EVS-EN 1264-1:2021

Water based surface embedded heating and cooling systems - Part 1: Definitions and symbols

The EN 1264 series gives guidelines for surface embedded heating and cooling systems installed in buildings, residential and non-residential (e.g. office, public, commercial and industrial buildings) and focuses on systems installed for the purpose of thermal comfort. The EN 1264 series gives guidelines for water based heating and cooling systems embedded into the enclosure surfaces of the room to be heated or to be cooled. It also specifies the use of other heating media instead of water, as appropriate. The EN 1264 series specifies standardized product characteristics by calculation and testing the thermal output of heating for technical specifications and certification. For the design, construction and operation of these systems, see EN 1264-3 and EN 1264-4 for the types A, B, C, D, H, I and J. For the types E, F and G, see the EN ISO 11855 series. The systems specified in the EN 1264 series are adjoined to the structural base of the enclosure surfaces of the building, mounted directly or with fixing supports. The EN 1264 series does not specify ceiling systems mounted in a suspended ceiling with a designed open air gap between the system and the building structure which allows the thermally induced circulation of the air. The thermal output of these systems can be determined according to the EN 14037 series and EN 14240. EN 1264-1 specifies system types and characteristics of water based surface embedded radiant heating and cooling systems.

CWA 5643-1:2021

Tourism and related services - Requirements and guidelines to reduce the spread of Covid-19 in the tourism industry (ISO/PAS 5643:2021)

This CWA will consist of two parts: - Part 1: will be an endorsement of ISO/PAS 5643 Measures to reduce the spread of Covid-19 in the tourism industry - Part 2: will include other elements not covered by the ISO/PAS in order to complement it with European needs. The task of this Workshop is to identify gaps or additional requirements, elements, or sectors to be added to those outlined in CWA 5643 – Part 1. In alignment with ISO DPAS 5643, the CWA will apply to the whole tourism value chain, including the following subsectors: - Accommodation, including campsites, hostels, hotels and rural accommodation - Catering services and restaurants - Medical spas - Golf courses - Ski areas - Yacht harbours and nautical activities - Adventure and ecotourism - Beaches - Natural protected areas - Unique public spaces - Museums and heritage sites - Night leisure - Tourist bus companies, rent a car, cableway and tourism water transport - Tourist guides - Tourist information offices - Tourist visits - Travel agencies - MICE tourism - Theme and leisure parks (including water parks, animal parks (zoos and aquariums) and family entertainment centres.

Tourism and related services - Requirements and guidelines to reduce the spread of Covid-19 in the tourism industry - European visual identity

This document provides a visual identity to be displayed by European tourist organizations in accordance with CWA 5643-1 and establishes requirements and guidance on the use of the visual identity. This document also includes informative annexes relating to implementation (checklist), references to national standards and protocols and information addressed to the user of the service offered by the tourist organizations.

07 LOODUS- JA RAKENDUSTEADUSED

EVS-EN ISO 23036-1:2021

Microbiology of the food chain - Methods for the detection of Anisakidae L3 larvae in fish and fishery products - Part 1: UV-press method (ISO 23036-1:2021)

This part of ISO 23036 specifies a method that is applicable for the detection of Anisakidae L3 larvae commonly found in marine and anadromous fishes. The method can be applied to fresh fish and/or frozen fish, lightly processed fish products, such as marinated, salted or cold smoked. This method allows quantifying parasitic infections by estimating the number of parasites in the fish musculature. This method doesn't allow determining species or genotype of detected parasites, which identification is made by morphological and/or molecular methods.

EVS-EN ISO 23036-2:2021

Microbiology of the food chain - Methods for the detection of Anisakidae L3 larvae in fish and fishery products - Part 2: Artificial digestion method (ISO 23036-2:2021)

This part of ISO 23036 specifies a method that is applicable for the detection of Anisakidae L3 larvae commonly found in marine and anadromous fishes. The method can be applied to fresh fish and/or frozen fish, lightly processed fish products, such as marinated, salted or smoked, and it's also suitable for visceral organs as confirmatory method for visual inspection scheme. The artificial digestion method allows quantifying parasitic infections by estimating the number of parasites in the fish musculature and, when applied to fresh fish or lightly processed fish products (never frozen before processing), determining the viability of Anisakidae L3, which may be present. This method doesn't allow determining species or genotype of detected parasites, which identification is made by morphological and/or molecular methods.

EVS-EN ISO 13408-6:2021

Tervishoiutoodete aseptiline töötlemine. Osa 6: Isolaatorsüsteemid

Aseptic processing of health care products - Part 6: Isolator systems (ISO 13408-6:2021)

This document specifies the requirements for and provides guidance on the specification, selection, qualification, bio-decontamination, validation, operation and control of isolator systems related to aseptic processing of health care products and processing of cell-based health care products. This document does not specify requirements for restricted access barrier systems (RABS). This document does not supersede or replace national regulatory requirements such as Good Manufacturing Practices (GMPs) and/or compendia requirements that pertain in particular to national or regional jurisdictions. This document does not specify requirements for isolators used for sterility testing; however, some of the principles and information in this document could be applicable to this application. This document does not define biosafety containment requirements.

Small-bore connectors for liquids and gases in healthcare applications - Part 7: Connectors for intravascular or hypodermic applications (ISO 80369-7:2021)

This document specifies dimensions and requirements for the design and functional performance of small-bore connectors intended to be used for connections in intravascular applications or hypodermic connections in hypodermic applications of medical devices and accessories. EXAMPLES Hypodermic syringes and needles or intravascular (IV) cannulae with male and female Luer slip connectors and Luer lock connectors. NOTE 1 See Annex A. NOTE 2 The Luer connector was originally designed for use at pressures up to 300 kPa. This document does not specify requirements for themedical devices or accessories that use these connectors. Such requirements are given in particular documents for specific medical devices or accessories. This document does not specify requirements for the following small-bore connectors, which are specified in other documents: - haemodialyser, haemodiafilter and haemofilter blood compartment ports (ISO 8637 [5] and applicable portion of ISO 8638 referencing blood compartment ports); - haemodialysis, haemodiafiltration and haemofiltration equipment connectors (ISO 8637 [5]); - infusion system closure piercing connectors (ISO 8536-4 [4]). NOTE 3 Manufacturers are encouraged to incorporate thesmall-bore connectors specified in this document into medical devices or accessories, even if currently not required by the relevant particular medical device documents. It is expected that when the relevant particular medical device documents are revised, requirements for small-bore connectors, as specified in ISO 80369, will be included. NOTE 4 ISO 80369-1:2018, Clause 7, specifies alternative methods of conformance with ISO 80369-1:2018, for small-bore connectors intended for use with intravascular applications or hypodermic application medical devices or accessories, which do not conform with this document.

13 KESKKONNA- JA TERVISEKAITSE. OHUTUS

EVS 846:2021

Hoone kanalisatsioon

Draining system inside buildings

See standard kehtib hoone kanalisatsioonile, mille kaudu reoveed suubuvad linna, asula ühiskanalisatsiooni. Hoone kanalisatsiooni all mõeldakse hoonesisest veeneeludega ühendatud kanalisatsioonitorustikku koos võimalike lisaseadmetega (sulgeseadmed, pumplad, puhastusavad) kuni hoone välisseinani ja võimalike eelpuhastitega hoones. Hoone- ja väliskanalisatsiooni standardite piiritus on tähistatud (Joonis 1). Standardis ei käsitleta tulekustutuspäigaldiste rakendamisel või katsetamisel tekinud vee ärvoolu. Tuleohutuspäigaldiste vee ärvoolu nõudeid (nt. tuletörjeliftid) kirjeldatakse standardis EVS 812-8. Käesolev standard ei käsitele drenaaži projekteerimist. Standardi nõudeid tuleb täita nii uue hoone kanalisatsiooni projekteerimisel, paigaldamisel, katsetamisel kui ka olemasolevate kanalisatsioonisüsteemide ümberehitamisel.

Keel: et

Asendab dokumenti: EVS 846:2013

EVS 848:2021

Väliskanalisatsioonivõrk

Sewer systems outside buildings

See Eesti standard rakendub hoonevälistele kanalisatsioonivõrkudele, s.o hooneviimast/väljaväigust (hoone välisseinast) (EVS 846) või sademevee restkaevust kohani, kus kanalisatsioonivesi jõuab reoveepuhastisse või heitvee suublasse. Hoonealused torustikud kuuluvad kanalisatsioonivõrgu hulka siis, kui nad ei ole osa hoone kanalisatsioonisüsteemist. Standardis määratatakse kindlaks funktsionaalsed nõuded kanalisatsioonivõrgule seoses planeerimise, projekteerimise, ehitamise, käitamise, hoolduse ja ekspluatatsiooniga ning tegevused nõuete täitmiseks.

EVS-EN 15344:2021

Plastics - Recycled plastics - Characterization of Polyethylene (PE) recyclates

This document defines a method of specifying delivery conditions for polyethylene (PE) recyclates. It gives the most important characteristics and associated test methods for assessing PE recyclates intended for use in the production of semi-finished/finished products. It is intended to support parties involved in the use of polyethylene (PE) recyclates obtained by mechanical recycling to agree on specifications for specific and generic applications. This document is applicable without prejudice to any existing legislation. This document does not cover the characterization of plastics wastes (see EN 15347).

Extended application of test results on durability of self-closing for doorsets and openable windows - Part 4: Durability of self-closing of fire resistance and/or smoke control hinged and pivoted metal framed glazed doorsets and openable windows

This document is applicable to single and double leaf, hinged and pivoted metal framed, glazed doorsets or openable windows as covered by EN 15269 5 or EN 15269 20. This document prescribes the methodology for extending the application of test results obtained from durability of self-closing test(s) conducted in accordance with EN 1191. Subject to the completion of the appropriate self-closing test(s), the extended application can cover all or some of the following non-exhaustive list: - doorsets and openable windows; - door or window leaves; - wall or ceiling fixed elements (frame or suspension system); - glazing and non-glazed panels in doorset and openable window, side, transom and/or overpanels; - items of building hardware; - decorative finishes; - intumescent, smoke, draught or acoustic seals; - alternative supporting construction(s).

Fire-fighting hoses - Rubber and plastics suction hoses and hose assemblies (ISO 14557:2021)

This document establishes the requirements and test methods for rubber and plastics suction hoses for fire-fighting purposes. These hoses can also be used manually to supply unpressurized water to the pump or for water discharge. NOTE All pressures are expressed in megapascals and in bar (1 MPa = 10 bar). Additional requirements are specified for hose assemblies, that is, hoses with couplings already fitted, where this is carried out by the hose manufacturer (see Clause 8). Type A (rubber) hoses are intended for use at a minimum temperature of -20 °C and Type B (thermoplastics) hoses are intended for use at a minimum temperature of -10 °C.

EVS-EN ISO 9038:2021

Determination of sustained combustibility of liquids (ISO 9038:2021)

This document specifies a procedure, at temperatures up to 100 °C, to determine whether or not a liquid product, that would be classified as "flammable" by virtue of its flash point, sustains combustion at the temperature or temperatures specified in the appropriate regulations. NOTE 1 Many national and international regulations classify liquids as presenting a flammable hazard on the basis of their flash point, as determined by a recognized method. Some of these regulations allow a derogation if the substance cannot "sustain combustion" at some specified temperature or temperatures. NOTE 2 In connection with the United Nations recommendations on the Transport of Dangerous Goods as well as with the Globally Harmonized System of Classification and Labelling of Chemicals, and also with derived national/EC regulations, temperatures of 60,5 °C and 75,0 °C are specified for this test.[1][2] The procedure is applicable to paints (including water-borne paints), varnishes, paint binders, solvents, petroleum or related products and adhesives, which have a flash point. It is not applicable to painted surfaces in respect of assessing their potential fire hazards. This test method is applicable, in addition to test methods for flash point, for assessing the fire hazard of a product. NOTE 3 Particular care needs to be taken in translating results from this test method to large scale (real life) situations, as liquids in large quantities can behave in different ways to small samples.

EVS-EN 50554:2021

Basic standard for the in-situ assessment of exposure to radio frequency electromagnetic fields in the vicinity of a broadcast site

This document specifies the method for assessing overall exposure from all fixed radio frequency sources at a broadcast site. This assessment can be applied at any time but is carried out when the exposure situation changes in or around the aforementioned site. This document can play an essential role in the coordination of different stakeholders, with respect to ensuring EMF exposure compliance in the vicinity of a broadcast site especially for equipment installed within the site.

Akustika. Masinate ja seadmete müra. Töökoha ja muude määratud asukohtade helirõhutaseme määramine koos keskkonnaoludest tulenevate ligikaudsete korrektsoonide kohaldamisega

Acoustics - Noise emitted by machinery and equipment - Determination of emission sound pressure levels at a work station and at other specified positions applying approximate environmental corrections (ISO 11202:2010 + ISO 11202:2010/Amd 1:2020)

1.1 Üldist See rahvusvaheline standard määratleb meetodi masinate või seadmete tekitatava helirõhutaseme määramiseks töökohas ja muudes kindlaksmääratud kohtades, in situ. Töökoht, kus asub operaator, võib asuda välistingimustes, ruumis, kus

mõõdetav müräallikas töötab, kabiinis, mis on kinnitatud mõõdetava müräallika külge, või mõõdetavast müräallikast eemal asuvas ruumis. Üks või mitu kindlaksmääratud mõõtmiskohta võivad asuda töökoha läheduses või uuritava või mõne muu seadme läheduses. Selliseid mõõtmiskohti nimetatakse ka kõrvalseisjate asukohaks. Tekkivad helirõhutusemed määratatakse A-kaalutud tasemetena. Lisaks saab vajaduse korral selle rahvusvahelise standardi kohaselt kindlaks määräta tasemed sagedusribades ja heli C-kaalutud maksimaalse helirõhutuseme. MÄRKUS 1 Standardisarjade ISO 11200 [15] kuni ISO 11205 [19] sisu on kokku võetud standardis ISO 11200 [15]. Esitatakse meetodid kohaliku keskkonnaparanduse määramiseks (kindlaksmääratud piirväärtuse kohaselt), mida rakendatakse mõõdetud helirõhutusemetele, et kõrvaldada peegeldavate pindade mõju, v.a tasapind, millel müräallikas asub. See parandus põhineb mõõteruumi ekvivalentse heli neeldumisalal ja heli leviku karakteristikuteil (müräallika asukoht või leviku suund töökohas). Selles rahvusvahelises standardis täpsustatud meetodiga saadakse täpsusastme 2 (tehniline tase) või täpsusastme 3 (vaatlustase) tulemused. Parandusi rakendatakse taustmüra ja eespool kirjeldatud akustilise keskkonna iseloomustamiseks. Antakse juhiseid katsetatava müräallika paigaldamiseks ja kasutamiseks ning mikrofoni asukohtade valimiseks töökoha ja muude kindlaksmääratud mõõtekohtade jaoks. Mõõtmiste üks eesmärk on võrrelda eri seadmegruppide toimivust määratletud keskkonnatingimustes ning standarditud paigaldus- ja töötigimustes. MÄRKUS 2 Saadud andmeid saab kasutada ka tekkiva mürä helirõhutusemetale deklareerimiseks ja kontrollimiseks standardi ISO 4871 [9] kohaselt. 1.2 Mürä tüübide ja müräallikad Selles rahvusvahelises standardis määratletud meetod sobib igat tüüpि mürä jaoks (püsiv, muutuv, kõliku, isoleeritud impulssmüra jne), mis on määratletud standardis ISO 12001. Selles rahvusvahelises standardis määratletud meetod on rakendatav kõigile müräallikatele tüübist ja suurusest olenevata. MÄRKUS Selles rahvusvahelises standardis kasutatakse sõnu „seade“ ja „mõõdetav müräallikas“ masina või seadme tähistamiseks. 1.3 Mõõtekeskkond Mõõtekeskkonna tüüp möjutab tekkiva heli „helirõhutuseme määramise täpsust. Seda rahvusvahelist standardit saab rakendada kõikides ruumides, kus saab kohaldada standardi nõudeid. Ruumi suhtes kehitavad nõuded on vähem ranged kui standardi ISO 11201 [16] nõuded, eriti nõuded keskkonna akustiliste omaduste kohta.

1.4 Töökoht ja muud määratud mõõtmiskohad See rahvusvaheline standard on kohaldatav töökohtades ja muudes määratud kohtades, kus tuleb määräta helirõhutase. Mõõtmisteks on sobivad järgmised kohad: a) töökoht, mis asub müräallika läheduses; see on koht, mida kasutatakse paljude tööstusseadmete ja kodumasinate mõõtmisel; b) kabiinis asuv töökoht, mis on mõõdetava müräallika lahitamatu osa; see on koht, mida kasutatakse paljude eri liikurmasinate mõõtmisel; c) osaliselt või täielikult suletud töökoht (või ekraaniga kaitstud koht), mille tootja tarnib müräallika lahitamatu osana; d) töökoht, mis on müräallikaga osaliselt või täielikult suletud – selline olukord võib ilmneda mõne suure tööstusseadme korral; e) kõrvalseisja töökohad, kus on isikud, kes ei tööta selle müräallikaga, kuid kes võivad vahetavahel või pidevalt asuda müräallika vahetus läheduses; f) muud määratud kohad, mis ei pruugi olla kellegi töökohad. Töökoht võib asuda ka operaatori määratud liikumisteel (vt jaotis 10.4).

Unfired pressure vessels - Part 6: Requirements for the design and fabrication of pressure vessels and pressure parts constructed from spheroidal graphite cast iron

This document specifies requirements for the design, materials, manufacturing and testing of pressure vessels and pressure vessel parts intended for use with a maximum allowable pressure, PS, equal or less than: - 100 bar when containing gases or liquids in group 1 or 2 - 1000 bar when containing liquids in group 2 only. and shell wall thicknesses not exceeding 60 mm, which are constructed of ferritic or austenitic spheroidal graphite cast iron. The thickness limitation of the shell does not apply to thickness of flanges, reinforcements, bosses etc. NOTE 1 Austenitic spheroidal graphite cast iron grades are principally used for high and low temperature applications and for their corrosion resistance properties. NOTE 2 The allowable grades of spheroidal graphite cast iron are listed in Tables 5.1-1 and 5.1-2. Service conditions are given in Clause 4. This document, EN 13445-6, does not include lamellar graphite cast iron grades for ferritic and austenitic grades with, with an elongation after fracture equal or less than 15 % which are explicitly excluded. Requirements for the use of cast irons with an elongation after fracture equal or less than 15 % are given in EN 15776.

Specifications for dedicated liquefied petroleum gas appliances - LPG vapour pressure appliances incorporating a horizontal cartridge in the chassis

This document specifies the construction characteristics, performances and marking related to safety and the rational use of energy of portable, flat gas appliances directly supplied at the LPG vapour pressure, incorporating a gas cartridge complying with EN 417:2012, inserted horizontally in the chassis. NOTE 1 These appliances are referred to in the body of the text as "appliances". This document covers appliances for outdoor or in well ventilated areas uses only. This document does not cover appliances supplied by an external gas source. For example, the following types of appliances are covered: a) cooking appliances (stoves, barbecues); b) heating appliances. This document specifies the requirements applicable to these appliances or their functional sections whether or not the latter are independent or incorporated into an assembly. Appliances covered by this document are not connected to a flue for the discharge of products of combustion and are not connected to the mains electricity supply. This document covers neither appliances supplied with LPG in the liquid phase nor appliance with fixed integral container which could be refilled by the user. This document does not cover appliances of direct pressure propane category. Requirements for rational use of energy have been considered for stove burners. NOTE 2 However, such requirements have not been considered for the other types of appliances because: - for barbecues, this type of cooking varies according to the type of food and region where the appliance is used; - for heating appliances, all the heat produced is discharged into the environment.

Rubber and plastics hoses and hose assemblies - Determination of resistance to vacuum (ISO 7233:2021)

This document specifies three methods for determining the resistance to vacuum of hoses and hose assemblies manufactured from plastic or rubber. Applicable dimensions of hoses for each method are as follows: — method A for hoses of nominal size up to and including 80; — method B for hoses of nominal size greater than 80; — method C for hoses of all dimensions. If not otherwise specified in the product standard, method C can be used as an alternative to methods A and B. Methods A and B can also be used to check the adhesion of the lining to the reinforcement (delamination) in a length of hard-wall hose or hose assembly.

Copper and copper alloys - Test methods for assessing protective tin coatings on drawn round copper wire for electrical purposes

This document specifies methods for assessing the tin coating on drawn round copper wire for the manufacture of electrical conductors, e.g. according to EN 13602. This document includes test methods for the determination of the following characteristics: a) thickness of the unalloyed tin coating; b) continuity of the tin coating; c) adherence of the tin coating. **WARNING** — This document can involve the use of hazardous materials, operations, and equipment. This document does not purport to address all of the safety problems associated with their use. It is the responsibility of the user of this document to establish appropriate safety and health practices and determine the applicability of regulatory limitations prior to use. Moreover this document does not cover the aspects related to the protection against the X-ray. To obtain information applicable to this aspect, it is convenient to refer to national and international standards, and also to the local regulations if they exist.

Imperfections in thermoplastics welded joints - Quality levels

This document specifies quality levels for imperfections in thermoplastics welded joints that have cooled to ambient temperature and is applicable to material thickness above 2,0 mm. Three quality levels are specified in order to permit application for a wide range of welded fabrication. They are designated by symbols B, C and D, where B is the most stringent. The quality levels refer to production quality and not to the fitness-for-purpose (see 3.2) of the manufactured product. The quality level necessary are expected to be defined by the application standard or by the fabricator in conjunction with the user and/or other parties concerned. The level is expected to be prescribed before the start of production, preferably at the enquiry or order stage. This document applies to the following thermoplastic materials in Table 1: and to the following welding processes: - heated tool welding; - electrofusion socket welding; - hot gas welding using filler rod only; - extrusion welding; - solvent welding of pipes.

Electric motor-operated hand-held tools, transportable tools and lawn and garden machinery - Safety - Part 3-7: Particular requirements for transportable wall saws

IEC 62841-3-7:2020 This document applies to transportable wall saws guided by a track guiding system intended for dry cutting or to be connected to a liquid system for cutting concrete, stone or similar material by means of a diamond wheel. The rated speed of the diamond wheel does not exceed a peripheral speed of 100 m/s at rated capacity. The rated voltage is not more than 250 V for single-phase a.c. or d.c. tools, and 480 V for three-phase a.c. tools. This document does not apply to transportable wall saws that are intended to be left unattended while performing an operation. This document does not apply to transportable wall saws that employ hydraulic systems. This document does not apply to hand-held cut-off machines.

EVS-EN 437:2021

Test gases - Test pressures - Appliance categories

This document specifies the test gases, test pressures and categories of appliances relative to the use of gaseous fuels of the first, second and third families. It serves as a reference document in the specific standards for appliances. The document makes recommendations for the use of the gases and pressures to be applied for the tests of appliances burning gaseous fuels. NOTE Procedures for tests are given in the corresponding appliance standards. The test gases and the test pressures specified in this standard are in principle intended to be used with all types of appliances. However, the use of some test gases and test pressures may not be appropriate in the following cases: - appliances with nominal heat input greater than 300 kW; - appliances constructed on site; - appliances in which the final design is influenced by the user; - appliances constructed for use with high supply pressures (notably direct use of the saturated vapour pressure). In these cases, the specific appliance standards may specify other test conditions in order to establish compliance with their requirements.

Lamps and light sources for road vehicles - Dimensional, electrical and luminous requirements

This document is applicable to electric light sources (see Note 1) for use in automotive applications, for example in road illumination devices and/or light signalling devices for road vehicles. It is especially applicable to light sources listed in UN Resolution R.E.5 and light sources subject to other legislations. This document specifies the technical requirements for interchangeability for example dimensional, electrical and photometrical characteristics, and includes test methods. For the light sources listed in this document, the data sheets are contained either in this document or are included by reference to UN Resolution R.E.5. Performance requirements are specified in IEC 60810, for example life, torsion strength, resistance to vibration and shock. The requirements for miniature light sources for supplementary purposes, not subject to legislation, are specified in IEC 60983. NOTE 1 The terms "lamp" and "light source" are both used in this document to mean the same product, so the two terms are interchangeable throughout this document. NOTE 2 In various vocabularies and standards, different terms are used for "incandescent lamp" (IEC 60050-845:1987, 845-07-04), "discharge lamp" (IEC 60050-845:1987, 845-07-17) and "LED lamp". In this document "filament lamp", "discharge lamp" and "LED light source" are used, however, where only "lamp" or "light source" is written, all light sources, independent of the technology used, are meant, unless the context clearly shows that it applies to one kind of technology only. In the UN Regulations, the word "light source" is used for the products specified in this document. NOTE 3 Wherever the term "device" is used, it is meant to designate equipment which is used as a luminaire. It can for instance take the form and purpose of a headlight or signal light.

Madalpingelised aparaadikoosted. Osa 1: Üldreeglid

Low-voltage switchgear and controlgear assemblies - Part 1: General rules (IEC 61439-1:2020)

See standardisarja IEC 61439 osa esitab madalpingeliste aparaadikoostete üldmääratlused ja kehtestab nende talitlustingimused, ehitusnõuded, tehnilised tunnusandmed ja kontrollinõuded. MÄRKUS Kogu selles dokumendis kasutatakse terminit kooste(d) (vt termin 3.1.1) üksnes madalpingelis(te) aparaadikooste(te) tähdenduses. Kooste vastavuse töendamise eesmärgil rakendatakse standardisarja IEC 61439 ajakohase osa nõudeid alates osast 2 koos selle dokumendi viidatud nõuetega. Koostete kohta, mis ei ole hõlmatud osadega alates osast 3, rakendatakse osa 2. See dokument rakendub koostete kohta, kui see on nõutav üksnes ajakohase koostestandardiga, järgmiselt: — koostet, mille tunnus-vahelduvpinge ei ole üle 1000 V ega tunnus-alalispinge üle 1500 V; — koostet, mis on ette nähtud siseneva elektritoite või -toidete nimisagedusele mitte üle 1000 Hz; — koostet, mis on ette nähtud sise- või välisrakendusteks; — kohtkindlad või teisaldatavad, ümbrisega või ümbriseta koostet; — koostet, mis on ette nähtud kasutamiseks seoses elektrienergia genereerimise, edastamise, jaotamise ja muundamisega ning elektrienergia tarbimisseadmete juhtimisega. See dokument ei rakendu üksikseadmete ja iseseisvate komponentide kohta, nagu mootorkäivitid, sulavkaitsmetega ühitatud lülitid, elektron-jõumuundursüsteemid ja -seadmed (power electronic converter systems and equipment, PECS), lülitimooduselised jõutoiteallikad (switch mode power supplies, SMPS), katkestusvabad toiteallikad (uninterruptable power supplies, UPS), põhiahjamisüsteemid (basic drive modules, BDM), komplektsed ajamisüsteemid (complete drive modules, CDM), reguleeritava kiirusega elektriajamisüsteemid (adjustable speed power drives systems, PDS) ja muud elektroonikaseadmed, mis vastavad oma ajakohastele tootestandarditele. See dokument kirjeldab seadiste ja iseseisvate komponentide sisseehitamist koostesse või koostet kujundavasse tühja ümbrisesse. Mõnedes rakendustes, mida iseloomustab näiteks plahvatusohtliku keskkonna olemasolu või funktsionaalse turvalisuse nõue, võib lisaks standardisarjas IEC 61439 sätestatule vaja olla täita muude standardite või seadusaktide nõudeid.

Madalpingelised aparaadikoosted. Osa 2: Jõuaparaadikoosted

Low-voltage switchgear and controlgear assemblies - Part 2: Power switchgear and controlgear assemblies (IEC 61439-2:2020)

See standardisarja IEC 61439 osa määratleb erinõuded jõu-lülitusaparaate ja juhimisaparaate sisaldavatele koostetele (selle dokumendi ulatuses lühendatult jõuaparaadikoostetele, vt termin 3.1.101) järgmiselt: • koostetele, mille tunnuspinge ei ole vahelduvvoolu korral üle 1000 V ega alalisvoolu korral üle 1500 V; • koostetele, mis on ette nähtud sisendtoite või -toidete nimisagedusele mitte üle 1000 Hz; MÄRKUS 1 Sagedust üle 1 kHz arvestatakse körgsagedusena (vt ka standardi IEC 60664-1:2007 jaotis 5.3.3.2.5), mis vajab isolatsiooni koordinatsiooni lisapiirangute arvesse võtmist. • koostetele, mis on ette nähtud sise- või välisrakendusteks; • kohtkindlatele või teisaldatavatele, ümbrisega või ümbriseta koostetele; • koostetele, mis on ette nähtud kasutamiseks seoses elektrienergia genereerimise, edastamise, jaotamise ja muundamisega ning elektritarvitite juhtimisega ja kaasneva andmetöötusega; • koostetele, mis on projekteeritud kasutamiseks eritalitusoludes, nt laevadel või rööbassöidukitel, kui on tagatud, et ka muud ajakohased erinõuded on täidetud. MÄRKUS 2 Laevade koostetele esitatavad lisänõuded on esitatud standardis IEC 60092-302-2. See dokument rakendub ka koostetele, mis on möeldud kasutamiseks fotoelektrilistes paigaldistest ja mida nimetatakse fotoelektrilisteks koosteteks (photovoltaic assemblies, PVA). Fotoelektriliste koostete eriomadused, eritalitusolud ja nõuded sisalduvad lisades DD, EE ja FF. See dokument näeb ette lisänõuded jõuaparaadikoostetele, mis on ette nähtud kasutamiseks masinate elektriseadmete osana ja mis võivad rakenduda lisaks standardis IEC 60204-1 esitatud nõuetele. See dokument kehtib kõikidele koostetele, mida projekteeritakse, valmistatakse ja kontrollitakse üksikult või mis on täielikult standarditud ning mida toodetakse hulg. Koosteid võivad toota ja/või kokku panna peale esmatootja (vt standardi IEC 61439-1:2020 termin 3.10.1) ka teised juriidilised isikud. See dokument ei kehti üksikseadmete (näiteks kaitselülitite ja sulavkaitse-lülti-kombinatsioonide) ega iseseisvate komponentide (nagu näiteks mootorkäivitite, jõu-elektronmuundursüsteemide ja -seadmete (power electronic converter systems and equipment, PECS),

lülitusmooduses toiteallikate (switch mode power supplies, SMPS), katkestusvabade toiteallikate (uninterruptable power supplies, UPS), põhi-ajamimoodulite (basic drive modules, BDM), komplektsete ajamimoodulite (complete drive modules, CDM), reguleeritava kiirusega jõuajamisüsteemide (power drives systems, PDS), autonoomsete (galvaanielementide patareidel ja kondensaatoritel põhinevate) energiasalvestussüsteemide ja muude elektroonikaseadmete kohta, mis vastavad nende endi asjakohastele tootestandarditele. See dokument kirjeldab nende integreerimist jõuaparaadikoostesse või tühja ümbrisesse, mida kasutatakse jõuaparaadikooste osana. Mõnedel rakendustel, nagu näiteks plahvatusohhtikes keskkondades või funktsionaalse ohutuse tagamisel, võib tekkida vajadus täita lisaks standardisarjas IEC 61439 sätestatule muude standardite või õigusaktide nõudeid. See dokument ei kehti erikoostete kohta, mida käsitlevad standardisarja IEC 61439 muud osad. Koostete kohta, mida standardisarja muudes osades ei käsitleta, kehitib see osa. Kui kohalik seadusandlus ei esita üksikasjalikke lisanoodeid, eeldatakse, et selle dokumendi käsitlusallasse kuuluvad seadmed, mis vastavad sellele dokumendi täidavad põhilisi ohutusnõudeid. Siaa kuuluvad täielikult kontrollitud erivariandid, näiteks kasutajapoolse kaitse valik ohtlike pingestatud osade juhusliku puudutamise eest kaitseviiside IPXXB või IP3XD puhul. Kui kasutaja ja tootja vahel on kokku lepitud erinõuded, mis ei ole täielikult sätestatud selles dokumendis, näiteks kui (i) kooste osa on väljaspool selle dokumendi käsitlusala, (ii) paigalduskohas on tegemist erakordse vibratsiooniga, (iii) talitlustes võib tekkida erakordseid pingeköikumisi või (iv) võivad tekkida heli- või ultraheliallikate kahjulikud toimed, võib vaja olla nõuda riskihinnangut ja/või rakendada rangemaid või lisa-kontrolliviise, et näidata põhiliste ohutusnõute täidetust.

Fixed capacitors for use in electronic equipment - Part 2: Sectional specification - Fixed metallized polyethylene-terephthalate film dielectric DC capacitors

This part of IEC 60384 applies to fixed capacitors for direct current, with metallized electrodes and polyethylene-terephthalate dielectric for use in electronic equipment. These capacitors have a possibility of "self-healing properties" depending on conditions of use. They are primarily intended for applications where the AC component is small with respect to the rated voltage. Two performance grades of capacitors are covered: grade 1 for long-life application and grade 2 for general application. Capacitors for electromagnetic interference suppression and surface mount fixed metallized polyethylene-terephthalate film dielectric DC capacitors are not included, but are covered by IEC 60384-14 and IEC 60384-19, respectively. The object of this document is to prescribe preferred ratings and characteristics and to select from IEC 60384-1 the appropriate quality assessment procedures, tests and measuring methods, and to give general performance requirements for this type of capacitor. Test severities and requirements prescribed in detail specifications referring to this sectional specification are of equal or higher performance level, because lower performance levels are not permitted.

EVS-EN 300 338-1 V1.6.1:2021

Technical characteristics and methods of measurement for equipment for generation, transmission and reception of Digital Selective Calling (DSC) in the maritime MF, MF/HF and/or VHF mobile service; Part 1: Common requirements

The present document states the minimum requirements for equipment to be used for generation, transmission and reception of Digital Selective Calling (DSC) for use on board ships. DSC is intended to be used in the Medium Frequency (MF), High Frequency (HF) and Very High Frequency (VHF) bands of the Maritime Mobile Service (MMS), for distress, urgency and safety communication and general communications. The present document is part 1 of a multi-part deliverable that covers the requirements to be fulfilled by:

- DSC equipment integrated with a transmitter and/or a receiver;
- DSC equipment not integrated with a transmitter and/or a receiver.

These requirements include the relevant provisions of the ITU Radio Regulations and Recommendations ITU-R M.493-15, M.541-10, M.689-3 and M.1082-1, the International Convention for the Safety Of Life At Sea (SOLAS), and the relevant resolutions of the International Maritime Organization (IMO). Equipment for generation, transmission and reception of DSC designed according to the following equipment classes:

- Class A: includes all the facilities defined in annex 1 of Recommendation ITU-R M.493-15 and complies with the IMO Global Maritime Distress and Safety System (GMDSS) carriage requirements for MF/HF installations and/or VHF installations.
- Class D: provides minimum facilities for VHF DSC distress, urgency and safety as well as routine calling and reception as recommended by IMO MSC/Circ.803 for non-SOLAS vessels participating in the GMDSS.
- Class E: provides minimum facilities for MF and/or HF DSC distress, urgency and safety as well as routine calling and reception as recommended by IMO MSC/Circ.803 for non-SOLAS vessels participating in the GMDSS.
- Class H: provides minimum facilities for handheld VHF DSC distress, urgency and safety as well as routine calling and reception as recommended by IMO MSC/Circ.803 for non-SOLAS vessels participating in the GMDSS.
- Class M: provides minimum facilities for VHF Man Overboard devices as defined in Recommendation ITU-R M.493-15.

NOTE 1: Class A equipment may support the optional semi-automatic/automatic service in accordance with Recommendations ITU-R M.689-3, M.1082-1 and M.493-15, tables A1-4.10.1 and A1-4.10.2 and are encouraged to do so.

NOTE 2: Class D and Class E equipment may also support the optional semi-automatic/automatic service.

NOTE 3: Class D, Class E, Class H should provide a defined list of functions as a closed list for these classes of equipment is the preferable approach to ensure safe and simple operation. Optional functions should be avoided, with the intention to provide the same functionality of all equipment of one class.

Satellitside maajaamad ja süsteemid (SES); Saatesagedusel 11 GHz - 14 GHz mittegeostatsionaarbiidil satelliidisüsteemidega (NEST) suhtlevad stationaarsed ja liikuvad maajaamad; Raadiospektrile juurdepääsu harmoneeritud standard

Satellite Earth Stations and Systems (SES); Fixed and in-motion Earth Stations communicating with non-geostationary satellite systems (NEST) in the 11 GHz to 14 GHz frequency bands; Harmonised Standard for access to radio spectrum

The present document specifies technical characteristics and methods of measurements for fixed and in-motion Earth Stations communicating with non-geostationary satellite systems (NEST) in the 11 GHz to 14 GHz FSS frequency bands, which have the following characteristics:

- The NEST is designed for both in-motion and stationary operation.
- The NEST operates in-motion on various platforms such as trains, maritime vessels, aircraft and other vehicles and, therefore, may be subject to occasional disturbances and interruptions in the satellite link.
- The NEST is operating as part of a satellite system used for the provision of broadband communications.
- The NEST is comprised of all the equipment, electrical and mechanical, from the antenna itself to the interface with other communications equipment on a mobile platform.
- The NEST comprises one or more emitters and the system overview as given in Figure 1 should be interpreted accordingly.
- The transmit and receive frequencies are shown in Table 1.
- Table 1: Frequency bands Transmit (Earth-to-space) 14,0 GHz to 14,50 GHz Receive (space-to-Earth) 10,70 GHz to 12,75 GHz
- The NEST transmits within the frequency range from 14,0 GHz to 14,50 GHz.
- The NEST receives within the range from 10,70 GHz to 12,75 GHz.
- The NEST transmits at elevation angles of 35° or greater, relative to the horizontal plane.
- The NEST uses linear or circular polarization.
- The NEST communicates with non-geostationary satellites.
- The NEST is designed for unattended operation.
- The NEST is controlled and monitored by a Network Control Facility (NCF).
- The NCF is outside the scope of the present document.
- The present document applies to the NEST with its ancillary equipment and its various telecommunication ports, and when operated within the boundary limits of the operational environmental profile as declared by the manufacturer and when installed as required by the manufacturer's declaration or in the user documentation.

NOTE: The relationship between the present document and essential requirements of article 3.2 of Directive 2014/53/EU is given in annex A.

Electronic Signatures and Infrastructures (ESI); General Policy Requirements for Trust Service Providers

The present document specifies general policy requirements relating to Trust Service Providers (TSPs) that are independent of the type of TSP. It defines policy requirements on the operation and management practices of TSPs. Other specifications refine and extend these requirements as applicable to particular forms of TSP. The present document does not specify how the requirements identified can be assessed by an independent party, including requirements for information to be made available to such independent assessors, or requirements on such assessors. NOTE: See ETSI EN 319 403 for details about requirements for conformity assessment bodies assessing Trust Service Providers.

EVS-EN 319 411-1 V1.3.1:2021

Electronic Signatures and Infrastructures (ESI); Policy and security requirements for Trust Service Providers issuing certificates; Part 1: General requirements

The present document specifies generally applicable policy and security requirements for Trust Service Providers (TSPs) issuing public key certificates, including trusted web site certificates. The policy and security requirements are defined in terms of requirements for the issuance, maintenance and life-cycle management of certificates. These policy and security requirements support several reference certificate policies, defined in clauses 4 and 5. A framework for the definition of policy requirements for TSPs issuing certificates in a specific context where particular requirements apply is defined in clause 7. The present document covers requirements for CA hierarchies, however this is limited to supporting the policies as specified in the present document. It does not include requirements for root CAs and intermediate CAs for other purposes. The present document is applicable to:

- the general requirements of certification in support of cryptographic mechanisms, including digital signatures for electronic signatures and seals;
- the general requirements of the use of cryptography for authentication and encryption.

The present document does not specify how the requirements identified can be assessed by an independent party, including requirements for information to be made available to such independent assessors, or requirements on such assessors. NOTE: See ETSI EN 319 403 for guidance on assessment of TSP's processes and services. The present document references ETSI EN 319 401 for general policy requirements common to all classes of TSP's services. The present document includes provisions consistent with the requirements from the CA/Browser Forum in EVCG and BRG.

EVS-EN 319 412-1 V1.4.4:2021

Electronic Signatures and Infrastructures (ESI); Certificate Profiles; Part 1: Overview and common data structures

The present document provides an overview of the Recommendation ITU-T X.509 | ISO/IEC 9594-8 based certificate profiles and the statements for EU Qualified Certificates specified in other parts of ETSI EN 319 412. It specifies common data structures that are referenced from other parts of ETSI EN 319 412. The profiles specified in this multi-part deliverable aim to support both the Regulation (EU) No 910/2014 and use of certificates in a wider international context. Within the European context, it aims to support both EU Qualified Certificates and other forms of certificate.

Industrial, scientific and medical equipment - Radiofrequency disturbance characteristics - Limits and methods of measurement (CISPR 11:2015, modified + CISPR 11:2015/A1:2016 + CISPR 11:2015/A2:2019)

This International Standard applies to industrial, scientific and medical electrical equipment operating in the frequency range 0 Hz to 400 GHz and to domestic and similar appliances designed to generate and/or use locally radio-frequency energy. This standard covers emission requirements related to radio-frequency (RF) disturbances in the frequency range of 9 kHz to 400 GHz. Measurements need only be performed in frequency ranges where limits are specified in Clause 6. For ISM RF applications in the meaning of the definition found in the ITU Radio Regulations (see Definition 3.13), this standard covers emission requirements related to radio-frequency disturbances in the frequency range of 9 kHz to 18 GHz. NOTE Emission requirements for induction cooking appliances are specified in CISPR 14-1 [1]. Requirements for ISM RF lighting equipment and UV irradiators operating at frequencies within the ISM frequency bands defined by the ITU Radio Regulations are contained in this standard. Equipment covered by other CISPR product and product family emission standards are excluded from the scope of this standard.

EVS-EN IEC 60794-3-70:2021

Optical fibre cables - Part 3-70: Outdoor cables - Family specification for outdoor optical fibre cables for rapid/multiple deployment

IEC 60794-3-70:2021 covers outdoor optical fibre cables intended for rugged terrestrial rapid/multiple deployment. These cables, with enhanced mechanical, environmental and ingress performance can be used wherever a rapid or multiple deployment is relevant (e.g. mobile broadcast units, emergency rescue services, tactical ground-forces, outdoor motion-robotics, mining machinery, temporary repair cables for damaged links, etc.). This second edition cancels and replaces the first edition published in 2016. It constitutes a technical revision. This edition includes the following significant technical changes with respect to the previous edition: - incorporation of the new classification system for optical fibre categories, sub-categories in IEC 60793-2-10; - incorporation of the new classification system for optical fibre categories, sub-categories and models in IEC 60793-2-50; - updating of cabled fibre performance categories in alignment with ISO/IEC 11801-1; - updating of bibliographical references.

Optical fibre cables - Part 4-30: Aerial optical cables along electrical power lines - Family specification for optical phase conductor (OPPC) optical cables

This part of IEC 60794, which is a family specification, specifies the optical fibre, cable elements, cable construction requirements, main requirements for installation and operating conditions, cable design characteristics and test for OPPC (optical phase conductor), used for carrying current as well as communication and data transmission. The corresponding environmental declaration can be built according to IEC TR 62839-1. The OPPC is a substitute for a conventional phase bare conductor containing optical fibres. Usually, the fibres are embedded loosely in protective buffer tubes. To fulfil mechanical and electrical requirements, an armouring of one or more layers with aluminium, aluminium alloy, and aluminium clad steel, galvanized steel or a mixture of them is helically stranded.

EVS-EN IEC 61000-3-2:2019+A1:2021

Elektromagnetiline ühilduvus. Osa 3-2: Piirväärtused. Vooluharmoonikute emissiooni lubatavad piirväärtused (seadmetel sisendvooluga kuni 16 A faasi kohta)

Electromagnetic compatibility (EMC) - Part 3-2: Limits - Limits for harmonic current emissions (equipment input current ≤16 A per phase) (IEC 61000-3-2:2018 + IEC 61000-3-2:2018/A1:2020)

This part of IEC 61000 deals with the limitation of harmonic currents injected into the public supply system. It specifies limits of harmonic components of the input current which can be produced by equipment tested under specified conditions. This part of IEC 61000 is applicable to electrical and electronic equipment having a rated input current up to and including 16 A per phase, and intended to be connected to public low-voltage distribution systems. Arc welding equipment, which is not professional equipment, with a rated input current up to and including 16 A per phase, is included in the scope of this document. All other arc welding equipment is excluded from the scope of this document; however, the harmonics emission can be evaluated using IEC 61000-3-12 and relevant installation restrictions. The tests according to this document are type tests. For systems with nominal voltages less than but not equal to 220 V (line-to-neutral), the limits have not yet been considered. NOTE The words apparatus, appliance, device and equipment are used throughout this document. They have the same meaning for the purposes of this document.

Fibre optic interconnecting devices and passive components - Performance standard - Part 111-08: Sealed closures for Category G - Ground

IEC 61752-111-08:2021 contains the minimum tests, test severities and measurement requirements which a sealed fibre optic closure need to meet in order to be categorised as meeting the IEC standard for category G - Ground, as defined in Table A.14 of IEC 61753-1:2018. Free breathing closures are not covered in this document. This first edition cancels and replaces IEC 61753-111-8 published in 2009. This edition constitutes a technical revision. This edition includes the following significant technical changes with respect to IEC 61753-111-8: a) terms and definitions updated according to IEC 61753-1:2018 and IEC 61756-1:2019; b) test severities updated according to IEC 61753-1:2018; c) sealing tests are done with 20 kPa overpressure; d) pass-fail criterion of pressure loss during test added to mechanical sealing tests; e) vibration sealing test changed to 10 Hz, 3 mm amplitude and 1 000 000 cycles; f) reduced loads added in cable retention test for small diameter cables and tubes; g) reduced loads for cable axial compression test for small diameter cables; h) the duration of the cycles in torsion and bending test is added; i) free fall test removed (is covered by the optical shock test); j) crush resistance test of 1 000 N for 10 min is added; k) assembly and disassembly test: duration reduced to 5 cycles; l) resistance to solvents and contaminating fluids: added immersion in diesel with duration of 1 h and 24 h drying time and added immersion in petroleum jelly for 5 days; m) resistance to stress cracking solvents added for 5 days; n) duration of the change of temperature reduced to 12 cycles; o) water immersion test at 1 m for 7 days added.

BIM Properties for lighting - Luminaires and sensing devices

This document identifies and clarifies lighting properties for digital building design and maintenance. This document provides all the needed properties to design and to describe luminaires and sensing devices. These properties are intended to be used as mapping properties for property providers and requesters. The mapping of the identifiers enables the exchange of luminaire and sensing device data within different databases. The unambiguous mapping and description of properties improve the data quality, reduce misinterpretations and the processing time in digital environments. Therefore, the properties listed in this document establish the essential description of luminaires and sensing devices in BIM systems and databases. The listed properties in this document are used to structure the product data sheet which is complemented with real product information.

43 MAANTEESÖIDUKITE EHITUS

EVS-EN IEC 60809:2021

Lamps and light sources for road vehicles - Dimensional, electrical and luminous requirements

This document is applicable to electric light sources (see Note 1) for use in automotive applications, for example in road illumination devices and/or light signalling devices for road vehicles. It is especially applicable to light sources listed in UN Resolution R.E.5 and light sources subject to other legislations. This document specifies the technical requirements for interchangeability for example dimensional, electrical and photometrical characteristics, and includes test methods. For the light sources listed in this document, the data sheets are contained either in this document or are included by reference to UN Resolution R.E.5. Performance requirements are specified in IEC 60810, for example life, torsion strength, resistance to vibration and shock. The requirements for miniature light sources for supplementary purposes, not subject to legislation, are specified in IEC 60983. NOTE 1 The terms "lamp" and "light source" are both used in this document to mean the same product, so the two terms are interchangeable throughout this document. NOTE 2 In various vocabularies and standards, different terms are used for "incandescent lamp" (IEC 60050-845:1987, 845-07-04), "discharge lamp" (IEC 60050-845:1987, 845-07-17) and "LED lamp". In this document "filament lamp", "discharge lamp" and "LED light source" are used, however, where only "lamp" or "light source" is written, all light sources, independent of the technology used, are meant, unless the context clearly shows that it

applies to one kind of technology only. In the UN Regulations, the word "light source" is used for the products specified in this document. NOTE 3 Wherever the term "device" is used, it is meant to designate equipment which is used as a luminaire. It can for instance take the form and purpose of a headlight or signal light.

Railway applications - Braking - Requirements for the brake system of trains hauled by locomotives

This European Standard specifies basic requirements for the braking of trains hauled by locomotives: - For trains hauled by locomotives and intended for use in general operation each vehicle is fitted with the traditional brake system with a brake pipe compatible with the UIC brake system. NOTE This ensures technical compatibility of the brake function between vehicles of various origins in a train (see 5.4). - For trains hauled by locomotives and intended for use in fixed or predefined formation, the requirements on the vehicle and the train are necessary. In the case of a UIC brake system, this standard applies; if not, the EN 16185 series or the EN 15734 series applies. If concerned, the UIC brake architecture described in this standard (see 5.4) can be used for brakes for multiple unit train and high speed trains and urban rail described in the EN 13452 series, the EN 16185 series and the EN 15734 series. This European Standard also takes into account electrical and electronic control functions and additional brake systems like dynamic brakes and adhesion independent brakes. The brake system requirements, which are specific for on-track machines are set out in EN 14033-1. This European Standard does not apply to Urban Rail rolling stock braking system, which is specified by EN 13452-1.

Safety of household and similar appliances - Part 2-107: Particular requirements for robotic battery powered electrical lawnmowers (IEC 60335-2-107:2012, modified)

This clause of Part 1 is replaced by the following: This European Standard specifies safety requirements and their verification for the design and construction of robotic battery powered electrical rotary lawnmowers and their peripherals with the rated voltage of the battery being not more than 75 V d.c. charged by mains electrical and/or alternative energies, e.g. solar power. This European Standard does not apply to non-robotic machines such as lawn trimmers, lawn edge trimmers, lawn edgers, ride-on lawnmowers or pedestrian controlled lawnmowers. This European Standard is not applicable to EMC and environmental hazards (except noise). This European Standard does not apply to internal combustion engine(s), hybrid and fuel cell powered machines and associated charging systems. This European Standard deals with all the significant hazards presented by battery powered robotic lawnmowers and their peripherals when they are used as intended and under conditions of misuse which are reasonably foreseeable. This European Standard is not applicable to machines, which are manufactured before the date of publication of this document by CENELEC. NOTE This European Standard does not apply to battery chargers (EN 60335-2-29:2004). This standard covers all significant hazards, hazardous situations or hazardous events relevant for tools covered by this standard. NOTE 101 Essential requirements not mentioned in Table ZZ.1 are deemed to be not applicable, because the corresponding hazards are either not relevant for machines covered by this standard or do not require specific action by the designer.

EVS-EN 1473:2021

Paigaldised ja seadmed veeldatud maagaasi jaoks. Kaldalolevate paigaldiste konstruktsioon Installation and equipment for liquefied natural gas - Design of onshore installations

This document gives guidelines for the design, construction and operation of all onshore liquefied natural gas (LNG) installations for the liquefaction, storage, vaporization, transfer and handling of LNG and natural gas (NG). This document is applicable for plants with an LNG storage capacity above 200 t. The designated boundary limits are LNG inlet/outlet by the ship's manifold including vapour return connection, the truck loading/unloading connection including vapour return, the rail car loading/unloading connection including vapour return and the natural gas in and outlet boundary by piping systems. Terminals or plant types have one or more boundary limits as described in this scope (see Figure 1). A short description of each of these installations is given in Annex G. Feed gas for LNG liquefaction installations (plant) can be from gas field, associated gas from oil field, piped gas from transportation grid or from renewables. Floating solutions (for example FPSO, FSRU, SRV), whether off-shore or near-shore, are not covered by this document even if some concepts, principles or recommendations could be applied. However, in case of berthed FSRU with LNG transfer across the jetty, the following recommendations apply for the jetty and topside facilities. In case of solutions using floating storage unit (FSU) and land-based re-gasification solution, the on-shore part is covered by these standard recommendations. Plants with a storage inventory from 5 t up to 200 t are covered by [5].

Determination of sustained combustibility of liquids (ISO 9038:2021)

This document specifies a procedure, at temperatures up to 100 °C, to determine whether or not a liquid product, that would be classified as "flammable" by virtue of its flash point, sustains combustion at the temperature or temperatures specified in the appropriate regulations. NOTE 1 Many national and international regulations classify liquids as presenting a flammable hazard on the basis of their flash point, as determined by a recognized method. Some of these regulations allow a derogation if the substance cannot "sustain combustion" at some specified temperature or temperatures. NOTE 2 In connection with the United Nations recommendations on the Transport of Dangerous Goods as well as with the Globally Harmonized System of Classification and Labelling of Chemicals, and also with derived national/EC regulations, temperatures of 60,5 °C and 75,0 °C are specified for this test.[1][2] The procedure is applicable to paints (including water-borne paints), varnishes, paint binders, solvents, petroleum or related products and adhesives, which have a flash point. It is not applicable to painted surfaces in respect of assessing their potential fire hazards. This test method is applicable, in addition to test methods for flash point, for assessing the fire hazard of a product. NOTE 3 Particular care needs to be taken in translating results from this test method to large scale (real life) situations, as liquids in large quantities can behave in different ways to small samples.

Safety of machinery - Safety requirements for the design and construction of paper making and finishing machines - Part 1: Common requirements

This document specifies safety requirements. This document is applicable to paper making and paper finishing machines. It contains definitions and requirements which apply to all paper making and paper finishing machines listed in Annex A and is intended to be used in connection with the specific part applicable for the respective machine listed in Annex A. Specific parts can contain additional requirements or deviations from EN 1034-1 in which case the specific stipulations take precedence over the specification made in EN 1034-1. The standard deals with the hazards listed in Annex B. This document deals with all significant hazards, hazardous situations or hazardous events relevant to paper making and paper finishing machines, when they are used as intended and under conditions of misuse which are reasonably foreseeable by the manufacturer. This document does not apply to machines used in paper converting. See EN 1010-1 to EN 1010-5. This document applies to machines produced after the date of publication of this standard.

Paper, board, pulps and cellulosic nanomaterials - Determination of dry matter content by oven-drying method - Part 1: Materials in solid form (ISO 638-1:2021)

This document specifies an oven-drying method for the determination of the dry matter content in paper, board, pulp and cellulosic nanomaterials in solid form, which all can be produced from virgin and /or recycled materials. It is also applicable to the determination of the dry matter content of paper and board for recycling. The procedure is applicable to paper, board, and pulp and cellulosic nanomaterials which do not contain any appreciable quantities of materials other than water that are volatile at the temperature of $105^{\circ}\text{C} \pm 2^{\circ}\text{C}$. It is used, for example, in the case of pulp, paper, and board and cellulosic nanomaterial

samples taken for chemical and physical tests in the laboratory, when a concurrent determination of dry matter content is required. This method is not applicable to the determination of the dry matter content of slush pulp or to the determination of the saleable mass of pulp lots. NOTE 1: ISO 638-2 specifies an oven-drying method for the determination of the dry matter content of suspensions of cellulosic nanomaterials, ISO 287 specifies the determination of the moisture content of a lot of paper and board; ISO 4119 specifies the determination of stock concentration of pulps; ISO 801 (all parts) specifies the determination of the saleable mass in lots. NOTE 2: This document determines the total dry matter content of the sample, including any dissolved solids. If only the cellulosic material content free of dissolved solids is desired, dissolved solids are removed prior to measuring the dry matter content e.g. by washing or dialysis, taking care to retain all cellulosic material; in cases where the sample is filterable without loss of cellulosic solids, ISO 4119 can be used to determine the stock consistency (content of cellulosic material in solid form).

91 EHITUSMATERJALID JA EHITUS

EVS 846:2021

Hoone kanalisatsioon

Draining system inside buildings

See standard kehtib hoone kanalisatsioonile, mille kaudu reoveed suubuvad linna, asula ühiskanalisatsiooni. Hoone kanalisatsiooni all mõeldakse hoonesisest veeneeludega ühendatud kanalisatsioonitorustikku koos võimalike lisaseadmetega (sulgeseadmed, pumplad, puhurstusavad) kuni hoone välisseinani ja võimalike eelpuhastitega hoones. Hoone- ja väliskanalisatsiooni standardite piiritus on tähistatud (Joonis 1). Standardis ei käsitleta tulekustutuspäigaldiste rakendamisel või katsetamisel tekinud vee ärvoolu. Tuleohutuspäigaldiste vee ärvoolu nõudeid (nt. tulefõrjeliftid) kirjeldatakse standardis EVS 812-8. Käesolev standard ei käsitle drenaaži projekteerimist. Standardi nõudeid tuleb täita nii uue hoone kanalisatsiooni projekteerimisel, paigaldamisel, katsetamisel kui ka olemasolevate kanalisatsioonisüsteemide ümberehitamisel.

Water based surface embedded heating and cooling systems - Part 1: Definitions and symbols

The EN 1264 series gives guidelines for surface embedded heating and cooling systems installed in buildings, residential and non-residential (e.g. office, public, commercial and industrial buildings) and focuses on systems installed for the purpose of thermal comfort. The EN 1264 series gives guidelines for water based heating and cooling systems embedded into the enclosure surfaces of the room to be heated or to be cooled. It also specifies the use of other heating media instead of water, as appropriate. The EN 1264 series specifies standardized product characteristics by calculation and testing the thermal output of heating for technical specifications and certification. For the design, construction and operation of these systems, see EN 1264-3 and EN 1264-4 for the types A, B, C, D, H, I and J. For the types E, F and G, see the EN ISO 11855 series. The systems specified in the EN 1264 series are adjoined to the structural base of the enclosure surfaces of the building, mounted directly or with fixing supports. The EN 1264 series does not specify ceiling systems mounted in a suspended ceiling with a designed open air gap between the system and the building structure which allows the thermally induced circulation of the air. The thermal output of these systems can be determined according to the EN 14037 series and EN 14240. EN 1264-1 specifies system types and characteristics of water based surface embedded radiant heating and cooling systems.

EVS-EN 1264-2:2021

Water based surface embedded heating and cooling systems - Part 2: Floor heating: Methods for the determination of the thermal output using calculations and experimental tests

The EN 1264 series gives guidelines for surface embedded heating and cooling systems installed in buildings, residential and non-residential (e.g. office, public, commercial and industrial buildings) and focuses on systems installed for the purpose of thermal comfort. The EN 1264 series gives guidelines for water based heating and cooling systems embedded into the enclosure surfaces of the room to be heated or to be cooled. It also specifies the use of other heating media instead of water, as appropriate. The EN 1264 series specifies standardized product characteristics by calculation and testing the thermal output of heating for technical specifications and certification. For the design, construction and operation of these systems, see EN 1264-3 and EN 1264-4 for the types A, B, C, D, H, I and J. For the types E, F and G, see the EN ISO 11855 series. The systems specified in the EN 1264 series are adjoined to the structural base of the enclosure surfaces of the building, mounted directly or with fixing supports. The EN 1264 series does not specify ceiling systems mounted in a suspended ceiling with a designed open air gap between the system and the building structure which allows the thermally induced circulation of the air. The thermal output of these systems can be determined according to the EN 14037 series and EN 14240. EN 1264-2 specifies hot water floor heating systems. The application of EN 1264-5 requires the prior use of EN 1264-2. EN 1264-5 specifies the conversion of

the thermal output of floor heating systems determined in EN 1264-2 into the thermal output of heating surfaces embedded in walls and ceilings as well as into the thermal output of cooling surfaces embedded in floors, walls and ceilings. EN 1264-2 specifies the boundary conditions and the test methods for the determination of the thermal output of hot water floor heating systems as a function of the temperature difference between the heating medium and the room temperature. The thermal output is tested by a calculation method and by a measurement method. The calculation method is applicable to systems corresponding to the definitions in EN 1264-1 (type A, B, C, D, H, I and J). The measurement method gives guidance for systems not corresponding to these definitions. The calculation method and the measurement method are consistent with each other and provide correlating and adequate test results. The test results, expressed depending on further parameters, are the standard specific thermal output and the associated standard temperature difference between the heating medium and the room temperature as well as fields of characteristic curves showing the relationship between the specific thermal output and the temperature difference between the heating medium and the room.

EVS-EN 1264-5:2021

Water based surface embedded heating and cooling systems - Part 5: Determination of the thermal output for wall and ceiling heating and for floor, wall and ceiling cooling

The EN 1264 series gives guidelines for surface embedded heating and cooling systems installed in buildings, residential and non-residential (e.g. office, public, commercial and industrial buildings) and focuses on systems installed for the purpose of thermal comfort. The EN 1264 series gives guidelines for water based heating and cooling systems embedded into the enclosure surfaces of the room to be heated or to be cooled. It also specifies the use of other heating media instead of water, as appropriate. The EN 1264 series specifies standardized product characteristics by calculation and testing the thermal output of heating for technical specifications and certification. For the design, construction and operation of these systems, see EN 1264-3 and EN 1264-4 for the types A, B, C, D, H, I and J. For the types E, F and G, see the EN ISO 11855 series. The systems specified in the EN 1264 series are adjoined to the structural base of the enclosure surfaces of the building, mounted directly or with fixing supports. The EN 1264 series does not specify ceiling systems mounted in a suspended ceiling with a designed open air gap between the system and the building structure which allows the thermally induced circulation of the air. The thermal output of these systems can be determined according to the EN 14037 series and EN 14240. EN 1264-5 specifies the recalculation of values determined in EN 1264-2 for the system in question. It enables the conversion of the calculation and measurement results of EN 1264-2 into results for other surface orientations in the room, i.e. for ceiling and wall heating, as well as for the application as cooling surfaces, i.e. for floor, ceiling and wall cooling. The test results of EN 1264-2 are the basis of all calculation, whether or not the system in question is used for heating or cooling application.

Building valves - Expansion groups - Tests and requirements

This document specifies, dimensions, materials and performance requirements (including methods of test) for expansion groups, of nominal sizes from DN 15 to DN 25, having working pressures from 0,1 MPa (1 bar) to 1,0 MPa (10 bar). Expansion groups are fitted to the cold potable water supply only for expansion purposes, e.g. of storage water heaters, having a maximum distribution temperature of 95 °C. Expansion groups limit pressure in the water heater to which they are fitted, that is produced by thermal expansion of the water, prevent the backflow of water into the supply pipe and prevent the discharged water to get into contact with the water in the water heater. Expansion groups do not control temperature and alone do not constitute the protection required for storage water heaters. NOTE The use of the device specified in this document does not override the need to use controls (e.g. thermostats and thermal cut-outs) which act directly on the power sources of water heaters (for more information see Annex A).

Curtain walling - Determination of the strength of shear connections - Test method and requirements

This document specifies test methods for the determination of bearing capacity (ultimate limit state and serviceability limit state), of connections between curtain walling framing members for which it cannot be calculated in accordance with current codes or conventional calculations based upon the strength of the materials. Mechanical performances of the curtain walling connections are already assessed in accordance with the provisions described in EN 13830. Additional information with respect to mechanical performance of the connections and direct applications can be determined with this document.

Extended application of test results on durability of self-closing for doorsets and openable windows - Part 4: Durability of self-closing of fire resistance and/or smoke control hinged and pivoted metal framed glazed doorsets and openable windows

This document is applicable to single and double leaf, hinged and pivoted metal framed, glazed doorsets or openable windows as covered by EN 15269 5 or EN 15269 20. This document prescribes the methodology for extending the application of test results obtained from durability of self-closing test(s) conducted in accordance with EN 1191. Subject to the completion of the appropriate self-closing test(s), the extended application can cover all or some of the following non-exhaustive list: - doorsets and openable windows; - door or window leaves; - wall or ceiling fixed elements (frame or suspension system); - glazing and non-glazed panels in doorset and openable window, side, transom and/or overpanels; - items of building hardware; - decorative finishes; - intumescent, smoke, draught or acoustic seals; - alternative supporting construction(s).

Cement - Part 5: Portland-composite cement CEM II/C-M and Composite cement CEM VI

This document deals with Portland-composite cement CEM II/C-M, not covered by EN 197-1, and a different type of Composite cement CEM VI, also not covered by EN 197-1, whose intended use is the preparation of concrete, mortar, grout etc. This document does not cover: - common cement covered by EN 197-1; - very low heat special cement covered by EN 14216; - supersulfated cement covered by EN 15743; - calcium aluminate cement covered by EN 14647; - masonry cement covered by EN 413-1.

Test gases - Test pressures - Appliance categories

This document specifies the test gases, test pressures and categories of appliances relative to the use of gaseous fuels of the first, second and third families. It serves as a reference document in the specific standards for appliances. The document makes recommendations for the use of the gases and pressures to be applied for the tests of appliances burning gaseous fuels. NOTE Procedures for tests are given in the corresponding appliance standards. The test gases and the test pressures specified in this standard are in principle intended to be used with all types of appliances. However, the use of some test gases and test pressures may not be appropriate in the following cases: - appliances with nominal heat input greater than 300 kW; - appliances constructed on site; - appliances in which the final design is influenced by the user; - appliances constructed for use with high supply pressures (notably direct use of the saturated vapour pressure). In these cases, the specific appliance standards may specify other test conditions in order to establish compliance with their requirements.

Acoustics - Laboratory measurement of sound insulation of building elements - Part 1: Application rules for specific products (ISO 10140-1:2021)

This document specifies test requirements for the laboratory measurement of the sound insulation of building elements and products, including detailed requirements for the preparation and mounting of the test elements, and for the operating and test conditions. It also specifies the applicable quantities, and provides additional test information for reporting. The general procedures for airborne and impact sound insulation measurements are given in ISO 10140-2 and ISO 10140-3, respectively.

Equipment for commercial kitchens - Components for ventilation in commercial kitchens - Part 3: Kitchen ventilation ceilings; design and safety requirements

This European Standard specifies requirements for the design, construction and operation of kitchen ventilation ceilings, including technical safety, ergonomic and hygienic features. This European Standard is applicable to ventilation systems in commercial kitchens, associated areas and other installations processing foodstuffs intended for commercial use. Kitchens and associated areas are special rooms in which meals are prepared, where tableware and equipment is washed, cleaned and food is stored. This European Standard is applicable to kitchen ventilation ceilings except those used in domestic kitchens. A method of verification of each requirement is also specified. Unless otherwise specified, the requirements of this standard need to be checked by way of inspection and/or measurement. NOTE Please note the possible existence of additional or alternative local national regulations on installation, appliance requirements and inspection, maintenance and operation.

STANDARDIKAVANDITE ARVAMUSKÜSITLUS

Selleks, et tagada standardite vastuvõtmise, järgides konsensusse põhimõtteid, peab standardite vastuvõtmisele eelnema standardikavandite avalik arvamusküsitlus, milleks ettenähtud perioodi jooksul (üldjuhul 60 päeva) on asjast huvitatui võimalik tutvuda standardikavanditega, esitada kommentaare ning teha ettepanekuid parandusteks. Eriti on oodatud teave, kui rahvusvahelist või Euroopa standardikavandit ei peaks vastu võtma Eesti standardiks (vastuolu Eesti õigusaktidega, pole Eestis rakendatav jt põhjustel).

Arvamusküsitlusele esitatakse Euroopa ja rahvusvahelised standardikavandid, mis on kavas üle võtta Eesti standarditeks, ja Eesti algupärased standardikavandid ning algupärase tehniliste spetsifikatsioonide ja juhendite kavandid.

Iga arvamusküsitlusel oleva kavandi kohta on esitatud alljärgnev informatsioon:

- tähis;
- pealkiri;
- käsitusala;
- keel (en = inglise; et = eesti);
- Euroopa või rahvusvahelise alusdokumendi tähis, selle olemasolul;
- asendusseos, selle olemasolul;
- arvamuste esitamise tähtaeg.

Kavanditega saab tutvuda ja kommentaare esitada Eesti Standardimis- ja Akrediteerimiskeskuse veebilehel asuvas kommenteerimisportaalis: <https://www.evs.ee/kommenteerimisportaal/>

Igal kuul uuendatav teave eestikeelsena avaldatavate Eesti standardite kohta, sh eeldatavad kommenteerimise ja avaldamise tähtpäevad, on leitav Eesti Standardimis- ja Akrediteerimiskeskuse veebilehel avaldatavast standardimisprogrammist.

Earth-moving machinery - Basic types - Identification and terms and definitions (ISO/DIS 6165:2021)

This document gives terms and definitions and an identification structure for classifying earth-moving machinery designed to perform the following operations: — excavation; — loading; — transportation; — drilling, spreading, compacting or trenching of earth, rock and other materials, during work, for example, on roads and dams, in quarries and mines and on building sites. The purpose of this document is to provide a clear means to identify earth-moving machinery according to its function and design configurations and with secondary classifications according to its operating mass and control operator configuration. Annex A provides a procedure based on the identification structure used by this document to classify the machinery and introduce detailed identifications consistent with the logic implied by the structure. Annex B provides a hierarchy of the operator control configurations for earth-moving machinery.

Innovation management - Tools and methods for intellectual property management - Guidance (ISO 56005:2020)

Efficient management of IP is key to support the process of innovation, is essential for organizations' growth and protection, and is their engine for competitiveness. This document proposes guidelines for supporting the role of IP within innovation management. It aims to address the following issues concerning IP management at strategic and operational levels: — Creating an IP strategy to support innovation in an organization; — Establishing systematic IP management within the innovation processes; — Applying consistent IP tools and methods in support of efficient IP management. This document can be used for any type of innovation activities and initiatives.

Water quality - Sampling - Part 10: Guidance on sampling of waste waters (ISO 5667-10:1992)

Standardi käesolev osa esitab olme- ja tööstusreovee proovivõtu põhimõtted, sh proovivõtuplaani koostamine ja proovivõtumeetodid. See standardi osa hõlmab reovett kõikides vormides, sh tööstusreovesi, radioaktiivne reovesi, jahutusvesi, toor- ja puhastatud olmereovesi. Selles standardi osas käsitletakse erinevaid kasutatavaid proovivõtumeetodeid ja rakendatavaid reegleid, et tagada proovide esinduslikkus. Standardi see osa ei hõlma proovivõttu õnnetusjuhtumite ja avariide korral, kuid teatud juhtudel võib kohaldada selles standardi osas kirjeldatud proovivõtumeetodeid.

Air conditioners, liquid chilling packages, heat pumps, process chillers and dehumidifiers with electrically driven compressors - Determination of the sound power level - Part 1: Air conditioners, liquid chilling packages, heat pumps for space heating and cooling, dehumidifiers and process chillers

This document establishes requirements for determining, in accordance with a standardized procedure, the sound power level emitted into the surrounding air by air conditioners, heat pumps, liquid chilling packages with electrically driven compressors when used for space heating and/or cooling, and/or for process, as described in the prEN 14511 series, and dehumidifiers, as described in EN 810. This document also covers the measurement of the sound power level of evaporatively cooled condenser air conditioners, as defined in EN 15218. However, the measurement will be done without external water feeding and these units will thus be considered as the other air conditioners covered by the prEN 14511 series. It is emphasized that this measurement standard only refers to airborne noise.

Electroacoustics - Hearing aids - Part 0: Measurement of the performance characteristics of hearing aids

This part of IEC 60118 gives recommendations for the measurement of the performance characteristics of air conduction hearing aids measured with an acoustic coupler or occluded ear simulator. This part of IEC 60118 is applicable to the measurement and evaluation of the electroacoustical characteristics of hearing aids, for example for type testing and manufacturer data sheets. This part of IEC 60118 is also applicable for the measurement of the performance characteristics of hearing aids for production, supply and delivery quality-assurance purposes. For these measurements the frequency range is limited to 5 kHz. The manufacturer can assign nominal values. The measurement results obtained by the methods specified in this part of IEC 60118 will express the performance under conditions of the measurement and may deviate substantially from the performance of the hearing aid under actual conditions of use. This part of IEC 60118 primarily uses an acoustic coupler according to IEC 60318-5 which is only intended for loading a hearing aid with specified acoustic impedance and is not intended to model the sound pressure in a person's ear. The occluded ear simulator according to IEC 60318-4 may be used for measurements reflecting the output level in the normal human ear. The acoustic coupler according to IEC 60318-8 may be used for extended high frequency measurements and for deep insert hearing aids. This part of IEC 60118 also covers measurement of hearing aids with non-acoustic inputs, such as wireless, inductive or electrical input. For the measurement of the performance characteristics of hearing aids for simulated in situ working conditions, IEC 60118-8 is preferred. For measurement of hearing

aids under typical user settings and using a speech-like signal, IEC 60118-15 is preferred. According to the requirements in this standard, conformance to a specification is established when measured deviations from design goals do not exceed the corresponding acceptance limits AND the uncertainty of measurement does not exceed the corresponding maximum permitted uncertainty of measurement for a coverage probability of 95%. It is not mandatory to perform all tests contained in this document. In the case of custom-made in the ear hearing aids, the data supplied by the manufacturer applies only to the particular hearing aid being measured.

Laboratory resistors. Part 2: Laboratory AC resistors

This part of IEC 60477 applies to resistors intended as laboratory AC resistors for use over a range of frequencies from DC up to a stated frequency which is not in excess of 1 MHz. Such resistors are hereinafter referred to as "AC resistors". In addition to satisfying the requirements of IEC 60477, resistors satisfying the requirements of this standard are designed to have a small variation of resistance and a small phase displacement over the stated frequency range. Because of the uncertainties in AC properties which can result from stray inductances, stray capacitances, eddy currents, dielectric absorption effects and skin effect, the AC resistors to which this standard applies are classified according to their construction (see Annex D), as follows: a) Two-terminal resistor which each of one terminal both for current and potential; b) Three-terminal resistor which has one more shield terminal (also could be called as guard terminal) connected to the electric screen than the two-terminal resistor to reduce the stray capacitances effect; c) Four-terminal resistor which has independent current terminals and potential terminals to reduce the stray inductances and contact resistances; d) Five-terminal resistor which has one more shield terminal than the four-terminal resistor; e) Four-terminal coaxial resistor which has two terminal-pairs with the outer shield conductors working as the low terminal of current or potential; f) Two-terminal-pair resistor which has two terminal-pairs with the outer shield conductors working as the return path for the signal current (not grounded); g) Four-terminal-pair resistor which has four terminal-pairs with the outer shield conductors working as the return path for the signal current (not grounded) to eliminate the effect of mutual coupling between the current and potential leads.

Plastics piping systems for non-pressure underground conveyance and storage of non-potable water - Manholes, inspection chambers and road gullies for storm water systems made of unplasticized poly(vinyl chloride) (PVC-U), polypropylene (PP) and polyethylene (PE) - Part 1: Specifications for storm water manholes and inspection chambers)

This document specifies the definitions and requirements for unplasticized poly(vinyl chloride) (PVC-U), polypropylene (PP), polypropylene with mineral modifier (PP-MD) or polyethylene (PE) storm water manholes and storm water inspection chambers intended for non-pressure use only in storm water systems to a maximum depth of 6 m from ground level to the lowest point of the storm water manhole or inspection chamber. NOTE 1 Products complying with EN 13598-2 may also be used for storm water systems dependent on the requirement of the storm water system. Storm water manholes and inspection chambers complying with this document are intended to be used in pedestrian or vehicular traffic areas outside the building structure. NOTE 2 Products complying with this document can also be used in non-traffic areas. Storm water manholes and inspection chambers complying with this document are made from a prescribed set of components that are manufactured from unplasticized poly(vinyl chloride) (PVC-U), polypropylene (PP), polypropylene with mineral modifier (PP-MD) or polyethylene (PE) and assembled together. Storm water manholes and inspection chambers complying with this document may be equipped with optional devices (e.g. removable sand or silt bucket, flow regulators, ventilation parts, etc.), however the performance of these optional devices is not covered within the scope of this document. NOTE 3 Products complying with this standard can be installed in underground applications without additional static calculation. NOTE 4 The complete Storm water manhole or inspection chamber assembly can also include items which are not covered by this document (for example near surface or surface components). NOTE 5 Storm water manholes and inspection chambers can be supplied with covers, frame covers and gratings complying with the relevant part of EN 124 [1]. Storm water manhole and inspection chamber components can be manufactured by various methods e.g. extrusion, injection moulding, rotational moulding, low-pressure moulding or fabricated. NOTE 6 Storm water manholes and inspection chambers can be site assembled from different components, but can also be manufactured as a single unit. NOTE 7 Storm water manholes and inspection chambers can be subject to national regulations and / or local provisions.

Desktop and notebook computers - Measurement of energy consumption (TA 19)

This International Standard covers personal computing products. It applies to desktop and notebook computers as defined in 4.1 that are marketed as final products and that are hereafter referred to as the equipment under test (EUT) or product. This standard specifies: - a test procedure to enable the measurement of the power and/or energy consumption in each of the EUT's power modes; - formulas for calculating the typical energy consumption (TEC) for a given period (normally annual); - a majority profile that should be used with this standard which enables conversion of average power into energy within the TEC formulas; - a pre-defined format for the presentation of results. This standard does not set any pass/fail criteria for the EUTs. Users of the test results should define such criteria.

EN 15512:2020/prA1

Steel static storage systems - Adjustable pallet racking systems - Principles for structural design

This European Standard specifies the structural design requirements applicable to all types of adjustable beam pallet rack systems fabricated from steel members intended for the storage of unit loads and subject to predominantly static loads. Both un-braced and braced systems are included. This European Standard gives guidelines for the design of clad rack buildings where requirements are not covered in EN 1993. The requirements of this European Standard also apply to ancillary structures, where rack components are employed as the main structural members. This European Standard does not cover other generic types of storage structures. Specifically, this European Standard does not apply to mobile storage systems, drive-in, drive-through and cantilever racks or static steel shelving systems, nor does this European Standard establish specific design rules for the assessment of racking in seismic areas.

Earth-moving machinery - Basic types - Identification and terms and definitions (ISO/DIS 6165:2021)

This document gives terms and definitions and an identification structure for classifying earth-moving machinery designed to perform the following operations: — excavation; — loading; — transportation; — drilling, spreading, compacting or trenching of earth, rock and other materials, during work, for example, on roads and dams, in quarries and mines and on building sites. The purpose of this document is to provide a clear means to identify earth-moving machinery according to its function and design configurations and with secondary classifications according to its operating mass and control operator configuration. Annex A provides a procedure based on the identification structure used by this document to classify the machinery and introduce detailed identifications consistent with the logic implied by the structure. Annex B provides a hierarchy of the operator control configurations for earth-moving machinery.

Petroleum industry and products - Determination of composition of refinery heating gas and calculation of carbon content and calorific value - Gas chromatography method

This document defines a gas chromatographic analysis for the determination of the composition of fuel gases, as used in refinery heating gas. These results are used to calculate the carbon content and the lower calorific value. With this gas chromatographic analysis, an overall of 23 refinery heating gas components are determined in concentrations as typically found in refineries (see Table 1 for further details). Water is not analysed. The results represent dry gases. NOTE 1 Depending on the equipment used, there is a possibility to determine higher hydrocarbons as well. NOTE 2 For the purposes of this document, the terms "% (V/V)" is used to represent the volume fraction (ϕ). IMPORTANT - This document does not purport to address all of the safety problems associated with its use. It is the responsibility of the user of this document to establish appropriate safety and health practices and determine the applicability of regulatory limitations.

Chimneys - Requirements for metal chimneys - Part 2: Metal flue liners and connecting flue pipes

This document specifies the characteristics of performance for rigid or flexible metal flue liners, rigid metal connecting flue pipes and their fittings used to convey the products of combustion from appliances to the outside atmosphere (including their supports) or the chimney. This document specifies sootfire resistant flue liners, connecting flue pipes and fittings for combustion appliances burning solid, liquid and gaseous fuels and non-sootfire resistant flue liners, connecting flue pipes and fittings for combustion appliances burning liquid and gaseous fuels only. NOTE This means that flue liners, connecting flue pipes and fittings designated "O" are not suitable for combustion appliances burning solid fuel. Vitreous enamelled connecting flue pipes are also covered by this document. Rigid flue liners can be used as flue liners for renovation or adaptation of existing chimneys and as flue liners of custom built chimneys. Flexible metal flue liners described in this document are exclusively for renovation or adaptation of existing chimneys. Flexible connecting flue pipes and extensible flexible products designed to be compressed or extended along their length are excluded from the scope of this document. Single-wall and multi-wall system chimney products (chimney sections, chimney fittings and terminals, including supports) are covered by prEN 1856-1:2021, even if used as liners for existing chimneys or connecting flue pipes.

Thermal insulating products for building equipment and industrial installations - Determination of water vapour transmission properties of preformed pipe insulation (ISO/DIS 12629:2021)

This European Standard specifies the equipment and procedure for determining the water vapour transmission properties in the steady state under specified test conditions for test specimens of preformed pipe insulation. It is applicable to thermal insulating products. It is intended to be used for homogeneous materials (see NOTE) and for products which may have integral skins or adhered facings of some different material. NOTE A material is considered to be homogeneous in terms of mass distribution if its density is approximately the same throughout, i.e. if the measured density values are close to its mean density. The water vapour transmission rate and permeance values are specific to the test specimen (i.e. the product) thickness tested. For homogeneous products, the water vapour permeability is a property of the material. If the pipe insulation is cut from a flat product, then the water vapour transmission properties can be obtained from tests carried out on the flat product with similar properties in accordance with EN 12086.

Guidance on design, selection and installation of vents to safeguard the structural integrity of enclosures protected by gaseous fire-extinguishing systems (ISO/DIS 21805:2021)

This document provides guidance on fulfilling the requirements contained in ISO 6183:2009, 6.4.1 and 7.4.1 and ISO 14520-1:2015, 5.2.1 (h) and 5.3 (h), in respect to over and under pressurization venting and post-discharge extract. It considers the design, selection and installation of vents to safeguard the structural integrity of enclosures protected by fixed gaseous extinguishing systems and the post-discharge venting provisions where used.

93 RAJATISED

prEN 17670-1

Plastics piping systems for non-pressure underground conveyance and storage of non-potable water - Manholes, inspection chambers and road gullies for storm water systems made of unplasticized poly(vinyl chloride) (PVC-U), polypropylene (PP) and polyethylene (PE) - Part 1: Specifications for storm water manholes and inspection chambers

This document specifies the definitions and requirements for unplasticized poly(vinyl chloride) (PVC-U), polypropylene (PP), polypropylene with mineral modifier (PP-MD) or polyethylene (PE) storm water manholes and storm water inspection chambers intended for non-pressure use only in storm water systems to a maximum depth of 6 m from ground level to the lowest point of the storm water manhole or inspection chamber. NOTE 1 Products complying with EN 13598-2 may also be used for storm water systems dependent on the requirement of the storm water system. Storm water manholes and inspection chambers complying with this document are intended to be used in pedestrian or vehicular traffic areas outside the building structure. NOTE 2 Products complying with this document can also be used in non-traffic areas. Storm water manholes and inspection

chambers complying with this document are made from a prescribed set of components that are manufactured from unplasticized poly(vinyl chloride) (PVC-U), polypropylene (PP), polypropylene with mineral modifier (PP-MD) or polyethylene (PE) and assembled together. Storm water manholes and inspection chambers complying with this document may be equipped with optional devices (e.g. removable sand or silt bucket, flow regulators, ventilation parts, etc.), however the performance of these optional devices is not covered within the scope of this document. NOTE 3 Products complying with this standard can be installed in underground applications without additional static calculation. NOTE 4 The complete Storm water manhole or inspection chamber assembly can also include items which are not covered by this document (for example near surface or surface components). NOTE 5 Storm water manholes and inspection chambers can be supplied with covers, frame covers and gratings complying with the relevant part of EN 124 [1]. Storm water manhole and inspection chamber components can be manufactured by various methods e.g. extrusion, injection moulding, rotational moulding, low-pressure moulding or fabricated. NOTE 6 Storm water manholes and inspection chambers can be site assembled from different components, but can also be manufactured as a single unit. NOTE 7 Storm water manholes and inspection chambers can be subject to national regulations and / or local provisions.

Plastics piping systems for non-pressure underground conveyance and storage of non-potable water - Manholes, inspection chambers and road gullies for storm water systems made of unplasticized polyvinyl chloride (PVC-U), polypropylene (PP) and polyethylene (PE) - Part 2: Specification for road gullies

This document specifies the definitions and requirements for unplasticized poly(vinyl chloride) (PVC-U), polypropylene (PP), polypropylene with mineral modifier (PP-MD) or polyethylene (PE) storm water road gullies intended for non-pressure use only in storm water and combined systems installed to a maximum depth of 4 m from ground level to the lowest point of the storm water road gully. Storm water road gullies complying with this document are intended to be used in pedestrian or vehicular traffic areas outside the building structure. NOTE 1 Products complying with this document can also be used in non-traffic areas. NOTE 2 Storm water road gullies may be subject to national regulation which limit the maximum installation depth and / or local provisions. The installer should check for compliance prior to installation. Storm water road gullies complying with this document are made from a prescribed set of components that are manufactured from unplasticized poly(vinyl chloride) (PVC-U), polypropylene (PP), polypropylene with mineral modifier (PP-MD) or polyethylene (PE) and assembled together. Storm water road gullies complying with this document may be equipped with optional devices (e.g. removable sand or silt bucket, leaf separator etc.), however the performance of these optional devices is not covered within the scope of this document. Storm water road gully components can be manufactured by various methods e.g. extrusion, injection moulding, rotational moulding, low-pressure moulding, blow moulding, thermoforming or fabricated. NOTE 3 Products complying with this standard can be installed in underground applications without additional static calculation NOTE 4 The complete storm water road gully assembly can also include items non-plastic items (near surface or surface components for example) which are not covered by this document. NOTE 5 The complete storm water road gully assembly can be supplied with covers, frame covers and gratings complying with the relevant part of EN 124 [1] which are not covered by this document. However, reference should be made to this document for geometrical characteristics where applicable. NOTE 6 Storm water road gullies can be site assembled from different components, but can also be manufactured as a single unit. - storm water road gullies with or without sand / silt trap; - storm water road gullies with or without water seal preventing odour release; - storm water road gullies where the traffic load will or will not be carried by the complete gully (resp. "Direct loaded storm water gullies" or "Indirect loaded storm water gullies").

prEN ISO 11296-9

Plastics piping systems for renovation of underground non-pressure drainage and sewerage networks - Part 9: Lining with a rigidly anchored plastics inner layer (ISO/DIS 11296-9:2021)

This document, in conjunction with EN ISO 11296-1, specifies requirements and test methods for pipes and fittings for the renovation of underground non-pressure drainage and sewerage networks by lining with a single rigid annulus of structural cementitious grout formed behind a plastics inner layer. This plastics layer serves as permanent formwork anchored to the grout. This document is applicable to plastics inner layers and grout systems with or without steel reinforcement. It does not apply to the structural design of the lining system. NOTE Systems with multiple annuli are available, but these are controlled by patent rights and not covered by this Standard.

TÖLKED KOMMENTEERIMISEL

Allpool on toodud teave kommenteerimisetappi jõudnud eesti keelde tölgitavate Euroopa või rahvusvaheliste standardite ja standardilaadsete dokumentide kohta ja inglise keelde tölgitavate algupäraste Eesti standardite ja dokumentide kohta.

Tölkkekavanditega saab tutvuda ja kommentaare esitada Eesti Standardimis- ja Akrediteerimiskeskuse veebilehel asuvas kommenteerimisportaalil: <https://www.evs.ee/kommmenteerimisportaal/>

Igal kuul uuendatav teave eestikeelsena avaldatavate Eesti standardite kohta, sh eeldatavad kommenteerimise ja avaldamise tähtpäevad, on leitav Eesti Standardimis- ja Akrediteerimiskeskuse veebilehel avaldatavast standardimisprogrammist.

EVS-EN ISO 15681-2:2018

Vee kvaliteet. Ortofosfaadi ja üldfosfori sisalduse määramine vooluanalüüsил (FIA ja CFA) Osa 2: Pidevvooluanalüüsatorni meetod (CFA) (ISO 15681-2:2018)

See dokument täpsustab pidevvooluanalüüs (CFA) meetodeid ortofosfaadi määramiseks massikontsentratsiooni vahemikus 0,01 mg/l kuni 1,00 mg/l P ja üldfosfori määramiseks massikontsentratsiooni vahemikus 0,10 mg/l kuni 10,0 mg/l P. Meetod sisaldb ka orgaanilise fosfori ühendite mineraliseerimist ja anorgaaniliste polüfosfaatühendite hüdrolüüsi, mis viakse läbi kas manuaalselt, nagu kirjeldatud standardis ISO 6878 ja viidetes [4], [5] ja [7] või integreeritud ultraviolett (UV) mineraliseerimis- ja hüdrolüüsiseadmega. See dokument sobib erinevatele veelikidele nagu põhja-, joogi-, pinna-, nõrg- ja reovesi. Rakendusvahemikku saab muuta muutes läbiviimise tingimus. See meetod sobib ka mereveele, aga muutustega tundlikkuses rakendades kande- ja kalibreerimislahustele proovide soolsust. See meetod on rakendatav analüüsidele kasutades küvette 10 mm kuni 50 mm sõltuvalt sellest, mis on soovitud rakendusulatus. Eriti tundliku analüüsi jaoks saab kasutada 250 mm ja 500 mm pikkuseid kapillaar voolurakke (LCFC). Kuid meetod ei ole valideeritud nende kahe kasutusjuhu jaoks. Võib olla vaja teha muutusi tundlikkuses ja kalibreerimislahustes. Lisas A on toodud CFA süsteemi näide. Lisas B on toodud suutlikkuse andmed laboritevahelistest katsetest. Lisas C on toodud infot ortofosaat-P ja üldfosfori määramise kohta kasutades CFA-d ja tina(II)kloriidid redutseerimist.

Mittepurustavad katsed. Kapillaarkatse. Osa 1: Üldpöhimötted

Selles dokumendis kirjeldatakse katsetatava materjali pinnani avatud katkevuste, nt pragude, ülekattete, kurdude, poorsuse ja liitavigade avastamiseks kasutatavat kapillaarkatsemeetodit, kasutades valget valgust või UV-A (365 nm) kiurgust. Seda rakendatakse peamiselt metallsetele materjalidele, kuid võib kasutada ka teistel materjalidel eeldusel, et need ei reageeri katsetamiseks kasutatavate ainetega ja et need ei oleks liiga poorsed (valud, sepised, keevised, keraamika jne). See dokument sisaldb ka protsessi ja kontrollkatsete nõudeid, kuid ei ole mõeldud kasutamiseks aktsepteerimise kriteeriumina. See ei anna teavet üksiku kontrollisüsteemi sobivusest erirakendustele ega anna ka nõudeid katsevahenditele. MÄRKUS 1 Kapillaarkatseainete ainetate oluliste omaduste määramiseks ja seireks kasutatavad meetodid on toodud standardites ISO 3452-2 ja ISO 3452-3. MÄRKUS 2 Términit "katkevus" kasutatakse siinses dokumendis tähenodus, millele ei ole lisatud aktsepteerimise või mitteakteespeteerimisega seonduvat hinnangut. MÄRKUS 3 CEN / TR 16638 käsitleb kapillaarkontrolli kasutades aktiinilist sinist valgust.

prEVs-EN 1264-3

Veepõhisid piirdesisesed kütte- ja jahutussüsteemid Osa 3: Dimensioneerimine

Standard EN 1264 annab juhisid hoonetesse, elukondlikeks ja mitte elukondlikeks (nt. kontorid, avalikud, kummerts ja tööstushooned), soojsutmugavuse eesmärgil pindadesse paigaldatud kütte- ja jahutussüsteemidele. Standard EN 1264 annab juhisid köetava või jahutatava ruumi välispõirdesse paigaldatud veepõhiste kütte- ja jahutussüsteemide jaoks. Samuti määratleb teiste soojsuskandjate kasutuse vee asemel, nagu on sobiv. Standard EN 1264 määratleb standardiseeritud toote omadused arvutuste ja küttekoormuse katsete kaudu tehniliste spetsifikatsioonide ja sertifikaatide jaoks. Arvutusteks, nende süsteemide rajamise ja kasutamise jaoks, vaata standardeid EN 1264 3 ja EN 1264 4 tüüpide A, B, C, D, H, I ja J. Tüüpide E, F ja G jaoks vaata standardit EN ISO 11855. EN 1264 määratletud süsteemid kulgnevad hoone välispõirde konstruktsiooniga, paigaldatud otse või kinnituskanduritega. Standard EN 1264 ei määratle ripplagedesse paigaldatud laesüsteeme, kus süsteemi ja ehituskonstruktsiooni vahel on kavandatud avatud õhuvahе, mis võimaldab õhu termilist ringlust. Nende süsteemide

soojuskoormust saab määrata vastavalt standarditele EN 14037 and EN 14240. EN 1264-3 täpsustab EN 1264-2 ja EN 1264-5 tulemuste kasutamist praktikas. Küttesüsteemide puhul võetakse pinnatemperatuuri määramisel arvesse füsioloogilisi piiranguid. Põrandküttesüsteemide korral realiseeritakse piirangud vastavalt standardile EN 1264-2 määratud karakteristikutele ja piirköveratele. Jahutussüsteemide puhul võetakse arvesse ainult kastepunkti piiranguid. Valdavas praktikas tähendab see, et kaasatud on ka füsioloogilised piirangud.

ALGUPÄRASTE STANDARDITE JA STANDARDILAADSETE DOKUMENTIDE KOOSTAMINE

Allpool on toodud teave eelmise EVS Teataja avaldamise järel Eesti Standardimis- ja Akrediteerimiskeskusele esitatud algupäraste standardite ja standardilaadsete dokumentide koostamis-, muutmis- ja uustöötlusettepanekute kohta, millega algatatakse Eesti algupärase dokumendi koostamise protsess.

Rohkem infot koostatava dokumendi kohta saab EVS-i standardiosakonnast: standardiosakond@evs.ee.

Igal kuul uuendatav teave eestikeelsena avaldatavate Eesti standardite kohta, sh eeldatavad kommenteerimise ja avaldamise tähtpäevad, on leitav Eesti Standardimis- ja Akrediteerimiskeskuse veebilehel [avaldatavast standardimisprogrammist](#).

prEVS 835

Hoone veevärk

Water supply systems inside buildings

See standard kehtib hoone veevärkidele, mis on ühendatud ühisveevärgiga või kohaliku veevarustusallikaga. Hoone veevärgi all mõistetakse hoonesist külma- ja soojaveetorustikku koos toruarmatuuriga, veevarustusseadmeid ja maa-alust veotoru hoone piires kuni vundamendini. Standardi nõudeid tuleb täita nii uue hoone veevärgi projekteerimisel, paigaldamisel ja katsetamisel kui ka olemasolevate veevärkide remondil ja ümberehitusel.

Asendab dokumenti: EVS 835:2014

Koostamisettepaneku esitaja: Eesti Veevarustuse ja Kanalisatsiooni Inseneride Selts

prEVS 844

Hoonete kütte projekteerimine

Design of heating for buildings

Selles Eesti standardis määratatakse nõuded Eesti Vabariigis ehitatavate ja rekonstrueeritavate elu-, üldkasutatavate ja tööstushoonete kütte projekteerimisel. Selles standardis käsitletakse nii välisõhu kui ka ruumide siseõhu arvutuslikke temperatuure, küttesüsteemi valikut hoonetüübti järgi, soovitatavaid vee kiirusi ja röhukadusid kütterustikes, küttesüsteemi peale- ja tagasisooluvee temperatuure, liigsoojuse arvestamist ruumides, küttekehade valikut ja paigutusviise, reguleerimis- ja sulgemisarmatuure, torumaterjale ning soojuse säastlikku kasutamist.

STANDARDITE JA STANDARDILAADSETE DOKUMENTIDE ÜLEVAATUS

Algupärase Eesti standardi ülevaatus toimub üldjuhul iga viie aasta järel ning selle eesmärk on kontrollida standardi tehnilist taset, vastavust aja nõuetele, vastavust kehtivatele õigusaktidele, kooskõla rahvusvaheliste või Euroopa standarditega jne.

Ülevaatuse tulemusena jäetakse standard kehtima, algatatakse standardi muudatuse või uustöötluse koostamine, tühistatakse standard või asendatakse see ülevõetava Euroopa või rahvusvahelise standardiga.

PIKENDAMISKÜSITLUS

EVS 875-12:2016

Vara hindamine. Osa 12: Hindamine hüvitamise eesmärgil

Property valuation - Part 12: Valuation for Compensation

Standardisari EVS 875 käsitleb vara hindamist. Standardite kasutusalad on vara hindamise ja hinnangute kasutamisega seotud tegevused, eeskõige laenutagatiste ja finantsaruandlusega seotud tegevused. Standardite kasutajad on vara hindajad, kinnisvaraspetsialistid, ehitusspetsialistid, keskkonnaspetsialistid, finantsaruandlusega tegelevad spetsialistid (raamatupidajad, audiitorid), krediidiutasutused, kõrgemad õppeasutused. Standardisari loob aluse vara hindamise ühtsele käsitlusele, rahuldades nii era- kui ka avaliku sektori vajadusi. See Eesti standard on standardisarja EVS 875 „Vara hindamine“ osa, milles esitatakse hindamise põhimõtted hüvitamisel. Hüvitusvärtuse hindamise vajadus võib tekkida sundvõõrandamisel, aga ka sundvõõrandamisele eelneva poolte vabal tahtel põhineva võõrandamise puhul. Tegemist on standardi EVS 875-12:2010 „Vara hindamine. Osa 12: Hindamine hüvitamise eesmärgil“ uustöötlusega.

Pikendamisküsitluse lõppkuupäev: 30.06.2021

EVS 875-5:2016

Vara hindamine. Osa 5: Hindamine finantsaruandluse eesmärgil

Property valuation - Part 5: Valuation for Financial Reporting

Standardisari EVS 875 käsitleb vara hindamist. Standardite kasutusalad on vara hindamise ja hinnangute kasutamisega seotud tegevused, eeskõige laenutagatiste ja finantsaruandlusega seotud tegevused. Standardite kasutajad on vara hindajad, kinnisvaraspetsialistid, ehitusspetsialistid, keskkonnaspetsialistid, finantsaruandlusega tegelevad spetsialistid (raamatupidajad, audiitorid), krediidiutasutused, kõrgemad õppeasutused. Standardisari loob aluse vara hindamise ühtsele käsitlusele, rahuldades nii era- kui ka avaliku sektori vajadusi. See Eesti standard on standardisarja EVS 875 „Vara hindamine“ osa, milles määratletakse väärused, mida vara hindamise standardid hõlmavad hindamisel finantsaruandluse eesmärgil. Tegemist on standardi EVS 875-5:2010 „Vara hindamine. Osa 5: Hindamine finantsaruandluse eesmärgil“ uustöötlusega.

Pikendamisküsitluse lõppkuupäev: 30.06.2021

EVS 885:2005

Ehituskulude liigitamine

Classification of construction costs

Standardis leiavad käsitlemist: • ehituskulude liigitus; • töömahtude mõõtmise ja tööde arvestamise reeglid. Standardi alusel ehituskulude liigitamine ning töömahtude arvutamise reeglite kasutamine loob võimaluse kulusid ühtviisi nimetada, määratleda ja mõista nii omaniku, tellija, projekteerijate kui ehitajate (pea- ja alltöövõtjate) ning projektiga seotud konsultantide poolt. Iga organisatsiooni (tellija-organisatsioon; projektbüroo; ehitusettevõte) siseselt võib liigitus toodud määraguid täpsustada ja põhjendatult ümber kujundada. Samas ei tohi sellised ettevõttesisesed muudatused saada takistuseks andmete esitamisel avalikkusele ning teistele osapooltele siis, kui vajatakse kirjeldusi käesolevas standardis toodud liigitu nõudeid järgides, näiteks riigihangete pakkumisdokumentides. Käesoleva standardi ehituskulude liigitu on kasutatav hoonete, insenerehitiste ja rajatiste ehitamise ning rekonstruktsioonide ehitusprojekt- ja hankedokumentide koostamisel ning projektide arengu järgnevatel etappidel.

Pikendamisküsitluse lõppkuupäev: 30.06.2021

ALGUPÄRASTE STANDARDITE KEHTIVUSE PIKENDAMINE

Eesti standardite ülevaatuse tulemusena on pikendatud järgmiste standardite kehtivus:

EVS 901-2:2016

Tee-ehitus. Osa 2: Bituumensideained Road construction. Part 2: Bituminous binders

See standard määratleb teebituumeni, polümeermodifitseeritud bituumeni ja katioonsete bituumenemulsioonide margid, mis kogemuse ja uuringute alusel sobivad Eesti teede, lennuväljade ja muude kattega alade ehitamiseks ja hooldamiseks. Määratletud bituumensideainete margid ei välista muude Euroopa standardite kohaste sideainemarkide kasutamist, kui nende sobivus määratud kasutusotstarbeks on töendatud. Kõvade teebituumenite, mitmemargiliste teebituumenite ning vedeldatud ja pehmendatud bituumensideainete osas puudub praegusel ajal Eestis piisav kasutuskogemus. Sellise kasutuskogemuse kogunemisel ajakohastatakse seda standardit vastavalt. Seni juhindutakse valikute tegemisel Euroopa tootestandardite sätetest. See Eesti standard määratleb tarnijate ja klientide vaheliste kvaliteedikokkulepete alused. Bituumensideaine markide esitamine tabelites 1 kuni 3, 5 kuni 6, 8 kuni 9 ja 11 võimaldab valida sideaine kõige sobivama spetsifikatsiooni, arvestades kohalikke kliima- ja kasutustingimusi ning praeguseks ajaks kogunenud kogemusi.

EVS 918:2016

Nafta ja vedelad naftatooted. Mõõtemahutites sisalduva vedeliku koguse käsitsi mõõtmine ja mõõtemääramatuse hindamine

Petroleum and liquid petroleum products. Measurement of content of storage tanks by manual methods and calculation of measurement uncertainty

Selles Eesti standardis antakse juhised atmosfääriröhu all olevates statsionaarsetes silindrilistes mahutites asuva nafta ja vedelate naftatoode (edaspidi vedelike) standardtingimustele vastava mahu ja massi arvutamiseks. Standard kirjeldab vedelike mahu ja massi arvutusi ja selleks vajalikke mõõtmisi: — vedeliku sügavuse käsitsi mõõtmist ujuva katusega või ilma ujuva katuseta mahutites; — vaba vee sügavuse käsitsi mõõtmist; — mahuti baaskõrguse käsitsi mõõtmist; — vedeliku temperatuuri käsitsi mõõtmist; — vedeliku ning mahu ja massi arvutamist standardtingimustel; — vedeliku mahu ja massi mõõtemääramatuse hindamist. Standard on rakendatav järgmistel tingimustel: — vedeliku tihedus peab olema piirides 611,16 kg/m³ kuni 1163,86 kg/m³; — vedeliku temperatuur mõõtmiste ajal peab olema vahemikus –25 °C kuni +100 °C; — vedeliku minimaalne mõõdetav sügavus peab olema mitte väiksem kui 500 mm; — mahutite kalibreerimistabelid peavad olema koostatud vastavalt standardi EVS-ISO 7507-1, EVS-ISO 12917-1 või EVS-ISO 12917-2 nõuetele; — mahuti kalle ei ületa 3 %; — mahutis sisalduva vedeliku ja kalibreerimistabeli koostamisel aluseks olnud vedeliku tiheduste väärused ei tohi erineda rohkem kui ±30 %. MÄRKUS See standard ei sisalda vedelike käitlemisel rakendatavaid ohutusnõudeid.

Kehtima jätmise alus: EVS/TK 37 otsus 19.05.2021 2-5/30; teade pikendamisküsitlusest 15.03.2021 EVS Teatajas

TEADE EUROOPA STANDARDI OLEMASOLUST

Selles rubriigis avaldame teavet Euroopa standardite ja CENELEC-i harmoneerimisdokumentide kohta, mille on Eesti Standardimis- ja Akrediteerimiskeskusele kättesaadavaks teinud Euroopa standardimisorganisatsioonid, ja mille Eesti standardina avaldamiseks on vajalik täiendav ettevalmistusaeg. Selliste teadete avaldamine võib olla vajalik, et tagada Euroopa standardite jõustumine Eesti standardina samal ajal nii eesti- kui ka ingliskeelsena.

Igal kuul uuendatav teave eestikeelsena avaldatavate Eesti standardite kohta, sh eeldatavad kommenteerimise ja avaldamise tähtpäevad, on leitav Eesti Standardimis- ja Akrediteerimiskeskuse veebilehel [avaldatavast standardisprogrammist](#). Lisateave standardiosakonnast: standardiosakond@evs.ee.

AVALDATUD EESTIKEELSED STANDARDIPARANDUSED

Selles rubriigis avaldame teavet Eesti standardite paranduste koostamise kohta. Standardiparandus koostatakse toimetuslikku laadi vigade (trükkivead jms) kõrvaldamiseks standardist. Eesti standardi paranduse tähis kootseb standardi tähisest ja selle lõppu lisatud tähtedest AC.

Näiteks standardile EVS XXX:YYYY tehtud parandus kannab eraldi avaldatuna tähist EVS XXX:YYYY/AC:ZZZZ. Parandatud standardi tähis ei muutu.

EVS 867:2011/A1:2013/AC:2021

UUED EESTIKEELSED STANDARDID JA STANDARDILAADSED DOKUMENDID

Igal kuul uuendatav teave eestikeelsena avaldatavate Eesti standardite kohta, sh eeldatavad kommenteerimise ja avaldamise tähtpäevad, on leitav Eesti Standardimis- ja Akrediteerimiskeskuse veebilehel avaldatavast standardisprogrammist.

EVS 846:2021

Hoone kanalisatsioon

Draining system inside buildings

See standard kehtib hoone kanalisatsioonile, mille kaudu reoveed suubuvad linna, asula ühiskanalisatsiooni. Hoone kanalisatsiooni all mõeldakse hoonesisest veeneeludega ühendatud kanalisatsionitorustikku koos võimalike lisaseadmetega (sulgeseadmed, pumplad, puhastusavad) kuni hoone välisseinani ja võimalike eelpuhastitega hoones. Hoone- ja väliskanalisatsiooni standardite piiritus on tähistatud (Joonis 1). Standardis ei käsitleta tulekustutuspaialgaldiste rakendamisel või katsetamisel tekkinud vee ärvoolu. Tuleohutuspaialgliste vee ärvoolu nõudeid (nt. tuletörjeliftid) kirjeldatakse standardis EVS 812-8. Käesolev standard ei käsitele drenaaži projekteerimist. Standardi nõudeid tuleb täita nii uue hoone kanalisatsiooni projekteerimisel, paigaldamisel, katsetamisel kui ka olemasolevate kanalisatsioonisüsteemide ümberehitamisel.

EVS 848:2021

Väliskanalisatsioonivõrk

Sewer systems outside buildings

See Eesti standard rakendub hoonevälistele kanalisatsioonivõrkudele, s.o hooneviimast/väljaväigust (hoone välisseinast) (EVS 846) või sademevee restkaevust kohani, kus kanalisatsioonivesi jõuab reoveepuhastisse või heitvee suublasse. Hoonealused torustikud kuuluvad kanalisatsioonivõrgu hulka siis, kui nad ei ole osa hoone kanalisatsioonisüsteemist. Standardis määratatakse kindlaks funktsionaalsed nõuded kanalisatsioonivõrgule seoses planeerimise, projekteerimise, ehitamise, käitamise, hoolduse ja ekspluatatsiooniga ning tegevused nõuete täitmiseks.

EVS-EN 1868:1999

Kukkumisvastased isikukaitsevahendid. Ekvivalentsete terminite loetelu

Personal protective equipment against falls from a height - List of equivalent terms

Seda Euroopa standardit kohaldatakse kukkumisvastastele isikukaitsevahenditele. Selles Euroopa standardis esitatakse kukkumiskaitse-vahendite kirjeldamiseks kasutatavate terminite loetelu. Terminid on esitatud tähestikulises järjekorras kolmes Euroopa Standardimiskomitee ametlikus keeles: inglise, prantsuse ja saksa keeles. Sulgedes esitatud terminid või selgitused on esitatud ainult arusaamise lihtsustamiseks.

EVS-EN IEC 61439-1:2021

Madalpingelised aparaadikoosted. Osa 1: Üldreeglid

Low-voltage switchgear and controlgear assemblies - Part 1: General rules (IEC 61439-1:2020)

See standardisarja IEC 61439 osa esitab madalpingeliste aparaadikoostete üldmääratlused ja kehtestab nende talitlustingimused, ehitusnõuded, tehnilised tunnusandmed ja kontrollinõuded. MÄRKUS Kogu selles dokumentis kasutatakse terminit kooste(d) (vt termin 3.1.1) üksnes madalpingelist(e) aparaadikooste(te) tähenedes. Kooste vastavuse töendamise eesmärgil rakendatakse standardisarja IEC 61439 asjakohase osa nõudeid alates osast 2 koots selle dokumenti viidatud nõuetega. Koostete kohta, mis ei ole hõlmatud osadega alates osast 3, rakendatakse osa 2. See dokument rakendub koostete kohta, kui see on nõutav üksnes asjakohase koostestandardiga, järgmiselt: — koosted, mille tunnus-vahelduvpinge ei ole üle 1000 V ega tunnus-alalispinge üle 1500 V; — koosted, mis on ette nähtud siseneva elektritoite või -toidete nimisagedusele mitte üle 1000 Hz; — koosted, mis on ette nähtud sise- või välisrakendusteks; — kohtkindlad või teisaldatavad, ümbrisega või ümbriseta koosted; — koosted, mis on ette nähtud kasutamiseks seoses elektrienergia genereerimise, edastamise, jaotamise ja muundamisega ning elektrienergia tarbimisseadmete juhtimisega. See dokument ei rakendu üksikseadmete ja iseseisvate komponentide kohta, nagu mootoriävitid, sulavkaitsmetega ühitatud lülitid, elektron-jõumuundursüsteemid ja -seadmed (power electronic converter systems and equipment, PECS), lülitimooduselised jõutoiteallikad (switch mode power supplies, SMPS), katkestusvabad toiteallikad (uninterruptable power supplies, UPS), põhijamisüsteemid (basic drive modules, BDM), komplektsed ajamisüsteemid (complete drive modules, CDM), reguleeritava kiirusega elektriajamisüsteemid (adjustable speed power drives systems, PDS) ja muud elektroonikaseadmed, mis vastavad oma asjakohastele tootestandarditele. See dokument kirjeldab seadiste ja iseseisvate komponentide sisseehitamist koostesse või koostet kujundavasse tühja ümbrisesse. Mõnedes rakendustes, mida iseloomustab näiteks plahvatusohtliku keskkonna olemasolu või funktsionaalse turvalisuse nõue, võib lisaks standardisarjas IEC 61439 sätestatule vaja olla täita muude standardite või seadusaktide nõudeid.

EVS-EN IEC 61439-2:2021

Madalpingelised aparaadikoosted. Osa 2: Jõuaparaadikoosted

Low-voltage switchgear and controlgear assemblies - Part 2: Power switchgear and controlgear assemblies (IEC 61439-2:2020)

See standardisarja IEC 61439 osa määratleb erinõuded jõu-lülitusaparaate ja juhtimisaparaate sisaldavatele koostetele (selle dokumenti ulatuses lühendatult jõuaparaadikoostetele, vt termin 3.1.101) järgmiselt: • koostetele, mille tunnuspinge ei ole vahelduvpoolu korral üle 1000 V ega alalispoolu korral üle 1500 V; • koostetele, mis on ette nähtud sisendtoite või -toidete nimisagedusele mitte üle 1000 Hz; MÄRKUS 1 Sagedust üle 1 kHz arvestatakse kõrgsagedusena (vt ka standardi IEC 60664-1:2007 jaotis 5.3.3.2.5), mis vajab isolatsiooni koordinatsiooni lisapiirangute arvesse võtmist. • koostetele, mis on ette nähtud sise- või välisrakendusteks; • kohtkindlatele või teisaldatavatele, ümbrisega või ümbriseta koostetele; • koostetele, mis on ette

nähtud kasutamiseks seoses elektrienergia genereerimise, edastamise, jaotamise ja muundamisega ning elektritarvitite juhtimisega ja kaasneva andmetöötusega; • koostetele, mis on projekteeritud kasutamiseks eritalitusoludes, nt laevadel või rõõbassöidukitel, kui on tagatud, et ka muud asjakohased erinõuded on tädetud. MÄRKUS 2 Laevade koostetele esitatavad lisanõuded on esitatud standardis IEC 60092-302-2. See dokument rakendub ka koostetele, mis on möeldud kasutamiseks fotoelektrilistes paigaldistest ja mida nimetatakse fotoelektrilisteks koosteteks (photovoltaic assemblies, PVA). Fotoelektriliste koostete eriomadused, eritalitusolud ja nõuded sisalduvad lisades DD, EE ja FF. See dokument näeb ette lisanõuded jõuaparaadikostetele, mis on ette nähtud kasutamiseks masinate elektriseadmete osana ja mis võivad rakenduda lisaks standardis IEC 60204-1 esitatud nõuetele. See dokument kehtib kõikidele koostetele, mida projekteeritakse, valmistatakse ja kontrollitakse üksikult või mis on täielikult standarditud ning mida toodetakse hulg. Koosteid võivad toota ja/või kokku panna peale esmatootja (vt standardi IEC 61439-1:2020 termin 3.10.1) ka teised juriidilised isikud. See dokument ei kehti üksikseadmete (näiteks kaitselüliti ja sulvakaitse-lülit-kombinatsioonide) ega iseseisvate komponentide (nagu näiteks mootorikäivitite, jõu-elektronmuundursüsteemide ja -seadmete (power electronic converter systems and equipment, PECS), lülitusmooduses toiteallikate (switch mode power supplies, SMPS), katkestusvabade toiteallikate (uninterruptable power supplies, UPS), põhi-ajamimoodulite (basic drive modules, BDM), komplektsete ajamimoodulite (complete drive modules, CDM), reguleeritava kiirusega jõuajamisüsteemide (power drives systems, PDS), autonoomsete (galvaanielementide patareidel ja kondensaatoritel põhinevate) energiasalvestussüsteemide) ja muude elektroonikaseadmete kohta, mis vastavad nende endi asjakohastele tootestandarditele. See dokument kirjeldab nende integreerimist jõuaparaadikostesse või tühja ümbrisesse, mida kasutatakse jõuaparaadikooste osana. Mõnedel rakendustel, nagu näiteks plahvatusohlikes keskkondades või funktsionaalse ohutuse tagamisel, võib tekkida vajadus täita lisas standardisarjas IEC 61439 sätestatule muude standardite või õigusaktide nõudeid. See dokument ei kehti erikoostete kohta, mida käsitlevad standardisarja IEC 61439 muud osad. Koostete kohta, mida standardisarja muudes osades ei käsitleta, kehtib see osa. Kui kohalik seadusandlus ei esita üksikasjalikke lisanõudeid, eeldatakse, et selle dokumendi käsituslasesse kuuluvad seadmed, mis vastavad sellele dokumendile, täidavad põhilisi ohutusnõudeid. Siia kuuluvad täielikult kontrollitud erivariandid, näiteks kasutajapoolse kaitse valik ohtlike pingestatud osade juhusliku puudutamise eest kaitseviiside IPXXB või IP3XD puhul. Kui kasutaja ja tootja vahel on kokku lepitud erinõuded, mis ei ole täielikult sätestatud selles dokumentis, näiteks kui (i) kooste osa on väljaspool selle dokumendi käsitusala, (ii) paigalduskohas on tegemist erakordse vibratsiooniga, (iii) talitluses võib tekkida erakordseid pingekökumisi või (iv) võivad tekkida heli- või ultraheliallike kahjulikud toimed, võib vaja olla nõuda riskihinnangut ja/või rakendada rangemaid või lisa-kontrollviise, et näidata põhiliste ohutusnõuete täidetust.

EVS-EN ISO 11202:2010+A1:2021

Akustika. Masinate ja seadmete müra. Töökoha ja muude määratud asukohtade helirõhutaseme määramine koos keskkonnaoludest tulenevate ligikaudsete korrektsoonide kohaldamisega

Acoustics - Noise emitted by machinery and equipment - Determination of emission sound pressure levels at a work station and at other specified positions applying approximate environmental corrections (ISO 11202:2010 + ISO 11202:2010/Amd 1:2020)

1.1 Üldist See rahvusvaheline standard määratleb meetodi masinate või seadmete tekitatava helirõhutaseme määramiseks töökohas ja muudes kindlaksmääratud kohtades, in situ. Töökoht, kus asub operaator, võib asuda välistingimustes, ruumis, kus mõõdetav müraallikas töötab, kabiinis, mis on kinnitatud mõõdetava müraallika külge, või mõõdetavast müraallikast eemal asuvas ruumis. Üks või mitu kindlaksmääratud mõõtmiskohta võivad asuda töökoha läheduses või uuritava või mõne muu seadme läheduses. Selliseid mõõtmiskohti nimetatakse ka kõrvalseisjate asukohaks. Tekkivad helirõhutasemed määratatakse A-kaalutud tasemetena. Lisaks saab vajaduse korral selle rahvusvahelise standardi kohaselt kindlaks määraata tasemed sagekusribades ja heli C-kaalutud maksimaalse helirõhutaseme. MÄRKUS 1 Standardisarjade ISO 11200 [15] kuni ISO 11205 [19] sisu on kokku võetud standardis ISO 11200 [15]. Esitatakse meetodid kohaliku keskkonnaparanduse määramiseks (kindlaksmääratud piirväärtuse kohaselt), mida rakendatakse mõõdetud helirõhutasemetele, et kõrvaldada peegeldavate pindade mõju, v.a tasapindi, millel müraallikas asub. See parandus põhineb mõõteruumi ekvivalentse heli needumisalal ja heli leviku karakteristikute (müraallika asukoht või leviku suund töökohas). Selles rahvusvahelises standardis täpsustatud meetodiga saadakse täpsusastme 2 (tehniline tase) või täpsusastme 3 (vaatlustase) tulemused. Parandusi rakendatakse taustmüra ja eespool kirjeldatud akustilise keskkonna iseloomustamiseks. Antakse juhiseid katsetatava müraallika paigaldamiseks ja kasutamiseks ning mikrofoni asukohtade valimiseks töökoha ja muude kindlaksmääratud mõõtekohade jaoks. Mõõtmiste üks eesmärk on võrrelda eri seadmegruppide toimivust määratletud keskkonnatingimustes ning standarditud paigaldus- ja töötigimustes. MÄRKUS 2 Saadud andmeid saab kasutada ka tekkiva müra helirõhutasemete deklareerimiseks ja kontrollimiseks standardi ISO 4871 [9] kohaselt. 1.2 Müra tüübide ja müraallikad Selles rahvusvahelises standardis määratletud meetod sobib igat tüüpi müra jaoks (püsiv, muutuv, kõikuv, isoleeritud impulssmüra jne), mis on määratletud standardis ISO 12001. Selles rahvusvahelises standardis määratletud meetod on rakendatav köigile müraallikatele tüübist ja suurusest olenemata. MÄRKUS Selles rahvusvahelises standardis kasutatakse sõnu „seade“ ja „mõõdetav müraallikas“ masina või seadme tähistamiseks. 1.3 Mõõtekeskkond Mõõtekeskkonna tüüp mõjutab tekkiva heli helirõhutaseme määramise täpsust. Seda rahvusvahelist standardit saab rakendada kõikides ruumides, kus saab kohaldada standardi nõudeid. Ruumi suhtes kehitavad nõuded on vähem ranged kui standardi ISO 11201 [16] nõuded, eriti nõuded keskkonna akustiliste omaduste kohta. 1.4 Töökoht ja muud määratud mõõtmiskohad See rahvusvaheline standard on kohaldatav töökohtades ja muudes määratud kohtades, kus tuleb määraata helirõhutase. Mõõtmisteks on sobivad järgmised kohad: a) töökoht, mis asub müraallika läheduses; see on koht, mida kasutatakse paljude tööstusseadmete ja kodumasinate mõõtmisel; b) kabiinis asuv töökoht, mis on mõõdetava müraallika lahutamatu osa; see on koht, mida kasutatakse paljude eri liikurmasinate mõõtmisel; c) osaliselt või täielikult suletud töökoht (või ekraaniga kaitstud koht), mille tootja tarnib müraallika lahutamatu osana; d) töökoht, mis on müraallikaga osaliselt või täielikult suletud – selline olukord võib ilmneda mõne suure tööstusseadme korral; e) kõrvalseisja töökohad, kus on isikud, kes ei tööta selle müraallikaga, kuid kes võivad vahetevahel või pidevalt asuda müraallika vahetus läheduses; f) muud määratud kohad, mis ei pruugi olla kellegi töökohad. Töökoht võib asuda ka operaatori määratud liikumisteel (vt jaotis 10.4).

EVS-EN ISO 17225-2:2021

Tahked biokütused. Kütuste spetsifikatsioonid ja klassid. Osa 2: Klassifitseeritud puitgraanulid Solid biofuels - Fuel specifications and classes - Part 2: Graded wood pellets (ISO 17225- 2:2021)

See dokument määrab kindlaks mittetööstuslikuks ja tööstuslikuks kasutamiseks mõeldud klassifitseeritud puitgraanulite kütuse kvaliteediklassid ja spetsifikatsioonid. Dokument hõlmab üksnes järgmistes toorainetest toodetud puitgraanuleid (vt ISO 17225-1:2021, tabel 1): — 1.1 Mets, istandikud ja muu töötlemata (esmane) puit; — 1.2 Puidutöötlemistööstuse kõrvalsaadused ja jäagid (jäätmehed); — 1.3.1 Keemiliselt töötlemata kasutatud puit. Selle dokumendi käsitlusallasse ei kuulu termiliselt töödeldud biomassi graanulid (nt rõstitud graanulid).

EVS-EN ISO 8849:2021

Väikelaeval. Elektrivooluga töötavad pilsipumbad Small craft - Electrically operated bilge pumps (ISO 8849:2020)

Selles dokumendis määratatakse kindlaks pilsivee kõrvaldamiseks ette nähtud elektriajamiga pilsipumpadele esitatavad nõuded. See kehtib järgmiste seadmete suhtes: — alalisvoolu pilsipumbad, mis töötavad nimipingega kuni 50 V, ja — ühefaasilised vahelduvvoolu pilsipumbad, mis töötavad nimipingega kuni 250 V. Seda ei kohaldata kahjustusohjeiks ette nähtud pumpadele.

EVS-ISO/IEC 19944-1:2021

Pilvtöötlus ja hajusplatvormid. Andmevoog, andmekategooriad ja andmete kasutamine. Osa 1: Alused Cloud computing and distributed platforms - Data flow, data categories and data use - Part 1: Fundamentals (ISO/IEC 19944-1:2020, identical)

See dokument — laiendab senist standardi ISO/IEC 17788 ja standardi ISO/IEC 17789 pilvtöötluse sõnavara ja etalonarhitektuuri, kirjeldamaks pilvteenuseid kasutavaid seadmeid sisaldavat ökosüsteemi; — kirjeldab seadmetes ja pilvtöötluse ökosüsteemis kulgevate andmete tüüpe; — kirjeldab ühendatud seadmete toimet pilvtöötluse ökosüsteemis kulgevatele andmetele; — kirjeldab andmevooge pilvteenust, pilvteenuseklientide ja pilvteenusekasutajate vahel; — esitab alusmõisteid, sealhulgas andmete taksonoomia, ning — piiritleb läbi pilvteenuseklientide seadmete ja pilvteenust kulgevate andmete kategooriad. See dokument on kohaldatav eeskirjana pilvteenusetarnijale, pilvteenuseklientidele ja pilvteenust kasutajaile, aga ka igale seadmete ja pilvteenuste vaheliste andmevoogude õiguslikes, poliitilistes, tehnilistes või muudes aspektides osalevatele isikutele.

STANDARDIPEALKIRJADE MUUTMINE

Selles jaotises avaldame infot Eesti standardite eesti- ja ingliskeelsete pealkirjade muutmise kohta ja ingliskeelsete pealkirjade tõlkimise kohta.

Lisainformatsioon või ettepanekud standardipealkirjade ebatäpsustest enquiry@evs.ee.

UUED HARMONEERITUD STANDARDID

Toote nõuetele vastavuse seaduse kohaselt avaldab Eesti Standardimis- ja Akrediteerimiskeskus oma veebilehel ja ametlikus väljaandes teavet harmoneeritud standardeid ülevõtva Eesti standardite kohta.

Harmoneeritud standardiks nimetatakse EL-i õigusaktide kontekstis Euroopa Komisjoni standardimisettepanku alusel Euroopa standardimisorganisatsioonide koostatud ja vastu võetud standardit.

Harmoneeritud standardite kasutamise korral eeldatakse enamiku vastavate õigusaktide mõistes, et standardi kohaselt valmistatud toode täidab õigusakti olulisi nõudeid ning on üldjuhul kõige lihtsam viis töendada õigusaktide oluliste nõuete täitmist. Harmoneeritud standardi täpne tähendus ja õiguslik staatus tuleneb siiski iga õigusakti tekstist eraldi ning võib õigusaktist olenevalt erineda.

Lisainfo:

<https://ec.europa.eu/growth/single-market/european-standards/harmonised-standards>

Eesti Standardimis- ja Akrediteerimiskeskus avaldab ametlikus väljaandes harmoneeritud standardeid ülevõtva Eesti standardite kohta järgmist infot:

- harmoneeritud standardi staatuse saanud Eesti standardid
- harmoneeritud standardi staatuses olevate Eesti standardite kohta avaldatud märkused ja hoiatused, mida tuleb standardite järgimisel arvestada
- harmoneeritud standardi staatuse kaotanud Eesti standardid

Info esitatakse vastavate õigusaktide kaupa.

Direktiiv 2009/48/EÜ Mänguasjade ohutus Komisjoni rakendusotsus (EL) 2021/867 (EL Teataja 2021/L 190/96)
