroopa põhimõttelisi soovitusi, on esitatud iga riigi enda koostatud dokumentides. Selle Euroopa standardi nendele aspektidele, mille kohta esitatavad põhimõttelised soovitused võiksid vajada täiendamist, on osundatud peatükile 1 viitava allmärkusega.

## EVS-EN 14844:2006+A2:2011

### Betoonvalmistooted. Truupide nelikantelemendid

### Precast concrete products - Box culverts CONSOLIDATED TEXT

See Euroopa standard käsitleb nii suuri (kandvaid) kui ka väikseid (mittekandvaid või väikese kandevõimega) täisnurkse ristlöikega truupide nelikantelemente, mis on vormitud monolitsetena ja projekteeritud jätkatavate elementidega, mille liidete kujundus võimaldab tihendusmaterjalide lisamist. Truupide nelikantelemente (ingl box culverts) võib kasutada pinnases eri õönsuste moodustamiseks materjalide transpordiks või mahutamiseks, nt heitvete viimariid või mahutid, kaablikanalid ja käigutunnelid. Selles Euroopa standardis käsitletakse väikestena (mittekandvate või väikese kandevõimega) neid truupide nelikantelemente, mille ristlöike sisemõõtmed (W ja H joonisel 1) on väiksem kui 1250 mm või sellega võrdne. Kõiki teisi elemente käsitletakse suurtena. Elementid valmistatakse tavaliselt tehastes, kasutades kas normaal- või kergbetooni ja vajavad tavaliselt sarrustamist. See standard ei hõlma autoklaavitud poorbetoonist tooteid ega monteeritavaid avatud struktuuriga kergbetoonist (koreabetoonist) truubi sarrustatud nelikantelemente. Iga element on konstruktivselt terviklik. Neid kasutatakse omavahel kombineeritult sobiva pikkuse (liited kaasa arvatud) ja mahutavusega konstruktsioonide moodustamiseks.

## EVS-EN 15269-20:2009

### Uste, luukide ja avatavate akende ning nende suluste tulepüsivuse ja/või suitsupidavuse katsetulemuste kasutusulatuse laiendamine. Osa 20: Hinged ja pöördtelgedega terasest, puidust ja metallprofiilidest uksekomplektide suitsupidavus

### Extended application of test results for fire resistance and/or smoke control for door, shutter and openable window assemblies, including their elements of building hardware - Part 20: Smoke control for hinged and pivoted steel, timber and metalframed glazed doorsets

See standardisarja (pr/Fpr)EN 15269 osa, mida tuleb lugeda koos standardikavandiga prEN 15269-1, katab järgmised ühe- ja kahelehelised hinged ja pöördtelgedega uksekonstruktsioonid: terasukse komplektid, puitukse komplektid (sh puitraamidega klaasitud uksed) ning metallprofiil uksekomplektid. See dokument määrab standardi EN 1634-3 kohaselt läbiviidud katse(te) tulemuste kasutusulatuse laiendamise meetodid. MÄRKUS On oodata, et ülaltoodud käsitusala laiendataks, katmaks ka teisi toote tüüpe, kui on rohkem kogutud asjakohast teavet ja kogemust. Asjakohas(te) lõpule viidud katse(te) alusel võib laiendatud kasutusulatus katta ümbriserva keskkonna temperatuuril teostatud katse (Sa) klassifikatsiooni ning katsetemperatuuril 200 °C teostatud katse (Sm) klassifikatsiooni ning kõiki või osasid alljärgnevaid variatsioone: — klaasitud elemendid, ventilatsiooni- ja/või tuulutusavad; — külgkilbid, framugid või ülapaneelid; — sulused; — viimistlusmaterjalid; — tuletökke, suitsutökke, helitökk ja soonetihedid; — alternatiivne/alternatiivsed tugitarind(id).

## EVS-EN 1610:2015

### Äravoolu- ja kanalisatsioonitorustike ehitamine ja katsetamine

### Construction and testing of drains and sewers

See Euroopa standard on rakendatav tavapäraselt maa sisse paigaldatud ja tavapäraselt raskusjöö, kuid ülekoormamisel kuni 0,5 kP rõhu all toimivate äravoolu- ja kanalisatsioonitorustike ehitamisel ja katsetamisel. Rõhu all toimivate torustike ehitamine on hõlmatud selle standardiga koos standardiga EN 805, vastavalt vajadusele (nt katsetamiseks). See Euroopa standard on rakendatav kaevikutesse või muldkehaga alla paigaldatavate ning maapealsete äravoolu- ja kanalisatsioonitorustike puhul. Kaevikuteta ehitamine hõlmatakse standardiga EN 12889. Lisaks tuleks arvesse võtta ka muid kohalikke või riiklike määruseid, nt tervise ja ohutuse, katendi taastamise ja lekkekindluse katsetamise nõuetekohased osas jm. MÄRKUS Lisainformatsioon on antud lisas D viidetega riiklikele dokumentidele.

## EVS-EN 60071-1:2006+A1:2010

### Isolatsiooni koordinatsioon. Osa 1: Määratlused, põhimõtted ja reeglid

### Insulation co-ordination Part 1: Definitions, principles and rules

Rahvusvahelise standardi IEC 60071 see osa kehtib kolmefaaasilistes vahelduvvoolu võrkudes, kus seadmete suurim lubatav kestevpinge on üle 1 kV. Selles määräatakse kindlaks selliste võrkude seadmete ja paigaldiste faasi ja maa vahelise, faasidevahelise ning pikisolatsiooni standardsete normtaluvuspingete valiku metodika. Selles on toodud ka standardsete väärustute loetelu, mille hulgast tuleb standardne normtaluvuspinge valida. See standard soovitab, et valitavad taluvuspinged peaksid olema seotud seadmete suurima lubatava kestevpingega. See seos on loodud ainult isolatsiooni koordinatsiooni eesmärgil. Inimeste elektriohutuse nõudeid see standard ei käsitle. Kuigi selle standardi põhimõtted rakenduvad ka ülekandeliinide isolatsioonile, võivad nende taluvuspingete väärustused erineda standardsetest taluvuspingetest. Seadmekomiteed on vastutavad konkreetsele seadmele sobiva taluvuspinge ja katsetamisprotseduuri sätestamise eest, arvestades selle

standardi soovitusi. MÄRKUS Kõik selles standardis toodud isolatsiooni koordinatsiooni reeglid täpsustatakse üksikasjalikult standardis IEC 60071-2 „Application Guide” (Rakendusjuhend), see puudutab eriti standardsete normtaluvuspingete ja seadmete suurima kestevpinge vahelist seost. Kui seadmete samale suurimale kestevpingele vastab rohkem kui üks standardsete normtaluvuspingete komplekt, siis on seal toodud juhised neist sobivama valikuks.

#### EVS-EN ISO 6878:2004

#### **Vee kvaliteet. Fosfaadi määramine. Ammonium molübdaadi spektrofotomeetriline meetod Water quality - Determination of phosphorus - Ammonium molybdate spectrometric method**

See standard kirjeldab meetodeid, millega saab määra: — ortofosfaati (vt peatükk 4); — ortofosfaati pärast solvendiga ekstraheerimist (vt peatükk 5); — hüdrolüüsuvat fosfaati ja ortofosfaati (vt peatükk 6); — üldfosforit pärast mineraliseerimist (vt peatükke 7 ja 8). Meetodid sobivad köikidele veeliiikidele, ka mereveele ja heitveele. Fosfori kontsentratsioone vahemikus 0,005 mg/l kuni 0,8 mg/l saab nendes proovides määräta proovi lahjendamata. Solvendiga ekstraheerimise meetod võimaldab määra madalamaid fosfori kontsentratsioone, määramispiriga ligikaudu 0,0005 mg/l.

#### EVS-HD 60364-7-712:2016

#### **Madalpingelised elektripaigaldised. Osa 7-712: Nõuded eripaigaldistele ja -paikadele.**

#### **Fotoelektrilised süsteemid**

#### **Low-voltage electrical installations - Part 7-712: Requirements for special installations or locations - Photovoltaic (PV) systems**

See osa kehtib fotoelektrilise generaatori elektripaigaldise kohta, mis on ette nähtud kogu paigaldise või selle osa varustamiseks elektrienergiaga ja elektrienergia andmiseks avalikku või kohalikku jaotusvõrku. Selles osas on fotoelektrilise generaatori elektriseadmeid, nagu ka iga muud elektriseadet, käsitletud vaid sel määral, mil see on vajalik nende valikuks ja rakendamiseks paigaldises. Fotoelektrilise generaatori elektripaigaldis algab fotoelektrilisest moodulist või moodulite komplektist, mis on ühendatud jadamisi oma kaabiltega, millel on ette näinud fotoelektrilise mooduli tootja, kuni kasutaja paigaldiseni või toitepunktini. Selle dokumendi nõuded kehitavad — fotoelektriliste generaatorite kohta, mis varustavad avalike elektrijaotussüsteemidega ühendamata paigaldisi, — fotoelektriliste generaatorite kohta, mis varustavad avalike elektrijaotussüsteemidega rööbiti ühendatud paigaldisi, — fotoelektriliste generaatorite kohta, mis varustavad alternatiivselt avalikest elektrijaotussüsteemidest toidetavaid paigaldisi, — üalmainitud võimalustele sobivate kombinatsioonide kohta. Nõuded fotoelektrilistele generaatoritele, mis on varustatud akupatareidega või muude energiasalvestusvahenditega, on arutusel.

#### EVS-HD 60364-7-722:2016

#### **Madalpingelised elektripaigaldised. Osa 7-722: Nõuded eripaigaldistele ja -paikadele.**

#### **Elektrisöidukite toide**

#### **Low-voltage electrical installations - Part 7-722: Requirements for special installations or locations - Supplies for electric vehicles**

Selles HD 60364 osas sisalduvad erinõuded kohaldatakse — elektrisöidukite laadimiseks ettenähtud toiteahelatele, — elektriahelatele, mis on ette nähtud elektrienergia tagasitoitmiseks elektrisöidukilt toitevõrku. MÄRKUS Nõuded elektrienergia tagasitoite kohta elektrisöidukilt toitevõrku on arutusel. Standard ei käsitle induktiivlaadimist.

#### EVS-IEC 60050-482:2013/A1:2016

#### **Rahvusvaheline elektrotehnika sõnastik. Osa 482: Primaar- ja sekundaarelementid ja -patareid International Electrotechnical Vocabulary - Part 482: Primary and secondary cells and batteries (IEC 60050-482:2004/Amd 1:2016)**

Muudatus standardile IEC 60050-482:2004

#### EVS-IEC 60050-482:2013+A1:2016

#### **Rahvusvaheline elektrotehnika sõnastik. Osa 482: Primaar- ja sekundaarelementid ja -patareid International Electrotechnical Vocabulary - Part 482: Primary and secondary cells and batteries (IEC 60050-482:2004 + IEC 60050-482:2004/Amd 1:2016)**

Standardisarja IEC 60050 selles osas on esitatud üldterminid, mida kasutatakse primaar- ja sekundaarelementide ja -patareide kohta ja mis peegeldavad nende tehnilisi lahendusi, kujundust, konstruktsiooni, toimivust ja kasutusalta. Selle jaotise terminid on kooskõlas rahvusvahelise elektrotehnika sõnastiku muudes eriosades väljatöötatud terminitega.

## UUED HARMONEERITUD STANDARDID

Toote nõuetele vastavuse seaduse kohaselt avaldab Eesti Standardikeskus oma veebilehel ja ametlikus väljaandes teavet harmoneeritud standardeid ülevõtvtate Eesti standardite kohta.

Harmoneeritud standardiks nimetatakse EÜ direktiivide kontekstis Euroopa Komisjoni mandaadi alusel Euroopa standardimisorganisatsioonide koostatud ja vastu võetud standardit.

Harmoneeritud standardite kasutamise korral eeldatakse enamiku vastavate direktiivide mõistes, et standardi kohaselt valmistatud toode täidab direktiivi olulisi nõudeid ning on seega reeglina kõige lihtsam viis töendada direktiivide oluliste nõute täitmist. Harmoneeritud standardi täpne tähdus ja õiguslik staatus tuleneb siiski iga direktiivi tekstist eraldi ning võib direktiivist olenevalt erineda.

Lisainfo:

<http://www.newapproach.org/>

<http://ec.europa.eu/growth/single-market/european-standards/harmonised-standards>

Eesti Standardikeskus avaldab ametlikus väljaandes harmoneeritud standardeid ülevõtvtate Eesti standardite kohta järgmist infot:

- harmoneeritud standardi staatuse saanud Eesti standardid
- harmoneeritud standardi staatuses olevate Eesti standardite kohta avaldatud märkused ja hoiatused, mida tuleb standardite järgimisel arvestada
- harmoneeritud standardi staatuse kaotanud Eesti standardid

Info esitatakse vastavate direktiivide kaupa.

### Direktiiv 2006/42/EÜ Masinad (EL Teataja 2016/C 332/01)

Harmoneeritud standardit ülevõtva Eesti standardi tähis ja pealkiri	Kuupäev, millest alates Eesti standardi aluseks olevat Euroopa standardit võib rakendada harmoneeritud standardina	Viide asendatavale Euroopa standardile	Kuupäev, mil asendatava standardi järgimisest tulenev vastavus-eeldus kaotab kehtivuse Märkus 1
EVS-EN 13561:2015/AC:2016 Välirulood ja markiisid. Toimivus- ja ohutusnõuded	09.09.2016		
EVS-EN 16743:2016 Toidutöötlemismasinad. Automaatsed tööstuslikud viilutamismasinad. Ohutus- ja hügieeninõuded	09.09.2016		
EVS-EN 16774:2016 Masinate ohutus. Terase konverterite ja nendega seotud abiseadmete ohutusnõuded	09.09.2016		
EVS-EN 60335-2-102:2016 Majapidamis- ja muud taolised elektriseadmed. Ohutus. Osa 2-102: Erinõuded elektrilisi ühendusi omavatele gaasi, öli ja tahkekütuse pöletamise seadmetele	09.09.2016		
EVS-EN 60335-2-37:2003/A12:2016 Majapidamis- ja muude taolistele elektriseadmete ohutus. Osa 2-37: Erinõuded kaubanduslikele elektrifitüüridele	09.09.2016	Märkus 3	25.01.2019
EVS-EN 60335-2-8:2015/A1:2016 Majapidamis- ja muud taolised elektriseadmed. Ohutus. Osa 2-8: Erinõuded pardlitele, juukselöökusmasinatele ja muudtele taolistele seadmetele	09.09.2016	Märkus 3	28.12.2018
EVS-EN 60335-2-89:2010 Majapidamis- ja muud taolised elektriseadmed. Ohutus. Osa 2-89: Erinõuded kaubanduses kasutatavatele sisseehitatud või eraldiseisva külmutuskondensaatori või kompressoriga külmutusseadmetele	09.09.2016		
EVS-EN 60335-2-89:2010/A1:2016 Majapidamis- ja muud taolised elektriseadmed. Ohutus. Osa 2-89: Erinõuded kaubanduses kasutatavatele sisseehitatud või eraldiseisva külmutuskondensaatori või kompressoriga külmutusseadmetele	09.09.2016	Märkus 3	12.02.2019
EVS-EN 62841-2-11:2016 Käeshoitavad elektromootoriga tööriistad, transporditavad tööriistad ja muru- ning aiatöomasinad. Ohutus. Osa 2-11: Erinõuded käeshoitavatele suundamuutvatele saagidele	09.09.2016	EN 60745-2-11:2010 Märkus 2.1	23.12.2019

EVS-EN ISO 19353:2016 Masinate ohutus. Tulekahjude vältimine ja tulekaitse	09.09.2016	EN 13478:2001+A1:2008 Märkus 2.1	31.07.2016
EVS-EN ISO 20361:2015 Vedelikupumbad ja pumbaseadmed. Mürakatse kood. Täpsusklassid 2 ja 3	09.09.2016	EN ISO 20361:2009 Märkus 2.1	31.12.2015
EVS-EN ISO 3691-1:2015/AC:2016 Industrial trucks - Safety requirements and verification - Part 1: Self-propelled industrial trucks, other than driverless trucks, variable-reach trucks and burden- carrier trucks (ISO 3691-1:2011, including Cor 1:2013)	09.09.2016		
EVS-EN ISO 3691-6:2015/AC:2016 Industrial trucks - Safety requirements and verification - Part 6: Burden and personnel carriers (ISO 3691- 6:2013)	09.09.2016		
EVS-EN ISO 4254-14:2016 Pöllumajandusmasinad. Ohutus. Osa 14: Heinapressid	09.09.2016		
EVS-EN ISO 8528-13:2016 Sisepõlemis-kolbmootoriga vahelduvvoolugeneraatorid. Osa 13: Ohutus	09.09.2016	EN 12601:2010 Märkus 2.1	30.06.2017

Märkus 1: Tavaliselt on kuupäevaks, mil asendatava standardi järgmisest tulenev vastavuseeldus kehtivuse kaotab, Euroopa standardiorganisatsiooni kehtestatud tühistamiskuupäev, kuid könealuste standardite kasutajate tähelepanu juhitakse asjaolule, et teatavatel erandjuhtudel võib olla ka teisiti.

Märkus 2.1: Uue (või muudetud) standardi reguleerimisala on samasugune nagu asendataval standardil. Osutatud kuupäevast alates ei loo asendatava standardi järgimine enam eeldust, et toode või teenus vastab liidu ajaomaste õigusaktide olulistele või muudele nõuetele.

Märkus 3: Muudatuste puhul on viitestandard EN CCCCC:AAAAA, vajaduse korral selle varasemad muudatused ja osutatud uus muudatus. Asendatav standard koosneb seega standardist EN CCCCC:AAAAA ja vajaduse korral selle varasematest muudatustest, kuid ei hõlma osutatud uut muudatust. Osutatud kuupäeval ei anna asendatava standardi järgimine enam eeldust, et toode või teenus vastab liidu ajaomaste õigusaktide olulistele või muudele nõuetele.
