Medical devices - Symbols to be used with information to be supplied by the manufacturer -

Part 1: General requirements (ISO 15223-1:2021)

Selles dokumendis kirjeldatakse tingmärke, mida kasutatakse meditsiiniseadme kohta antud teabe väljendamiseks. See dokument on kohaldatav tingmärkidele, mida kasutatakse kogu maailmas saada olevate ja erinevate regulatiivsete nõuete järgimist vajavate meditsiiniseadmete laias valdkonnas. Neid tingmärke on võimalik kasutada kas meditsiiniseadmel endal, selle pakendil või kaasnevas infos. Selle dokumendi nõuded ei ole mõeldud kohaldamiseks muudes standardites kirjeldatud tingmärkidele.

Electronic fee collection - System architecture for vehicle-related tolling - Part 3: Data dictionary (ISO/TS 17573-3:2021)

This document defines the syntax and semantics in the field of electronic fee collection (EFC). The data types and assignment of values are provided in accordance with the abstract syntax notation one (ASN.1) technique, as specified in ISO/IEC 8824-1. In particular, this document defines: - ASN.1 (data) types within the fields of EFC and road user charging; - ASN.1 (data) types of a more general use that are used more specifically in standards related to EFC. This document does not seek to define ASN.1 (data) types that are primarily related to other fields that operate in conjunction with EFC, such as cooperative intelligent transport systems (C-ITS), the financial sector, etc.

EVS-EN ISO/IEC 17030:2021

Conformity assessment - General requirements for third-party marks of conformity (ISO/IEC 17030:2021)

This document provides general requirements for third-party marks of conformity, including their issue and use. This document covers third-party marks of conformity issued and used in different forms and various media including digital representation employing electronically stored and displayed marks, machine readable code, blockchain (distributed ledger) or other electronic means. NOTE 1 This document can also be used as guidance in using marks of conformity in other than third-party conformity assessment activity. NOTE 2 Third-party marks of conformity according to this document include symbols of recognition such as accreditation symbols. For consistency of terminology in this document they are referred to as accreditation marks. NOTE 3 Third-party marks of conformity according to this document can include logos (e.g. the sign of a conformity assessment body or trademarks), symbols (e.g. the representation of recognition in an accreditation agreement or the depiction of the applicable programme) or a combination thereof. NOTE 4 Third-party marks of conformity as a graphic representation of demonstrated conformity according to this document can be a combination of multiple marks (e.g. indications of compliance with several sets of specifications, codes for individually fulfilled specifications). NOTE 5 This document does not apply to markings, which provide indication of a designation, a code, or a classification only. Furthermore, it does not apply to graphic representations (e.g. of conformity assessment systems or schemes/programmes), logos (e.g. association of accreditation bodies and association of conformity assessment bodies). NOTE 6 third party mark of conformity are based on a conformity assessment scheme that include the function of surveillance.

Dentistry - Hydrocolloid impression materials (ISO 21563:2021)

This document specifies the requirements and test methods for hydrocolloid impression materials. This document helps to determine whether elastic aqueous agar and alginate hydrocolloid dental impression materials, as prepared for retail marketing, are of the quality needed for their intended purposes. It also specifies requirements for labelling and instructions for use. This document does not address possible biological hazards associated with the materials. Assessment of these hazards is addressed in ISO 7405 and the ISO 10993 series.

Dentistry - Endodontic obturating materials (ISO 6877:2021)

In this document are the specifications for the dimensional and compositional requirements for various endodontic obturating materials including preformed metal, preformed polymeric-coated metal, polymeric points, thermoplastic obturating material or combinations of the above suitable for use in the obturation of the root canal system. This document also specifies numerical systems and a color-coding system for designating the sizes. This document does not include materials for support of a coronal restoration. Dental endodontic obturating points are marketed sterilized or non-sterilized. This International Standard covers the physical attributes expected of such products as supplied. Requirements for sterility are not included, and any claim that the product is sterile is the — responsibility of the manufacturer (see Table 3). Article 7 specifies the requirements for — packaging and labelling, including the instructions for use. This International Standard does not apply to instruments or equipment used in conjunction with thermoplastic obturating materials (obturating material that deform with heat).

EVS-EN 16980-1:2021

Photocatalysis - Continuous flow test methods - Part 1: Determination of the degradation of nitric oxide (NO) in the air by photocatalytic materials

This document specifies a method for assessing the performance of photocatalytic inorganic materials contained in cement mortars and/or limes or ceramic-based matrices, paints or materials deposited as thin films or coatings on a variety of substrates for the photocatalytic abatement of nitric oxide in the gas phase. This method does not apply to the assessment of samples to be applied with flow perpendicular to the surface or flow permeating the surface itself as polymeric and paper filters, honeycomb structures and suchlike. The performance for the photocatalytic sample under test is evaluated by measuring the degradation rate of nitric oxide (NO) using the method specified herein. The photocatalytic abatement rate is calculated from the observed rate by eliminating the effects of mass transfer. The intrinsic photocatalytic abatement rate is an intrinsic property of the material tested and makes it possible to distinguish the photocatalytic activities of various products with an absolute scale defined with physical and engineering meaning. For the measurements and calculations described in this document the concentration of nitrogen oxides (NOx) is defined as the stoichiometric sum of nitric oxide (NO) and nitrogen dioxide (NO₂).

Plastics - Controlled loop recycling of PVC-U profiles from windows and doors

This document specifies the controlled loop and the definition of those material transformation steps which are relevant for product quality, in particular recycling input and output and profile manufacturing input and output. Traceability tools are specified to characterize this loop as a controlled loop. This document references existing quality and test methodologies for recycled PVC to be used in PVC-U profiles for windows and doors. This document establishes the controlled loop treatment of PVC profiles in line with the general understanding of life cycles as outlined in EN 15804. NOTE 1 With regard to PVC waste treatment, the present document relates to existing standards EN 15343, EN 15346 and EN 15347. NOTE 2 With regard to semifinished and/or finished products, it refers to the European Standard PVC-U window profiles (see EN 12608-1) and to the European Standards for windows and doors (see EN 14351-1, EN 14351-2 and EN 16034).

Requirements for the provision of secure remote services for fire safety systems and security systems

This document specifies the minimum requirements for the provision of secure remote services via a remote access infrastructure (RAI) carried out either at site or off-site (e.g. via IP connections) to the following systems: a) fire safety systems including, but not limited to, fire detection and fire alarm systems, fixed firefighting systems, smoke and heat control systems; b) security systems including, but not limited to, intruder and hold-up alarm systems, electronic access control systems, external perimeter security systems and video surveillance systems; c) social alarm systems; d) emergency sound systems; e) a combination of such systems; f) management systems connected to systems a) – e). This document does not cover: a) at site services without using remote connection; b) the monitoring and alarm receiving services by the MARC, which are described in the EN 50518.

EVS-EN IEC 60695-6-1:2021

Fire hazard testing - Part 6-1: Smoke obscuration - General guidance

IEC 60695-6-1:2021 gives guidance on: a) the optical measurement of obscuration of smoke; b) general aspects of optical smoke test methods; c) consideration of test methods; d) expression of smoke test data; e) the relevance of optical smoke data to hazard assessment. This basic safety publication focusing on safety guidance is primarily intended for use by technical committees in the preparation of safety publications in accordance with the principles laid down in IEC Guide 104 and ISO/IEC Guide 51. One of the responsibilities of a technical committee is, wherever applicable, to make use of basic safety publications in the preparation of its publications. This third edition cancels and replaces the second edition of IEC 60695-6-1 published in 2005 and Amendment 1:2010. It constitutes a technical revision. This edition includes the following significant technical changes with respect to the previous edition: - References to IEC TS 60695-6-30 (withdrawn in 2016) have been removed. - References to IEC TS 60695-6-31 (withdrawn in 2016) have been removed. - References to ISO 5659-2 have been inserted. - The scope contains some additional text. - Terms and definitions have been updated. - Subclause 3.2 has been updated. - Subclause 7.1 has been updated. It has the status of a basic safety publication in accordance with IEC Guide 104 and ISO/IEC Guide 51. This International Standard is to be used in conjunction with IEC 60695-6-2.

Water quality - Sampling - Part 10: Guidance on sampling of waste water (ISO 5667-10:2020)

See dokument esitab olme- ja tööstusreovee proovivõtu põhimõtted, st proovivõtuplaani koostamine ja proovivõtumeetodid. See dokument hõlmab reovett kõikides vormides, st tööstusreovesi, radioaktiivne reovesi, jahutusvesi, toor- ja puhasatud olmereovesi. Selles dokumendis käsitletakse erinevaid kasutatavaid proovivõtumeetodeid ja rakendatavaid reegleid, et tagada proovide esinduslikkus. Dokument ei hõlma proovivõttu õnnetusjuhtumite ja avariide korral, kuid teatud juhtudel võib kohaldada selles dokumendis kirjeldatud proovivõtumeetodeid.

17 METROLOOGIA JA MÕÖTMINE. FÜÜSIKALISED NÄHTUSED

EVS-EN ISO 10360-10:2021

Geometrical product specifications (GPS) - Acceptance and reverification tests for coordinate measuring systems (CMS) - Part 10: Laser trackers (ISO 10360-10:2021)

This document specifies the acceptance tests for verifying the performance of a laser tracker by measuring calibrated test lengths, according to the specifications of the manufacturer. It also specifies the reverification tests that enable the user to periodically reverify the performance of the laser tracker. The acceptance and reverification tests given in this document are applicable to laser trackers utilizing a retroreflector, or a retroreflector in combination with a stylus or optical distance sensor, as a probing system. Laser trackers that use interferometric measurement (IFM), absolute distance measurement (ADM) or both

can be verified using this document. This document can also be used to specify and verify the relevant performance tests of other spherical coordinate measurement systems that use cooperative targets, such as "laser radar" systems. NOTE Systems which do not track the target, such as laser radar systems, will not be tested for probing performance. This document does not explicitly apply to measuring systems that do not use a spherical coordinate system. However, interested parties can apply this document to such systems by mutual agreement. This document specifies: - performance requirements that can be assigned by the manufacturer or the user of the laser tracker; - the manner of execution of the acceptance and reverification tests to demonstrate the stated requirements; - rules for proving conformity; - applications for which the acceptance and reverification tests can be used.

EVS-EN ISO 10360-13:2021

Geometrical product specifications (GPS) - Acceptance and reverification tests for coordinate measuring systems (CMS) - Part 13: Optical 3D CMS (ISO 10360-13:2021)

This part of ISO 10360 specifies the acceptance tests for verifying the performance of an optical CMS (coordinate measuring system) when measuring lengths as stated by the manufacturer. It also specifies the reverification tests that enable the user to periodically reverify the performance of the optical 3D CMS. An optical 3D CMS that this standard intends to specify is a contactless area measuring sensor delivering 3D surface data in several individual single views by an optical measuring principle and transforming it into a common coordinate system. Typical optical measuring principles are pattern projection, fringe projection, and project-and-sweep a scanned line, or similar, delivering single views without assistance of external information related to position and orientation between CMS and objects to be scanned. Typical registration principle is based on a best fitting of commonly captured position information across at least two different single views either or both by using reference targets or surface features of objects to be scanned.

EVS-EN 50632-2-5:2016/A1:2021

Electric motor-operated tools - Dust measurement procedure - Part 2-5: Particular requirements for circular saws

This European Standard specifies general requirements for the dust measurement of electric motor-operated tools supplied from mains or from batteries. This European Standard applies to those tools with and without dust extraction unit where dust such as mineral dust containing silica or wood dust is expected. This part of EN 50632 sets particular requirements for circular saws.

Metallide sulakeevituse kvaliteedinõuded. Osa 1: Sobiva kvaliteedinõuete taseme valiku kriteeriumid

Quality requirements for fusion welding of metallic materials - Part 1: Criteria for the selection of the appropriate level of quality requirements (ISO 3834-1:2021)

See dokument määratleb ISO 3834 standardisarja üldkirjelduse ja kriteeriumid, mida tuleb arvesse võtta asjakohase metallide sulakeevituse kvaliteedinõuete taseme valikul kolme taseme vahel, mis on määratletud standardites ISO 3834-2, ISO 3834-3 ja ISO 3834-4. Standardit saab rakendada tootmisel nii töökojatingimustes kui ka ehitusplatsidel. See dokument ei määratle nõudeid täielikule kvalitedijuhtimissüsteemile (QMS). Siiski identifitseerib peatükki 6 kvalitedijuhtimissüsteemi elemendid, mille lisamine täiendab ISO 3834 standardisarja.

27 ELEKTRI- JA SOJUSENERGEETIKA

EVS-EN IEC 60987:2021

Nuclear power plants - Instrumentation and control important to safety - Hardware requirements

IEC 60987:2021 provides requirements and recommendations for the hardware aspects of I&C systems whatever the technology and applies for all safety classes in a graded manner (as defined by IEC 61513). The requirements defined within this document guide, in particular, the selection of pre-existing components, hardware aspects of system detailed design and implementation and equipment manufacturing. This third edition cancels and replaces the second edition published in 2007. This edition includes the following significant technical changes with respect to the previous edition: a) Title modified; b) Take account of the fact that hardware requirements apply to all I&C technologies, including conventional hardwired equipment, programmable digital equipment or by using a combination of both types of equipment; c) Align the standard with the new revisions of IAEA documents SSR-2/1, which include as far as possible an adaptation of the definitions; d) Replace, as far as possible, the requirements associated with standards published since the edition 2.1, especially IEC 61513, IEC 60880, IEC 62138, IEC 62566 and IEC 62566-2; e) Review the existing requirements and update the terminology and definitions; f) Extend the scope of the standard to all hardware (computerized and non-computerized) and to all safety classes 1, 2 and 3; g) Complete, update the IEC and IAEA references and vocabulary; h) Check possible impact of other IAEA requirements and recommendations considering extension of the scope of SC 45A; i) Highlight the use of IEC 62566 and IEC 62566-2 for HPD development; j) Introduce specific activities for pre-existing items (selection, acceptability and/or mitigation); k) Introduce clearer requirements for electronic module-level design, manufacturing and control; l) Complete reliability assessment methods; m) Introduce requirements when using automated tests or control activities; n) Complete description of manufacturing control activities (control process, assessment of manufactured equipment, preservation of products); o) Define and ensure the inclusion of a graded approach for dealing with the 3 different classes of equipment and related requirements.

Measuring relays and protection equipment - Part 187-1: Functional requirements for differential protection - Restrained and unrestrained differential protection of motors, generators and transformers

IEC 60255-187-1:2021 specifies the minimum requirements for functional and performance evaluation of (longitudinal) differential protection designed for the detection of faults in ac motors, generators and transformers. This document also defines how to document and publish performance test results. This document defines the influencing factors that affect the accuracy under steady state conditions and performance characteristics during dynamic conditions. The test methodologies for verifying performance characteristics and accuracy are also included in this document. This document, together with IEC 60255-187-2 and IEC 60255-187-3, cancels and replaces IEC 60255-13. This document includes the following significant technical changes with respect to IEC 60255-13: a) IEC 60255-13 has been significantly revised to follow the common structure of the functional standards for protection relays (IEC 60255-1xx series). IEC 60255-187-1 has been developed to address the restrained and unrestrained differential protection of motors, generators and transformers. The revisions include detailed description of the functions including the performance specification, testing and documentation requirements.

Overhead line structures - Loading tests

IEC 60652:2021 specifies the methods and procedures of testing supports for overhead lines. It applies to the testing of supports and structures of overhead lines. There is no restriction on the type of material used in the fabrication of the supports which may include, but not be limited to, metallic alloys, concrete, timber, laminated wood and composite materials. If required by the client, this document can also be applied to the testing of telecommunication supports, railway/tramway overhead electrification supports, electrical substation gantries, street lighting columns, wind turbine towers, ski-lift supports, etc. Tests on reduced scale models of supports are not covered by this document. This third edition cancels and replaces the second edition published in 2002. This edition constitutes a technical revision. This edition includes the following significant technical changes with respect to the previous edition: a) Title modified; b) Added reference to CIGRE Brochure 399; c) In Clause 7, added test limitation for wind speed and direction during testing; d) In paragraph 10.5, added load increments for destruction tests; e) In paragraph 10.7, added a requirement for an agreement between client and testing station when testing supports made of creep-sensitive materials; f) In Clause 17, added requirements for sampling procedure to be provided in the test report.

High-voltage switchgear and controlgear - Part 101: Synthetic testing

IEC 62271-101:2021 mainly applies to AC circuit-breakers within the scope of IEC 62271-100. It provides the general rules for testing AC circuit-breakers, for making and breaking capacities over the range of test duties described in 7.102 to 7.111 of IEC 62271-100:2021, by synthetic methods. It has been proven that synthetic testing is an economical and technically correct way to test high-voltage AC circuit-breakers according to the requirements of IEC 62271-100 and that it is equivalent to direct testing. The methods and techniques described are those in general use. The purpose of this document is to establish criteria for synthetic testing and for the proper evaluation of results. Such criteria will establish the validity of the test method without imposing restraints on innovation of test circuitry. This third edition cancels and replaces the second edition published in 2012 and Amendment 1:2017. This edition constitutes a technical revision. This edition includes the following significant technical changes with respect to the second edition: a) alignment with the third edition of IEC 62271-100:2021; b) update this document with the last methods and techniques used for synthetic tests.

Sissejuhatus ja üldised nõuded versioon 15

IMT cellular networks; Harmonised Standard for access to radio spectrum; Part 1: Introduction and common requirements Release 15

The present document applies to user equipment, repeaters and base stations for IMT, falling within the scope of one of the other parts of ETSI EN 301 908, except for IMT-2000 FDMA/TDMA (DECT). The present document also covers the corresponding ancillary equipment. NOTE 1: ETSI EN 301 908-10 contains in particular requirements for radiated spurious emissions and control and monitoring functions applicable to IMT-2000 FDMA/TDMA (DECT) equipment. The present document includes technical requirements which are common to equipment falling within the scope of several of the other parts. It should be used in conjunction with at least another part of ETSI EN 301 908. NOTE 2: The other parts of ETSI EN 301 908, which are listed in the foreword of the present document, specify technical requirements in respect of a particular type of IMT equipment. NOTE 3: Recommendations ITU-R M.1457-15, M.2012-4 and M.2150.0 define the characteristics of the members of the IMT-2000 family and IMT-Advanced respectively by means of references to technical specifications developed by Standards Development organizations. The present document applies to equipment designed to meet any version of the terrestrial specifications referenced in Recommendations ITU-R M.1457-15 and M.2012-4. The present document contains requirements to demonstrate that radio equipment both effectively uses and supports the efficient use of radio spectrum in order to avoid harmful interference. NOTE 4: The relationship between the present document and essential requirements of article 3.2 of Directive 2014/53/EU is given in annex A.

IMT cellular networks; Harmonised Standard for access to radio spectrum; Part 14: Evolved Universal Terrestrial Radio Access (E-UTRA) Base Stations (BS) Release 15

The present document specifies technical characteristics and methods of measurements for the types of equipment: 1) Base Station for Evolved Universal Terrestrial Radio Access (E-UTRA). 2) Base Station for Evolved Universal Terrestrial Radio Access (E-UTRA) with NB-IoT. 3) Base Station for NB-IoT standalone. This radio equipment type is capable of operating in all or any part of the operating bands given in table 1-1. Unless stated otherwise, requirements specified for the TDD duplex mode apply for downlink and uplink operations in Frame Structure Type 2. NB-IoT is designed to operate in the E-UTRA operating bands 1, 3, 8, 20, 28, 31, 41, 42, 43, 65, 72, 87, 88 which are defined in table 1-1. The present document covers conducted requirements for E-UTRA Base Stations for 3GPP Release 8, 9, 10, 11, 12, 13, 14 and 15. Additionally, it includes the requirements for E-UTRA Base Station operating bands and E-UTRA CA operating bands from 3GPP Release 16. NOTE: The relationship between the present document and essential requirements of article 3.2 of Directive 2014/53/EU is given in annex A.

Süsteemid mobiilsidele lennuki pardal (MCOBA); Raadiospektrile juurdepääsu harmoneeritud standard

Mobile Communication On Board Aircraft (MCOBA) systems; Harmonised Standard for access to radio spectrum

The present document specifies technical characteristics and methods of measurements for the following equipment types (which are parts of a Mobile Communication On Board Aircraft system): 1) The Onboard Base Transceiver Station (OBTS) supporting GSM and/or UMTS, and/or LTE communication protocols including specific functions for restricting the transmit power of the MSs or UEs, associated with the OBTS. 2) The Network Control Unit (NCU) preventing direct connection of the onboard mobile terminals with mobile networks on the ground by raising the noise floor in the cabin. The OBTSs are capable of operating in all or any part of the frequency bands given in table 1-1. Table 1-1: Base Station operating bands Band designation; Direction of transmission Base Station operating bands UTRA I; BS Transmit 2 110 MHz to 2 170 MHz (UMTS); BS Receive 1 920 MHz to 1 980 MHz (UMTS) E-UTRA 3; BS Transmit 1 805 MHz to 1 880 MHz (LTE); BS Receive 1 710 MHz to 1 785 MHz (LTE) DCS 1800; BS Transmit 1 805 MHz to 1 880 MHz (GSM); BS Receive 1 710 MHz to 1 785 MHz (GSM) The NCU is capable of operating in all of the frequency bands given in table 1-2. Table 1-2: NCU operating bands NCU operating bands; Comment 460 MHz to 470 MHz (see note) 791 MHz to 821 MHz (see note); LTE 925 MHz to 960; MHz GSM 1 805 MHz to 1 880 MHz (see note); GSM/LTE 2 110 MHz to 2 170 MHz; UMTS 2 570 MHz to 2 620 MHz (see note); LTE 2 620 MHz to 2 690 MHz (see note); LTE NOTE: Implementation of this operating band in a NCU is not mandatory according to the EC Decision 2016/2317/EU. The present document applies only to radio equipment using a dedicated transmitting antenna that is designed as an indispensable part of the system for usage on board an aircraft. It applies to equipment for continuous and discontinuous transmission of data and digital speech. Within the European Union, the system covered by the present document operates in accordance with the operational requirements as outlined in the Commission Decision 2016/2317/EU based on the former Decision 2013/654. In relation to the NCU, some frequency bands are now optional while they were mandatory before. Due to this difference the present document had to be reviewed. The present document contains requirements to ensure that such Radio equipment both effectively uses and supports the efficient use of radio spectrum in order to avoid harmful interference. In addition to the present document, other ENs that specify technical requirements in respect of essential requirements under other parts of article 3 of the Radio Equipment Directive may apply to equipment within the scope of the present document. The present document does not cover equipment compliance with relevant civil aviation regulations. In this respect, a MCOBA system, for its installation and operation on board an aircraft is subject to additional national or international civil aviation airworthiness certification requirements, for example to EUROCAE ED-14G. NOTE: The relationship between the present document and essential requirements of article 3.2 of Directive 2014/53/EU is given in annex A

Metallic cables and other passive components test methods - Part 4-15: Electromagnetic compatibility (EMC) - Test method for measuring transfer impedance and screening attenuation - or coupling attenuation with triaxial cell

IEC 62153-4-15:2021 specifies the procedures for measuring with triaxial cell the transfer impedance, screening attenuation or the coupling attenuation of connectors, cable assemblies and components, for example accessories for analogue and digital transmission systems, and equipment for communication networks and cabling. This second edition cancels and replaces the first edition published in 2015. This edition includes the following significant technical changes with respect to the previous edition: a) measurement of coupling attenuation of balanced connectors, assemblies and components with balun and balunless added; b) application of a test adapter was added; c) application of a moveable shorting plane; d) application of the triaxial "absorber" cell; e) correction of test results in the case that the receiver input impedance R is higher than the characteristic impedance of the outer circuit Z2.

Electronic fee collection - System architecture for vehicle-related tolling - Part 3: Data dictionary (ISO/TS 17573-3:2021)

This document defines the syntax and semantics in the field of electronic fee collection (EFC). The data types and assignment of values are provided in accordance with the abstract syntax notation one (ASN.1) technique, as specified in ISO/IEC 8824-1. In particular, this document defines: - ASN.1 (data) types within the fields of EFC and road user charging; - ASN.1 (data) types of a more general use that are used more specifically in standards related to EFC. This document does not seek to define ASN.1 (data) types that are primarily related to other fields that operate in conjunction with EFC, such as cooperative intelligent transport systems (C-ITS), the financial sector, etc.

BIM-i rakenduskavade (BEP) ja infovahetuse nõuete (EIR) Euroopa tasandil juurutamise juhend standardite EN ISO 19650-1 ja -2 põhjal

Guideline for the implementation of BIM Execution Plans (BEP) and Exchange Information Requirements (EIR) on European level based on EN ISO 19650-1 and -2

Selles juhendis käsitletakse protsesse, mis on seotud info hankimise ja edastamisega projekteerimise ja ehitusprojektide tarbeks, täpsemalt lähteülesannet kirjeldavat dokumenti (EIR) ja BIM-i rakenduskava (BEP), võttes arvesse haldusprotsesse. Selles juhendis arvestatakse rahvusvaheliste standardite ja kirjelduste ning soovituslike praktikatega. See dokument on mõeldud kõigile esitatavate infotulemitate kätesaadavaks tegemisega seotud osalistele. Sealhulgas nii neile, kes infot vajavad, kui ka neile, kes infot esitavad. Nõutav info võib puudutada kõiki elutsükli protsesse, nagu projekteerimine, ehitus, käitamine ja hooldus ning elutsükli lõpu protsessid. See kehtib eelkõige nt kliendile, vara omanikule/käitajale, arhitektile, insenerile, ehitajale, alltöövõtjatele jne. Juhendis kirjeldatakse tellijatele metoodikat, kuidas nõuda ja kokku leppida infovajaduse õige hulk, kvaliteet ja tase. Samuti on oluline, et täitjad saaksid hinnata olemasolevate EIR-ide kvaliteeti ning tuvastada võimalikke ülekirjeldusi või lünlük. Selle alusel on võimalik prognosida ja arvutada andmete koostamiseks vajalikku ressurssi. Selles dokumentis operatsionaliseeritakse infotulemitate määramise ja kokkuleppimise protsess standardi EN ISO 19650-2:2018 järgi. See aruanne ei hõlma kõiki standardi EN ISO 19650-2:2018 jaotisi. Selle peamine eesmärk on anda näidismalle ja juhiseid kõigiks tegevusteks, mille käigus kirjeldatakse infovahetuse nõuete ja BIM-i rakenduskava koostamise nõudeid ja tulemeid. Täpsemalt hõlmab see standardi EN ISO 19650-2:2018 jaotiste 5.2.1 (EIR), 5.3.2 (määramiseelne BEP) ja 5.4.1 (kinnitatud BEP) kohustuslike ja soovituslike nõudeid. Käsitlusala ja selle piiride määratlemiseks vt tabel 1 (vt lisa A, millistele standardi EN ISO 19650-2:2018 osadele on olemas mallid).

Road Vehicles - Portable Emission Measuring Systems (PEMS) - Performance Assessment

This document defines the procedures for assessing the performance of test equipment that is used for the on-road measurement of tailpipe emissions of light-duty vehicles, on the basis of a common test procedure that simulates the range of conditions experienced during on-road tests. This document prescribes: - the tests to be conducted, and, - a procedure to determine, for any type of PEMS equipment, an appropriate uncertainty margin to reflect its performance over those conditions. The key test variables are as follows (but not limited to the ones mentioned): a) temperature, humidity and pressure and step-wise or gradual changes, b) acceleration and deceleration (longitudinal and lateral), c) vibration, inclination and shock tests, d) instrument positioning on a vehicle, e) combinations of (1) to (4), f) cross-interferences, g) signal-processing, data treatment and time alignment, and h) calculation methods (excluding the regulatory post-processing of data).

EVS-EN ISO 3381:2021

Raudteealased rakendused. Akustika. Raudteeveeremi sisemüra möötmine Railway applications - Acoustics - Noise measurement inside railbound vehicles (ISO 3381:2021)

This document specifies the measurement method and conditions to obtain reproducible and comparable noise levels on-board all kinds of vehicles operating on rails or other types of fixed track, hereinafter conventionally called "unit", except for track maintenance vehicles in working modes. NOTE For constant speed tests the concept of "comparability" needs further caution, as this term is used as well to classify the measurement precision grade related to track roughness and track decay rates given in this document. Nevertheless, the measurement may be acceptable as type test on a track of controlled acoustic quality, but not compliant to the track specification given in this document. This document is applicable to type testing. It does not include all the instructions to carry out monitoring testing or evaluation of noise exposure of passengers or drivers over a whole journey. This document is not applicable to guided buses. It provides measurement procedures for vehicle interior noise: — when the vehicle is moving at constant speed; — when the vehicle is stationary; — when the vehicle is accelerating or decelerating; — in the driver's cab when an external warning horn is sounding. NOTE In general, a vehicle type acceptance test would require only a selected subset of these tests to be performed. It does not provide measurement procedures for: — audibility or intelligibility of any audible signals; — assessment of warning devices other than warning horns. The assessment of noise exposure of train crew due to operational conditions is not in the scope of this document. The results may be used, for example: — to characterise the noise inside these units; — to compare the internal noise of various units on a particular track section; — to collect basic source data for units. The test procedures specified in this document are of engineering grade (grade 2), that is the preferred one for noise declaration purposes, as defined in EN ISO 12001. If test conditions are relaxed for example as done for monitoring of in-service trains, then the results are no longer of engineering grade. The procedures specified for accelerating and decelerating tests are of survey grade.

Sensory analysis - Methodology - Guidelines for the measurement of the performance of a quantitative descriptive sensory panel (ISO 11132:2021)

This International Standard gives guidelines for monitoring and assessing the overall performance of a quantitative descriptive panel and the performance of each member. A panel of assessors can be used as an instrument to identify products' sensory attributes and to assess the magnitude of sensory attributes. Performance is the measure of the ability of a panel or an assessor to make reliable and valid attribute assessments across the products being evaluated. It can be monitored at a given time point or tracked over time. Performance comprises the ability of a panel to detect, identify, and measure an attribute, use attributes in a similar way to other panels or between assessors within a panel, discriminate between stimuli, use a scale properly, repeat their own results, and reproduce results in comparison to other panels or assessors. The methods specified allow to monitor and assess the consistency, repeatability, freedom from bias and the ability of discrimination of panels and assessors. Monitoring and assessment can be carried out in one session or over time. Monitoring performance data enables the panel leader to improve panel and assessor performance, to identify issues and retraining needs or to identify assessors who are not performing well enough to continue participating. The methods specified in this International Standard can be used, in

full or a selection only, by the panel leader to appraise continuously the performance of panels or individual assessors. The methods listed are not exhaustive and other appropriate methods may also be used. This International Standard applies to individuals or panels in training as well as for established panels.

Surface Active Agents - Bio-based surfactants - Requirements and test methods

This document sets requirements for bio-based surfactants in terms of properties, limits, application classes and test methods. It lays down the characteristics and details for assessment of bio-based surfactants as to whether they: - are fit for purpose in terms of performance related properties; - comply with the requirements regarding the health, safety and environment which apply to general surfactants; - are derived from a certain minimum percentage of biomass; - comply with at least similar sustainability criteria as comparable (non-bio-based) surfactants. The criteria of the regulation on Registration, Evaluation, Authorization and Restriction of Chemicals (REACH) [13] also apply to bio-based surfactants. NOTE EN 16575 defines the term "bio-based" as derived from biomass and clarifies that "bio-based" does not imply "biodegradable". In addition, "biodegradable" does not necessarily imply the use of "bio-based" material.

CEN ISO/TR 10400:2021

Petroleum and natural gas industries - Formulae and calculations for the properties of casing, tubing, drill pipe and line pipe used as casing or tubing (ISO/TR 10400:2018)

This document illustrates the formulae and templates necessary to calculate the various pipe properties given in International Standards, including — pipe performance properties, such as axial strength, internal pressure resistance and collapse resistance, — minimum physical properties, — product assembly force (torque), — product test pressures, — critical product dimensions related to testing criteria, — critical dimensions of testing equipment, and — critical dimensions of test samples. For formulae related to performance properties, extensive background information is also provided regarding their development and use. Formulae presented here are intended for use with pipe manufactured in accordance with ISO 11960 or API 5CT, ISO 11961 or API 5D, and ISO 3183 or API 5L, as applicable. These formulae and templates can be extended to other pipe with due caution. Pipe cold-worked during production is included in the scope of this document (e.g. cold rotary straightened pipe). Pipe modified by cold working after production, such as expandable tubulars and coiled tubing, is beyond the scope of this document. Application of performance property formulae in this document to line pipe and other pipe is restricted to their use as casing/tubing in a well or laboratory test, and requires due caution to match the heat-treat process, straightening process, yield strength, etc., with the closest appropriate casing/tubing product. Similar caution is exercised when using the performance formulae for drill pipe. This document and the formulae contained herein relate the input pipe manufacturing parameters in ISO 11960 or API 5CT, ISO 11961 or API 5D, and ISO 3183 or API 5L to expected pipe performance. The design formulae in this document are not to be understood as a manufacturing warranty. Manufacturers are typically licensed to produce tubular products in accordance with manufacturing specifications which control the dimensions and physical properties of their product. Design formulae, on the other hand, are a reference point for users to characterize tubular performance and begin their own well design or research of pipe input properties. This document is not a design code. It only provides formulae and templates for calculating the properties of tubulars intended for use in downhole applications. This document does not provide any guidance about loads that can be encountered by tubulars or about safety margins needed for acceptable design. Users are responsible for defining appropriate design loads and selecting adequate safety factors to develop safe and efficient designs. The design loads and safety factors will likely be selected based on historical practice, local regulatory requirements, and specific well conditions. All formulae and listed values for performance properties in this document assume a benign environment and material properties conforming to ISO 11960 or API 5CT, ISO 11961 or API 5D and ISO 3183 or API 5L. Other environments can require additional analyses, such as that outlined in Annex D. Pipe performance properties under dynamic loads and pipe connection sealing resistance are excluded from the scope of this document. Throughout this document tensile stresses are positive.

Cold rolled narrow steel strip for heat treatment - Technical delivery conditions

This document specifies the technical delivery conditions for cold rolled narrow steel strip made of non alloy and alloy steel grades in the form of coils and cut lengths in rolling widths less than 600 mm. Cold rolled narrow steel strip is available in grades of case hardening steel and of steels for quenching and tempering for general and special applications particularly springs. - Case hardening steels in thicknesses up to and including 10 mm; - steels for quenching and tempering in thicknesses up to and including 6 mm in the conditions annealed (+A), annealed and skin passed (+LC) or cold rolled (+CR); - steels in the quenched and tempered condition (+QT) in thicknesses between 0,30 mm and 3,00 mm. In special cases supplementary requirements or deviations with respect to this document can be agreed between the purchaser and the supplier at the time of enquiry and order (see 5.2 and Annex A). In addition to the requirements of this document, the general technical delivery requirements specified in EN 10021 apply. This document does not cover cold rolled flat products for which separate standards exist, e.g.: - cold rolled uncoated low carbon steel narrow strip for cold forming (EN 10139); - cold rolled steel flat products with higher yield strength for cold forming (EN 10268).

Plastics - Controlled loop recycling of PVC-U profiles from windows and doors

This document specifies the controlled loop and the definition of those material transformation steps which are relevant for product quality, in particular recycling input and output and profile manufacturing input and output. Traceability tools are specified to characterize this loop as a controlled loop. This document references existing quality and test methodologies for recycled PVC to be used in PVC-U profiles for windows and doors. This document establishes the controlled loop treatment of PVC profiles in line with the general understanding of life cycles as outlined in EN 15804. NOTE 1 With regard to PVC waste treatment, the present document relates to existing standards EN 15343, EN 15346 and EN 15347. NOTE 2 With regard to semi-finished and/or finished products, it refers to the European Standard PVC-U window profiles (see EN 12608-1) and to the European Standards for windows and doors (see EN 14351-1, EN 14351-2 and EN 16034).

Tissue paper and tissue products - Part 7: Determination of optical properties - Measurement of brightness and colour with D65/10° (outdoor daylight) (ISO 12625-7:2021)

This document specifies testing procedures for the instrumental determination of brightness and colour of tissue paper and tissue products viewed under outdoor daylight conditions. It also gives specific instructions for the preparation of test pieces (single-ply, multi-ply products) and for the optical measurements of products, where special precautions can be necessary. NOTE The properties called ISO brightness and colour with C/2° (indoor daylight) are measured with an instrument adjusted to a much lower UV content than that specified in this document. The measurements of ISO brightness and colour with C/2° (indoor daylight) are described in ISO 12625-15.

EVS-EN 16980-1:2021

Photocatalysis - Continuous flow test methods - Part 1: Determination of the degradation of nitric oxide (NO) in the air by photocatalytic materials

This document specifies a method for assessing the performance of photocatalytic inorganic materials contained in cement mortars and/or limes or ceramic-based matrices, paints or materials deposited as thin films or coatings on a variety of substrates for the photocatalytic abatement of nitric oxide in the gas phase. This method does not apply to the assessment of

samples to be applied with flow perpendicular to the surface or flow permeating the surface itself as polymeric and paper filters, honeycomb structures and suchlike. The performance for the photocatalytic sample under test is evaluated by measuring the degradation rate of nitric oxide (NO) using the method specified herein. The photocatalytic abatement rate is calculated from the observed rate by eliminating the effects of mass transfer. The intrinsic photocatalytic abatement rate is an intrinsic property of the material tested and makes it possible to distinguish the photocatalytic activities of various products with an absolute scale defined with physical and engineering meaning. For the measurements and calculations described in this document the concentration of nitrogen oxides (NOx) is defined as the stoichiometric sum of nitric oxide (NO) and nitrogen dioxide (NO2).

CEN/TR 17654:2021

BIM-i rakenduskavade (BEP) ja infovahetuse nõuete (EIR) Euroopa tasandil juurutamise juhend standardite EN ISO 19650-1 ja -2 põhjal

Guideline for the implementation of BIM Execution Plans (BEP) and Exchange Information Requirements (EIR) on European level based on EN ISO 19650-1 and -2

Selles juhendis käsitletakse protsesse, mis on seotud info hankimise ja edastamisega projekteerimise ja ehitusprojektide tarbeks, täpsemalt lähteülesannet kirjeldavat dokumenti (EIR) ja BIM-i rakenduskava (BEP), võttes arvesse haldusprosesse. Selles juhendis arvestatakse rahvusvaheliste standardite ja kirjelduste ning soovituslike praktikatega. See dokument on mõeldud kõigile esitatavate infotulemude kättesaadavaks tegemisega seotud osalistele. Sealhulgas nii neile, kes infot vajavad, kui ka neile, kes infot esitavad. Nõutav info võib puudutada kõiki elutsükli protsesse, nagu projekteerimine, ehitus, käärimine ja hooldus ning elutsükli lõpu protsessid. See kehtib eeskõige nt kliendile, vara omanikule/käitajale, arhitektile, insenerile, ehitajale, alltöövõtjatele jne. Juhendis kirjeldatakse tellijatele metoodikat, kuidas nõuda ja kokku leppida infovajaduse õige hulk, kvaliteet ja tase. Samuti on oluline, et täitjad saaksid hinnata olemasolevate EIR-ide kvaliteeti ning tuvastada võimalikke ülekirjeldusi või lünki. Selle alusel on võimalik prognoosida ja arvutada andmete koostamiseks vajalikku ressurssi. Selles dokumendis operatsionaliseeritakse infotulemiste määramise ja kokkuleppimise protsess standardi EN ISO 19650-2:2018 järgi. See aruanne ei hõlma kõiki standardi EN ISO 19650-2:2018 jaotisi. Selle peamine eesmärk on anda näidismalle ja juhiseid kõigiks tegevusteks, mille käigus kirjeldatakse infovahetuse nõuete ja BIM-i rakenduskava koostamise nõudeid ja tulemeid. Täpsemalt hõlmab see standardi EN ISO 19650-2:2018 jaotiste 5.2.1 (EIR), 5.3.2 (määramiseelne BEP) ja 5.4.1 (kinnitatud BEP) kohustuslike ja soovituslike nõudeid. Käsitslusala ja selle piiride määratlemiseks vt tabel 1 (vt lisa A, millistele standardi EN ISO 19650-2:2018 osadele on olemas mallid).

Akustika. Heliisolatsiooni mõõtmise hoonees ja hoone osadel. Osa 1: Õhuheli isolatsioon Acoustics - Field measurement of sound insulation in buildings and of building elements - Part 1: Airborne sound insulation (ISO 16283-1:2014 + ISO 16283-1:2014/Amd 1:2017)

Selles standardi ISO 16283 osas määratatakse meetodid õhuheli isolatsiooni mõõtmiseks helirõhu abil hoone kahe ruumi vahel. Need meetodid on ette nähtud ruumidele ruumalaga 10 m³ kuni 250 m³ sagedusala 50 Hz kuni 5000 Hz. Mõõtmistulemused kehtivad möbleerimata või möbleeritud ruumide õhuheli isolatsiooni määramisel, hindamisel ja võrdlemisel, kus helivälja võib võrrelda hajutatud või hajutamata väljaga. Mõõdetud õhuheli isolatsioon sõltub sagedusest ja seda saab teisendada üheaarvuliseks suuruseks kasutades standardis ISO 717-1 esitatud meetodit.

EVS-EN ISO 22476-4:2021

Geotechnical investigation and testing - Field testing - Part 4: Prebored pressuremeter test by Ménard procedure (ISO 22476-4:2021)

This document specifies equipment requirements, the execution of and reporting on the Ménard pressuremeter test. This document describes the procedure for conducting a Ménard pressuremeter test in natural grounds, treated or untreated fills, either on land or off-shore. The pressuremeter tests results of this document are suited to a quantitative determination of ground strength and deformation parameters. They can yield lithological information in conjunction with measuring while drilling performed when creating the borehole (according to ISO 22476-15). They can also be combined with direct investigation (e.g. sampling according to ISO 22475-1) or compared with other in situ tests (see EN 1997-2).

Laminate floor coverings - Elements with a surface layer based on aminoplastic thermosetting resins - Specifications, requirements and test methods

This European Standard specifies characteristics, requirements and test methods for laminate floor coverings with a surface layer based on aminoplastic thermosetting resins as defined in 3.1 and 3.2. It also specifies requirements for marking and packaging. It includes a classification system, based on EN ISO 10874, giving practical requirements for areas of use and levels of use, to indicate where laminate floor coverings will give satisfactory service and to encourage the consumer to make an informed choice. Laminate floor coverings are considered for domestic and commercial levels of use, including domestic kitchens. This standard does not specify requirements relating to areas which are subjected to frequent wetting, such as bathrooms, laundry rooms or saunas.

Kodumajapidamises kasutatavad elektrilised toiduvalmistusseadmed. Osa 1: Pliidid, ahjud, auruahjud ja grillid. Toimivuse mõõtemeetodid

Household electric cooking appliances - Part 1: Ranges, ovens, steam ovens and grills - Methods for measuring performance (IEC 60350-1:2016 , modified + IEC 60350-1:2016/A1:2021)

This part of IEC 60350 specifies methods for measuring the performance of electric cooking ranges, ovens, steam ovens, and grills for household use. NOTE 3 This document is also applicable to portable appliances with similar functionalities that were previously covered by the withdrawn IEC 61817. The ovens covered by this standard may be with or without microwave function. Manufacturers should define the primary cooking function of the appliance – microwave function or thermal heat. The primary cooking function should be measured with an existing method according to energy consumption. If the primary cooking function is declared in the instruction manual as a microwave function, IEC 60705 is applied for energy consumption measurement. If the primary cooking function is declared as a thermal heat, then IEC 60350-1 is applied for energy consumption measurement. If the primary function is not declared by the manufacturer, the performance of the microwave function and thermal heat should be measured as far as it is possible. NOTE 1 For measurement of energy consumption and time for heating a load (see 7.4), this standard is furthermore not applicable to: – microwave combination function; – ovens with reciprocating trays or turntable; – small cavity ovens; – ovens without adjustable temperature control; – heating functions other than defined in 3.12 to 3.14; – appliances with only solo steam function (3.15). NOTE 2 This standard does not apply to – microwave ovens (IEC 60705), – deleted text This standard defines the main performance characteristics of these appliances which are of interest to the user and specifies methods for measuring these characteristics. This standard does not specify a classification or ranking for performance. NOTE 3 Some of the tests which are specified in this standard are not considered to be reproducible since the results may vary between laboratories. They are therefore intended for comparative testing purposes only. NOTE 4 This standard does not deal with safety requirements (IEC 60335-2-6 and IEC 60335-2-9). NOTE 5 Appliances covered by this standard may be built-in or for placing on a working surface or the floor. NOTE 6 There is no measurement method for the energy consumption for grilling and steam functions available.

STANDARDIKAVANDITE ARVAMUSKÜSITLUS

Selleks, et tagada standardite vastuvõtmise, järgides konsensusse põhimõtteid, peab standardite vastuvõtmisele eelnema standardikavandite avalik arvamusküsitlus, milleks ettenähtud perioodi jooksul (üldjuhul 60 päeva) on ajast huvitatui võimalik tutvuda standardikavanditega, esitada kommentaare ning teha ettepanekuid parandusteks. Eriti on oodatud teave, kui rahvusvahelist või Euroopa standardikavandit ei peaks vastu võtma Eesti standardiks (vastuolu Eesti õigusaktidega, pole Eestis rakendatav jt põhjustel).

Arvamusküsitlusele esitatakse Euroopa ja rahvusvahelised standardikavandid, mis on kavas üle võtta Eesti standarditeks, ja Eesti algupärased standardikavandid ning algupäraste tehniliste spetsifikatsioonide ja juhendite kavandid.

Iga arvamusküsitlusel oleva kavandi kohta on esitatud alljärgnev informatsioon:

- tähis;
- pealkiri;
- käsitusala;
- keel (en = inglise; et = eesti);
- Euroopa või rahvusvahelise alusdokumendi tähis, selle olemasolul;
- asendusseos, selle olemasolul;
- arvamuste esitamise tähtaeg.

Kavanditega saab tutvuda ja kommentaare esitada Eesti Standardimis- ja Akrediteerimiskeskuse veebilehel asuvas kommenteerimisportaalil: <https://www.evs.ee/kommenteerimisportaal/>

Igal kuul uuendatav teave eestikeelsena avaldatavate Eesti standardite kohta, sh eeldatavad kommenteerimise ja avaldamise tähtpäevad, on leitav Eesti Standardimis- ja Akrediteerimiskeskuse veebilehel avaldatavast standardimisprogrammist.

prEN ISO 41018

Facility management - Development of a facility management policy (ISO/DIS 41018:2021)

The standard will provide guidance with recommendations on the ways in which an organization can develop FM Policy to support planning of day-to-day operations by translating the organization's FM strategy into implementable actions. The guidance will define the framework for FM policy making that can be used to identify the key principles, decisions and actions that are necessary to establish the FM Policy to meet the organization's strategic intent. Consideration will also be given to identify the overall requirements, expected practices, procedures, protocols and controls to ensure that the FM Policy is fit for purpose. The standard will extend to implementation of the FM Policy, including communication, review and revision, so that it can be maintained as a current document to serve the organization's work into the future. Microbiology of the food chain - Horizontal method for the detection and enumeration of Clostridium spp. - Part 1: Enumeration of sulfite-reducing Clostridium spp. by colony-count technique (ISO/DIS 15213-1:2021)

This document specifies the detection of Clostridium perfringens. This part of ISO 15213 is applicable to: • products intended for human consumption; • products intended for animal feeding; • environmental samples in the area of food and feed production, handling, and • samples from the primary production stage. This method is applicable when the number sought is expected to be below 100 per ml or per g of the test sample.

prEN 17694-2

Hydrometry - Performance requirements and test procedures for water monitoring equipment - Devices for the determination of flow Part 2: Closed conduit instrumentation

This European standard specifies general requirements, minimum performance requirements and test procedures for instrumentation used to measure either volumetric flow-rate and/or total volume passed of water in closed conduits. It covers all closed conduit instrument (CCI) technologies intended to operate in closed pressurised pipes and partially filled pipes. It is recognised that for some CCIs certain tests cannot be carried out. The data obtained from the testing of CCIs in accordance with the requirements of the Measuring Instruments Directive [4] or ISO4064-1 [5] can be used to meet, in part, the requirements specified in this European Standard. However, for the avoidance of doubt, compliance with the requirements of this European Standard does not equate to compliance with the requirements of the Measuring Instruments Directive or ISO 4064-1.

23 ÜLDKASUTATAVAD HÜDRO- JA PNEUMOSÜSTEEMID JA NENDE OSAD

EN 13611:2019/prA1

Safety and control devices for burners and appliances burning gaseous and/or liquid fuels - General requirements

This European Standard specifies the general safety, design, construction, and performance requirements and testing of safety, control or regulating devices (hereafter referred to as controls) for burners and appliances burning one or more gaseous fuels or liquid fuels. This European Standard is applicable to controls with declared maximum inlet pressure up to and including 500 kPa and of nominal connection sizes up to and including DN 250. This European standard specifies general product requirements for the following controls: — automatic shut-off valves; — automatic burner control systems; — flame supervision devices; — gas/air ratio controls; — pressure regulators; — manual taps; — mechanical thermostats; — multifunctional controls; — pressure sensing devices; — valve proving systems; — automatic vent valves. This European standard applies for control functions that are not covered by a specific control standard for burners and appliances burning one or more gaseous fuels or liquid fuels. This European Standard applies also for safety accessories and pressure accessories with a product of the maximum allowable pressure PS and the volume V of less than $600\ 000\ \text{kPa} \cdot \text{dm}^3$ ($6\ 000\ \text{bar} \cdot \text{L}$) or with a product of PS and DN of less than $300\ 000\ \text{kPa}$ ($3\ 000\ \text{bar}$). This European Standard applies for AC and DC supplied controls (for controls supplied by stand-alone battery system, battery systems for mobile applications or systems which are intended to be connected to DC supply networks controls see Annex I). This European Standard is applicable to reset functions used for reset from lockout, e.g. due to ignition failure or temperature cut-out in burners and appliances (see Annex M). This European Standard establishes methodologies for the determination of a Safety Integrity Level (SIL) and the determination of a Performance Level (PL) (see Annex J, Annex K and Annex L). This European Standard gives guidelines for environmental aspects (see Annex N). This European Standard does not apply to mechanical controls for use with liquid fuels. The protection against environmental impact in open air (i.e. capable of withstanding UV radiation, wind, rain, snow, dirt deposits, condensation, ice and hoar frost (see IEV 441-11-05:2005), earthquake and external fire) is not covered by this standard. This European Standard should be used in conjunction with the specific control standard (see Bibliography).

Transportable gas cylinders - Refillable welded steel gas cylinders - Design and construction - Part 1: Carbon steel

This document specifies minimum requirements concerning material, design, construction and workmanship, manufacturing processes and testing of refillable transportable welded carbon steel gas cylinders of water capacities up to and including 150 l for compressed, liquefied and dissolved gases. For cylinders made from high frequency induction (HFI) welded steel tubes by spinning of the end, the requirements are given in Annex A. This document is primarily for industrial gases other than LPG but can also be applied for LPG. However, for dedicated LPG cylinders, see EN 1442, Transportable refillable welded steel cylinders for liquefied petroleum gas (LPG) - Design and construction prepared by CEN/TC 286 Liquefied petroleum gas equipment and accessories.

Cryogenic vessels - Hoses (ISO/DIS 21012:2021)

This document specifies design, construction, type and production testing, and marking requirements for non-insulated cryogenic flexible hoses used for the transfer of cryogenic fluids within the following range of operating conditions: — working temperature: from -270°C to $+65^{\circ}\text{C}$; — nominal size (DN): from 10 to 100. End fittings for mounting of any couplings are within the scope of this document, but the couplings are subject to other standards. It is intended that the hose be designed and tested to satisfy a rated pressure. Hoses may be then selected with a PR equal to or greater than the maximum allowable pressure (PS) of the equipment to which it is to be used.

Insulation co-ordination - Part 12: Application guidelines for LCC HVDC converter stations

This standard applies guidelines on the procedures for insulation co-ordination of line commutated converter (LCC) stations for high-voltage direct current (HVDC) project, whose aim is to give guidance for the determination of the specified withstand voltages for equipment. The content of this document strictly follows the flow chart of the insulation co-ordination process and give detailed information on the concepts governing the insulation co-ordination process which leads to the establishment of the specified withstand voltage levels. This document emphasizes the necessity of considering, at the very beginning, all origins, all classes and all types of voltage stresses in service. At the end of the process, when the selection of the specified withstand voltages takes place, does the principle of covering a particular service voltage stress by a specified withstand voltage apply. The annex contains examples of insulation co-ordination for LCC HVDC converters which support the concepts described in the main text, and the basic analytical techniques used.

Power transformers - Part 25: Neutral grounding resistors

This part of IEC 60076 applies to the resistors used to limit the earth fault current in power systems. Both terms Neutral Grounding Resistor (NGR) and Neutral earthing resistor (NER) can be used. However, for the purpose of this standard and in order to avoid any confusion with Neutral earthing reactor (NER), the term Neutral grounding resistor (NGR) will be used. This standard states:

- The characteristics of the NGR
- The service conditions with which the NGR have to comply
- The tests intended for confirming that these conditions have been met and the methods to be adopted for these tests
- The information to be marked on, or given with, the NGR.

Annex A provides guidance on how to consider the effect of resistance variation with temperature. This document applies to metallic element, dry type, natural air cooled NGR for neutral grounding of transformers and generators either directly or indirectly. This standard applies to all NGR whether they are designed, manufactured and verified on a one-off basis or fully standardized and manufactured in quantity. Other neutral grounding devices can be used for similar purposes as the NGR's but are not covered by this standard.

prEN 301 025 V2.2.4

**Üldside VHF raadiotelefoniseadmed ja klassi D digitaalselektiivväljakutse (DSC) lisaseadmed;
Raadiospektrile juurdepääsu ja hädaabiteenuste funktsioonide harmoneeritud standard
VHF radiotelephone equipment for general communications and associated equipment for
Class "D" Digital Selective Calling (DSC); Harmonised Standard for access to radio spectrum
and for features for emergency services**

The present document specifies technical characteristics and methods of measurements for VHF radiotelephone with the following characteristics:

- operating in the channels and frequencies specified in the ITU Radio Regulations appendix 18 as applicable, allocated to the maritime mobile service;
- using either 25 kHz or 25 kHz and 12,5 kHz channels and associated equipment for DSC - class D;
- capable of operating on single frequency and two-frequency channels with manual control (simplex);
- supporting dual frequency simplex operation only;
- using phase modulation, G3E (frequency modulation with pre-emphasis of 6 dB/octave) for speech, and G2B for DSC signalling.

Full duplex operation is not supported. The present document does not provide technical requirements for conformance with the essential requirements of Directive 2014/53/EU for any integrated GNSS receiver providing locating function. NOTE 1: Additional VHF channels for maritime use outside those defined by appendix 18 to the Radio Regulations may also be provided where permitted by administration. NOTE 2: The relationship between the present document and essential requirements of article 3.2 and article 3.3(g) of Directive 2014/53/EU is given in annex A.

Short Range Devices (SRD); Inductive loop systems for robotic mowers; Harmonised Standard for access to radio spectrum

The present document specifies technical characteristics and methods of measurements for Robotic Mowers with Inductive loop systems (RMI) below 148,5 kHz. The present document covers the following RMI systems: • RMI1 systems: RMI systems without receive only mode of the robotic mower • RMI2 systems: RMI systems with receive only mode of the robotic mower
NOTE 1: In RMI1 systems the robotic mower is not able to restart automatically if the boundary signal comes back after the loss of the boundary signal (safe mode, see clause 4.2.2.3), while in RMI2 systems the robotic mower is able to restart automatically after the boundary signal is back. This differentiation has been introduced to cover receiver spurious emissons for RMI2 systems. These radio equipment types are capable of operating in all or part of the frequency bands given in table 1. Table 1: Permitted range of operation Permitted range of operation Transmit 100 Hz to 148,5 kHz Receive 100 Hz to 148,5 kHz NOTE: It should be noted that the frequency range between 9 kHz and 148,5 kHz is EU wide harmonised for inductive Short Range Devices according to EC Decision 2017/1483/EU. NOTE 2: The relationship between the present document and essential requirements of article 3.2 of Directive 2014/53/EU is given in Annex A. The present document only covers RMI systems with antenna sizes smaller than 1,67 km, see CEPT/ERC/REC 70-03, Annex 9. NOTE 3: The antenna size is described by the distance between those two points on the antenna that have the largest distance between them (e.g. for a rectangle shaped antenna the largest diagonal; for a circular shaped antenna the diameter).

prEN 319 132-1 V1.2.0

Electronic Signatures and Infrastructures (ESI); XAdES digital signatures; Part 1: Building blocks and XAdES baseline signatures

The present document specifies XAdES digital signatures. XAdES signatures build on XML digital signatures, by incorporation of signed and unsigned qualifying properties, which fulfil certain common requirements (such as the long term validity of digital signatures, for instance) in a number of use cases. The present document specifies XML Schema definitions for the aforementioned qualifying properties as well as mechanisms for incorporating them into XAdES signatures. The present document specifies formats for XAdES baseline signatures, which provide the basic features necessary for a wide range of business and governmental use cases for electronic procedures and communications to be applicable to a wide range of communities when there is a clear need for interoperability of digital signatures used in electronic documents. The present document defines four levels of XAdES baseline signatures addressing incremental requirements to maintain the validity of the signatures over the long term, in a way that a certain level always addresses all the requirements addressed at levels that are below it. Each level requires the presence of certain XAdES qualifying properties, suitably profiled for reducing the optionality as much as possible. Procedures for creation, augmentation, and validation of XAdES digital signatures are out of scope and

specified in ETSI EN 319 102-1. Guidance on creation, augmentation and validation of XAdES digital signatures including the usage of the different properties defined in the present document is provided in ETSI TR 119 100. The present document aims at supporting electronic signatures in different regulatory frameworks. NOTE: Specifically but not exclusively, XAdES digital signatures specified in the present document aim at supporting electronic signatures, advanced electronic signatures, qualified electronic signatures, electronic seals, advanced electronic seals, and qualified electronic seals as per Regulation (EU) No 910/2014.

prEN ISO/IEEE 11073-40101

Health informatics - Device interoperability - Part 40101: Foundational - Cybersecurity - Processes for vulnerability assessment (ISO/IEEE FDIS 11073-40101:2021)

Within the context of secure plug-and-play interoperability, cybersecurity is the process and capability of preventing unauthorized access or modification, misuse, denial of use, or the unauthorized use of information that is stored on, accessed from, or transferred to and from a PHD/PoCD. The process part of cybersecurity is risk analysis of use cases specific to a PHD/PoCD. For PHDs/PoCDs, this standard defines an iterative, systematic, scalable, and auditable approach to identification of cybersecurity vulnerabilities and estimation of risk. This iterative vulnerability assessment uses the Spoofing, Tampering, Repudiation, Information Disclosure, Denial of Service, and Elevation of Privilege (STRIDE) classification scheme and the embedded Common Vulnerability Scoring System (eCVSS). The assessment includes system context, system decomposition, pre-mitigation scoring, mitigation, and post-mitigation scoring and iterates until the remaining vulnerabilities are reduced to an acceptable level of risk.

Health informatics - Device interoperability - Part 40102: Foundational - Cybersecurity - Capabilities for mitigation (ISO/IEEE FDIS 11073-40102:2021)

Within the context of secure plug-and-play interoperability, cybersecurity is the process and capability of preventing unauthorized access or modification, misuse, denial of use, or the unauthorized use of information that is stored on, accessed from, or transferred to and from a PHD/PoCD. The capability part of cybersecurity is information security controls related to both digital data and the relationships to safety and usability. For PHDs/PoCDs, this standard defines a security baseline of application layer cybersecurity mitigation techniques for certain use cases or for times when certain criteria are met. This standard provides a scalable information security toolbox appropriate for PHD/PoCD interfaces, which fulfills the intersection of requirements and recommendations from National Institute of Standards and Technology (NIST) and the European Network and Information Security Agency (ENISA). This standard maps to the NIST cybersecurity framework [B15]; IEC TR 80001-2-2 [B8]; and the Spoofing, Tampering, Repudiation, Information Disclosure, Denial of Service, and Elevation of Privilege (STRIDE) classification scheme. The mitigation techniques are based on the extended CIA triad (Clause 4) and are described generally to allow manufacturers to determine the most appropriate algorithms and implementations.

Leather - Chemical determination of metal content - Part 2: Total metal content (ISO/DIS 17072-2:2021)

This part of ISO 17072 specifies a method for the determination of the total metal content in leather using digestion of the leather and subsequent determination with inductively coupled plasma/optical emission spectrometry (ICP-OES), or inductively coupled plasma/mass spectrometry (ICP-MS), or atomic absorption spectrometry (AAS) or spectrometry of atomic fluorescence (SFA). This method determines the total metal content in leather; it is not compound-specific or specific to the oxidation state of the metals. The method is applicable for determining the following metals: Aluminium (Al) Copper (Cu) Potassium (K) Antimony (Sb) Iron (Fe) Selenium (Se) Arsenic (As) Lead (Pb) Silicon (Si) Barium (Ba) Magnesium (Mg) Sodium (Na) Cadmium (Cd) Manganese (Mn) Tin (Sn) Calcium (Ca) Mercury (Hg) Titanium (Ti) Chromium (Cr) (except chromium-tanned leathers) Molybdenum (Mo) Zinc (Zn) Cobalt (Co) Nickel (Ni) Zirconium (Zr). This method is also suitable for determining Boron (B) in leather. The quantification limit of total lead is 8 mg/kg (see Annex A). This part of ISO 17072 is not applicable to chromium-tanned leathers. In this case, ISO 5398-1, or ISO 5398-2, or ISO 5398-3, or ISO 5398-4 are used.

prEN ISO 18218-1

Leather - Determination of ethoxylated alkylphenols - Part 1: Direct method (ISO/DIS 18218-1:2021)

ISO 18218-1:2015 is a method for determining ethoxylated alkylphenols (nonyphenol ethoxylate [NPEOn with $1 \leq n \leq 16$] and octylphenol ethoxylate [OPEOn with $1 \leq n \leq 16$]) in leather. This direct method is especially suitable where a larger number of leather samples are to be checked for the presence of ethoxylated alkylphenols. This method requires the use of high-performance liquid chromatography (HPLC) with triple quadrupole mass spectrometer (MSMS) to identify and quantify the ethoxylated alkylphenols. NOTE 1 In the leather industry, the most commonly used commercial ethoxylated alkylphenol is the NPEO with an average of 9 EO. It has an optimum cloud point in water for the typical leather processing temperatures of 40 °C to 55 °C. NOTE 2 ISO 18218-1 and ISO 18218-2 use different solvents for the extraction of the ethoxylated alkylphenols from leather. Consequently, the two analytical methods are expected to give similar trends but not necessarily the same absolute result for the ethoxylated alkylphenol content in leather.

Cryogenic vessels - Hoses (ISO/DIS 21012:2021)

This document specifies design, construction, type and production testing, and marking requirements for non-insulated cryogenic flexible hoses used for the transfer of cryogenic fluids within the following range of operating conditions: — working temperature: from -270°C to $+65^{\circ}\text{C}$; — nominal size (DN): from 10 to 100. End fittings for mounting of any couplings are within the scope of this document, but the couplings are subject to other standards. It is intended that the hose be designed and tested to satisfy a rated pressure. Hoses may be then selected with a PR equal to or greater than the maximum allowable pressure (PS) of the equipment to which it is to be used.

prEN 14024

Metal profiles with thermal barrier - Mechanical performance - Requirements, proof and tests for assessment

This document specifies requirements for assessment of the mechanical strength of metal profiles incorporating a thermal barrier having mechanical performance depending on their intended use. It also specifies the tests to determine the characteristic values of mechanical properties of the thermal barrier profile and to assess the effect of different conditionings of the thermal barrier on the mechanical performance of the connection. Thermal barriers which do not give a contribution to the mechanical resistance of the profiles are excluded from this document. This document applies to thermal barrier profiles designed mainly for windows, doors, screens and curtain walls. It does not apply to thermal barriers made only of metal profiles connected with metal pins or screws.

Chimneys - Design, installation and commissioning - Part 1: Chimneys and connecting flue pipes for non-room sealed combustion appliances

This European Standard describes the method of specifying the design, installation criteria for system chimneys, construction of custom built chimneys, and the relining of existing chimneys. It also gives information on commissioning of chimneys. This

European Standard also deals with connecting flue pipes. This European Standard does not apply to freestanding chimneys covered by EN 13084-1. This European Standard excludes chimneys designated H (high positive pressure chimneys) and chimneys for room-sealed heating appliances. For the purpose of this European Standard the term "installation" includes construction.

Chimneys - Design, installation and commissioning - Part 2: Chimneys and connecting flue pipes for room sealed combustion appliances

This European Standard describes the method of specifying the design, installation and labelling criteria for chimney systems, construction of custom-built chimneys, the relining or converting of existing chimneys, connecting flue pipes and air supply pipes for roomsealed applications. It also gives information on commissioning of an installed chimney. This European Standard applies to chimneys which are subject to the following limiting conditions (specified in EN 13084-1): — the horizontal distance between the building and the outer wall of the chimney system not to exceed 1 m, — the distance between the supports not to exceed 4 m, — the distance above the last structural attachment not to exceed 3 m. This standard does not cover: — chimneys which serve a mixture of fan assisted or forced draught burners or natural draught appliances, — installations having a configuration of the type C2. NOTE Roomsealed gas appliances are classified as type C according to EN 1749. The methods in this part of this European Standard are applicable to chimneys and connecting flue pipes for room sealed combustion appliances. The methods in Part 1 of this European Standard are applicable to chimneys and connecting flue pipes for non-room sealed combustion appliances. For the purpose of this European Standard the term "installation" includes construction.

Geosynthetic clay barriers - Determination of water flux index - Flexible wall permeameter method at constant head

This European Standard describes an index test method that covers laboratory measurement of water flux through saturated clay geosynthetic barrier (GBR-C) specimens using a flexible wall permeameter at constant head. This test method is applicable to GBR-C products with no additional sealing layers attached. This test method provides a measurement of flux under a prescribed set of conditions that can be used for manufacturing quality control. The test method can also be used to check conformance. The flux value determined using this test method is not considered to be representative of the in-service flux of a GBR-C.

Commercial dishwashing machines - Hygiene requirement and testing

This document specifies hygiene requirements relating to the operation of commercial dishwashing machines (hereinafter referred to as dishwashing machines). It specifies requirements for hygienic results of the articles treated in the dishwashing machines. This includes also guidelines for their hygienic and proper operation and for care and maintenance of the machinery. Furthermore, methods for testing hygienic operation are defined. Dishwashing machines are used in a professional environment for cleaning washware that is used in contact with food. This document applies to dishwashing machines for cleaning washware that is used in contact with food, such as crockery, glassware, cutlery, reusable boxes and similar articles. Dishwashing machines (see 3.3) are used in kitchens e.g. in restaurants, canteens and hospitals and in commercial enterprises such as bakeries, butcher's shops, etc. This document does not apply to domestic dishwashing machines, washer disinfectors for the treatment of medical devices and machines for industrial use (e.g. machines for cleaning proofing trays, returnable bottles, equipment of other machines like mincer, slicer, cutter, dough dividers or kneader, mixers, stirrers and all other kind of machines from which parts could be cleaned by washing out of place (WOP)).

TÖLKED KOMMENTEERIMISEL

Allpool on toodud teave kommenteerimisetappi jõudnud eesti keelde tõlgitavate Euroopa või rahvusvaheliste standardite ja standardilaadsete dokumentide kohta ja inglise keelde tõlgitavate algupäraste Eesti standardite ja dokumentide kohta.

Tõlkekavanditega saab tutvuda ja kommentaare esitada Eesti Standardimis- ja Akrediteerimiskeskuse veebilehel asuvas kommenteerimisportaalil: <https://www.evs.ee/kommmenteerimisportaal/>

Igal kuul uuendatav teave eestikeelsena avaldatavate Eesti standardite kohta, sh eeldatavad kommenteerimise ja avaldamise tähtpäevad, on leitav Eesti Standardimis- ja Akrediteerimiskeskuse veebilehel avaldatavast standardimisprogrammist.

EVS-EN 14885:2018

Keemilised desinfektsioonivahendid ja antiseptikumid. Keemiliste desinfektsioonivahendite ja antiseptikumide Euroopa standardite rakendamine

Selles dokumendis täpsustatakse Euroopa standardid, millele tooted peavad vastama, et toetada selles Euroopa standardis osutatud väiteid mikrobiitsidse toime kohta. Selles dokumendis täpsustatakse ka Euroopa standardis kasutatavad terminid ja määratlused. Seda kohaldatakse toodete suhtes, mille puhul väidetakse toimet järgmiste mikroorganismide suhtes: vegetatiivs bakterid (sealhulgas mükobakterid ja Legionella), bakteriaalsed spoorid, pärmeened, seene spoorid ja viirused (sealhulgas bakteriofaagid). See on ette nähtud: a) võimaldama toodete tootjatel valida sobivad standardid, mida kasutada andmete esitamiseks, mis toetavad nende väiteid konkreetse toote kohta; b) võimaldama toote kasutajatel hinnata tootja esitatud teavet kasutusotstarbe kohta, mille jaoks nad kavatsevad toodet kasutada; c) aitama reguleerivatel asutusel hinnata tootja või toote turuleviimise eest vastutava isiku esitatud nõudeid. Seda kohaldatakse toodete suhtes, mida kasutatakse inimmeditsiinis, veterinaarias ning toidu-, tööstuse-, kodumajapidamis- ja ametkondlikus valdkonnas. Inimmeditsiini valdkonnas kohaldatakse seda keemiliste desinfektsioonivahendite ja antiseptikumide suhtes, mida kasutatakse piirkondades ja olukordades, kus on meditsiiniliselt osutatud desinfektsioonile või antiseptikale. Sellised näidustused esinevad patsiendi hooldamisel: — haiglates, pogokonna meditsiiniasutustes ja hambaraviasutustes, — koolide, lasteaedade ja hooldekodude klinikutes, — ja võib esineda ka töökohal ja kodus. See võib hõlmata ka selliseid teenuseid nagu pesumaja ja köögid, mis tarnivad tooteid otse patsiendile. Veterinaarias on see kasutatav keemiliste desinfektsioonivahendite ja antiseptikumide jaoks, mida kasutatakse aretuses, loomakasvatuses, veterinaarhooldusasutustes, tootmisel, loomade transportimisel ja körvaldamisel. Seda ei kohaldata keemiliste desinfektsioonivahendite suhtes, mida kasutatakse toiduahelas pärast surma ja töötlevasse tööstusesse sisenemist. Toidu-, tööstuse-, kodumajapidamis- ja ametkondlike valdkondades on see kohaldatav loomset või taimset päritolu toidu töötlemisel, turustamisel ja jaemügil kasutatavate keemiliste desinfektsioonivahendite ja antiseptikumide suhtes. See kehtib ka toodete kohta kõikides avalikes kohtades, kus desinfektsioon ei ole meditsiiniliselt näidustatud (kodus, toitlustus, koolid, lasteaiad, transport, hotellid, kontorid jne), ja toodetele, mida kasutatakse pakendite, biotehnoloogia-, farmatsia-, kosmeetika- jms tööstuses. See dokument on kohaldatav ka väljatöötamisel olevate toimeainetele ja toodetele, mille rakendusala pole veel kindlaks määratud. See dokument ei viita toodete või toimeainete toksikoloogiliste ja ökotoksikoloogiliste omaduste katsetamise meetoditele.

Plekist katuse- ja välisseinakattetoodete. Isekandvate terasest, alumiiniumist ja roostevabast terasest plekist valmistatud toodete spetsifikatsioon Osa 3: Roostevaba teras

See standardi EN 508 osa esitab nõuded välise katuse ja seinte kattena (fassaadi kattena), vooderduse, kassetprofiilidena ja katusekiviprofiilidena kasutatavale, mittepidevalt (tükkitäidena) paigaldatavale isekandvale profileeritud roostevabast terasest plekile, mis on täiendava metall- ja/või orgaanilise pinnakattega või ilma. Samuti kuulub käsitlusallasesse soojustusega ja membraaniga kaetud plekk. See dokument kehtestab üldised omadused, määratlused, klassifikatsiooni ning toodete sildistamise koos nõuetega materjalidele, milles neid tooteid võib valmistada. Standard on mõeldud kasutamiseks nii tootjatele, tagamaks toodete vastavuse nõuetele, kui ka ostjatele, veendumaks, et ostetud toodet vastavad nõuetele enne nende tehaseset väljastamist. Standard määratleb nõuded toodetele, mida on võimalik kasutada kõigis normaalsetes ekspluatatsioonitingimustes. See dokument kehtib kõigile mittepidevalt paigaldatavatele isekandvatele väliskasutuse profileeritud katuseplaatidele, seinakatetele, vooderdustele ning kassetprofiilidele, välja arvatud katusekiviprofiiliga tooted, mille pind on väiksem kui 1 m² ning mis on toodetud stantsimise teel. Need profileeritud katuseplaadid on kujundatud, takistamaks tuule, vihma ja lume hoonesse sattumist ning edastamaks kõik summaarsed koormused ja harva esinevad hoolduskoormused kandekonstruktsioonile. See dokument ei hõlma kandekonstruktsiooniks ette nähtud tooteid, st see hõlmab

konstruktsiooniklassi III kuuluvaid ehitistes kasutatavaid tooteid (standardi EN 1993-1-3 kohaselt), ei hõlma aga konstruktsiooniklassidesse I ja II kuuluvaid ehitistes kasutatavaid tooteid (standardi EN 1993-1-3 kohaselt), mis on ette nähtud hoone konstruktsiooni üldise või osalise stabiilsuse kindlustamiseks, tagades lõiketugevuse või vastupanu püsivatele staatlistele koormustele (välja arvatud pleki omakaal). Standard ei sisalda nõudeid kandekonstruktsiooni, katuse, seinakatte, vooderduse ja katusekiviprofiilide kujunduse ning ühenduste ja hüdroisolatsiooni teostuse kohta.

STANDARDITE JA STANDARDILAADSETE DOKUMENTIDE ÜLEVAATUS

Algupärase Eesti standardi ülevaatus toimub üldjuhul iga viie aasta järel ning selle eesmärk on kontrollida standardi tehnilist taset, vastavust aja nõuetele, vastavust kehtivatele õigusaktidele, kooskõla rahvusvaheliste või Euroopa standarditega jne.

Ülevaatuse tulemusena jäetakse standard kehtima, algatatakse standardi muudatuse või uustöötluse koostamine, tühistatakse standard või asendatakse see ülevõetava Euroopa või rahvusvahelise standardiga.

PIKENDAMISKÜSITLUS

CEN/TR 17614:2021

Standardmeetod reoveepuhastite energiatõhususe hindamiseks ja parandamiseks

Standard method for assessing and improving the energy efficiency of waste water treatment plants

Selles dokumendis määratletakse reoveepuhastite (RVP) energiatõhususe määramise ja hindamise metoodika. Metoodika eesmärk on süsteemselt kirjeldada erinevaid samme, mis on vajalikud konkreetse RVP reoveepuhastuse energiaindeksi (WTEI) leidmiseks. Metoodika hõlmab RVP-de liigitamist eri tüüpidesse, erinevate puhasetappide väljaselgitamist, tulemuslikkuse põhinäitajate (key performance indicators, KPI-d) väljaselgitamist, ülevaadet olemasolevatest energiaseire standarditest ja metoodika üksikasjalikku kirjeldust, sealhulgas sammusmärgist juhist selle rakendamiseks ja kasutamiseks. Metoodika jaguneb 2 alammeetodiks, mille seast tuleks teha valik ja mida tuleks järgida vastavalt järgmistele eesmärkidele: — Kiirauditi (Rapid Audit, RA) meetod võimaldab kiiresti välja arvestada reoveepuhastuse energiaindeksi (WTEI), mis põhineb olemasoleval teabel, näiteks varasematel andmetel, mis puudutavad energiakasutust ning reo- ja heitvee kvaliteedinäitajaid. Selle metoodika eesmärk on leida RVP energia võrdlusalus, kire töövahend, selgitamaks välja energiatõhusust ja -ebatõhusust, mis võimaldab kavandada täiendavaid meetmeid, aga ka hinnata RVP moderniseerimise möju. Kiirauditi metoodikat on samm-sammult kirjeldatud selle tehnilise aruande peatükis 4 ja seda saab kasutada eraldiseisva dokumendina. Kiirauditi metoodika rakendamine ühe reaalse RVP puhul on esitatud lisas A. — Otsusetoe (Decision Support, DS) meetodi puhul on vajalik energiakasutuse ja veevaliteedi parameetrite intensiivne seire kogu RVP ulatuses, mis annab täpselt ja üksikasjalikult arvutatud WTEI nii iga etapi kohta kui ka kogu puhasti üldväärtuse. Selle hinnangu eesmärk on hinnata funktsioone/seadmeid puhastis, mis võivad viia vähe energiatõhususeni. Otsusetoe metoodikat on samm-sammult kirjeldatud selle tehnilise aruande peatükis 5 ja seda saab kasutada eraldiseisva dokumendina. Otsusetoe metoodika rakendamine ühe reaalse RVP puhul on esitatud lisas B.

CEN/TR 17654:2021

BIM-i rakenduskavade (BEP) ja infovahetuse nõuete (EIR) Euroopa tasandil juurutamise juhend standardite EN ISO 19650-1 ja -2 põhjal

Guideline for the implementation of BIM Execution Plans (BEP) and Exchange Information Requirements (EIR) on European level based on EN ISO 19650-1 and -2

Selles juhendis käsitletakse protsesse, mis on seotud info hankimise ja edastamisega projekteerimise ja ehitusprojektide tarbeks, täpsemalt lähteülesannet kirjeldavat dokumenti (EIR) ja BIM-i rakenduskava (BEP), võttes arvesse haldusprotsesse. Selles juhendis arvestatakse rahvusvaheliste standardite ja kirjelduste ning soovituslike praktikatega. See dokument on mõeldud kõigile esitatavate infotulemitide kättesaadavaks tegemisega seotud osalistele. Sealhulgas nii neile, kes infot vajavad, kui ka neile, kes infot esitavad. Nõutav info võib puudutada kõiki elutsükli protsesse, nagu projekteerimine, ehitus, kaitamine ja hooldus ning elutsükli lõpu protsessid. See kehtib eelkõige nt kliendile, vara omanikule/käitajale, arhitektile, insenerile, ehitajale, alltöövtöötajate jne. Juhendis kirjeldatakse tellijatele metoodikat, kuidas nõuda ja kokku leppida infovajaduse õige hulk, kvaliteet ja tase. Samuti on oluline, et täitjad saaksid hinnata olemasolevate EIR-ide kvaliteeti ning tuvastada võimalikke ülekirjeldusi või lünni. Selle alusel on võimalik prognoosida ja arvutada andmete koostamiseks vajalikku ressurssi. Selles dokumenti operatsionaliseeritakse infotulemitide määramise ja kokkuleppimise protsess standardi EN ISO 19650-2:2018 järgi. See aruanne ei hõlma kõiki standardi EN ISO 19650-2:2018 jaotisi. Selle peamine eesmärk on anda näidismalle ja juhiseid kõigiks tegevusteks, mille käigus kirjeldatakse infovahetuse nõuete ja BIM-i rakenduskava koostamise nõudeid ja tulemeid. Täpsemalt hõlmab see standardi EN ISO 19650-2:2018 jaotiste 5.2.1 (EIR), 5.3.2 (määramiseelne BEP) ja 5.4.1 (kinnitatud BEP) kohustuslike ja soovituslike nõudeid. Käsitlusala ja selle piiride määratlemiseks vt tabel 1 (vt lisa A, millistele standardi EN ISO 19650-2:2018 osadele on olemas mallid).

EVS-EN 16907-1:2018

Mullatööd. Osa 1: Põhimõtted ja üldeeskiri

Earthworks - Part 1: Principles and general rules

Selles Euroopa standardis (osa 1) on esitatud mullatööde kavandamise, projekteerimise ja kirjeldamise mõisted, põhimõtted ja üldeeskiri. Selles tutvustatakse standardi teisi osi, mida kasutatakse koos 1. osaga. Mullatööd on tsivilehituse protsess, mille eesmärk on luua pinnaserajatisi, muutes maapinna geometriat ehitamiseks või muudeks tegevusteks. Pinnasetööde rakendusalad on seotud: — transporditaristud (maanteed, kiirteed, raudteed, veeteed, lennujaamat); — tööstus- ja kaubandushoonete ning elamute alused; — vesiehitus, kaitse üleujutuste eest ja rannakaitssetööd; — sadama- ja lennujaamalad, sealhulgas muldkehade ehitamine vees; — jõetammid ja kalarajatised merepõhja hõlvamiseks; — pinnase- ja kaljutäitega tammid; — hüdrauliilised paigaldatud täitega kaldapealsed muldkehad; — müratökked, visuaalsed tökked ja muud mittekandvad pinnasetööd; — maastikukujunduslikud muldkehad; — avatud kaevanduste ja karjääreide tagasitäätmise; — rikastamisjäätmete hoidlad. Neid iseloomustab vajadus kasutada saada olevaid looduslike või taaskasutatavaid materjale ning käsitleda neid ettenähtud omadustesse saamiseks sobival viisil. Seda standardit kohaldatakse igat tütüpi pinnaserajatiste suhtes, välja arvatud allpool loetletud juhud: — teatud liiki töid, nagu kraavide ja väikeste mullatööde teostamine, võib korraldada lihtsustatud või erieeskirjade alusel; — mõned konstruktsioonid, näiteks jõetammid ja tammid, vajavad mullatöid, millele kehtivad spetsifilised projekteerimis- ja ehitusnõuded: need võivad laieneda väljapoole selle standardi eeskirju. See standard ei hõlma maapinna parandamist pinnaserajatise all selliste meetodite abil nagu kuhjamine, jugatsementeerimine, mass-stabiliseerimine, vertikaalsed äravoolud või kivivaiad. Muutuvate aluspinnase ja kliimatingimustele tõttu Euroopas ning erinevate riiklike lepingutingimustele tõttu on mitmes Euroopa riigis kehtestatud siseriiklikud eeskirjad, mida ei olnud võimalik lühikesel ajal

jooksul Euroopa standardiga ühtlustada. Selle Euroopa standardiga kehtestatakse seega põhieeskirjad eespool kirjeldatud eesmärkide saavutamiseks. Selle dokumendi lisades B kuni H on esitatud näited nende eeskirjade järgsetest rahvuslikest tavadest.

EVS-EN ISO 11393-1:2018

Käskettsaagide kasutajate kaitseriietus. Osa 1: Katsestend kettsae sisselöigetele vastupidavuse katsetamiseks

Protective clothing for users of hand-held chainsaws - Part 1: Test rig for testing resistance to cutting by a chainsaw (ISO 11393-1:2018)

Selles dokumendis on kirjeldatud katsestendi, mille abil hinnatakse kaitseriietuse, -jalatsite ja -kinnaste lõikekindlust käskettsae lõigete suhtes. Lisaks on kirjeldatud kalibreerimismenetodit.

EVS-EN ISO 11393-2:2019

Käskettsaagide kasutajate kaitseriietus. Osa 2: Toimivusnõuded ja katsemeetodid jalgade kaitsevahenditele

Protective clothing for users of hand-held chainsaws - Part 2: Performance requirements and test methods for leg protectors (ISO 11393-2:2018)

Dokumendis on täpsustatud käskettsaagide sisselöikamise eest kaitsmiseks mõeldud jalgade kaitsevahendite toimivusnõuded, katsemeetodid, disainilahenduse nõuded, tuvastamist võimaldav teave ja märgistused.

EVS-EN ISO 11732:2005

Vee kvaliteet. Ammoniumlämmastiku määramine. Meetod pidevvooluanalüüs (CFA ja FIA) ja spektromeetrilise detekteerimisega

Water quality - Determination of ammonium nitrogen - Method by flow analysis (CFA and FIA) and spectrometric detection (ISO 11732:2005)

See rahvusvaheline standard täpsustab meetodid, mis sobivad ammoniumlämmastiku määramiseks eri veeliikides (nagu põhja-, joogi-, pinna- ja heitvees) massikontsentraatsiooni vahemikus 0,1 mg/l kuni 10 mg/l (lahjendamata proovis), kasutades kas FIA (peatükk 3) või CFA (peatükk 4) meetodit. Mõningatel juhtudel võib rakendusulatust kohandada katse tingimusi muutes.

EVS-EN ISO 12354-3:2017

Ehitusakustika. Hoonete akustilise toimivuse hindamine elementide akustilise toime põhjal.

Osa 3: Õhuheli isolatsioon välismüra vastu

Building acoustics - Estimation of acoustic performance of buildings from the performance of elements - Part 3: Airborne sound insulation against outdoor sound (ISO 12354-3:2017)

See dokument käsitteb arvutusmuodelit, mis on mõeldud fassaadi või hoone teiste välispiirete heliosolatsiooni või helirõhutasemete vahede hindamiseks. Arvutus põhineb fassaadi konstruktsiooni kuuluvate erinevate elementide heliosolatsiooniindeksil ning hõlmab nii otsest kui ka kaudset ülekannet. Arvutuste tulemused on ligikaudses vastavuses standardi ISO 16283-3 kohaselt tehtud välimõõtmiste tulemustega. Arvutusi võib teha nii sagekusribadele kui ka ühearvuliste näitajate leidmiseks. Arvutustulemusi võib kasutada ka näiteks liikluse hetkväärtusest põhjustatud helirõhutaseme arvutamiseks sisseruumides (vt lisa E). See dokument kirjeldab arvutusmuodeli põhimõtteid, loetleb asjakohased suurused ja määratleb nende rakendusvõimalused ja -piirangud.

EVS-EN ISO 14025:2010

Keskkonnamärgised ja -teatised. III tüüpi keskkonnateatised. Põhimõtted ja protseduurid

Environmental labels and declarations - Type III environmental declarations - Principles and procedures (ISO 14025:2006)

See rahvusvaheline standard kehtestab põhimõtted ja määratleb protseduurid III tüüpi keskkonnateatiste programmide ja III tüüpi keskkonnateatiste väljatöötamiseks. See kehtestab konkreetselt standardisarja ISO 14040 standardite kasutamise III tüüpi keskkonnateatiste programmide ja III tüüpi keskkonnateatiste väljatöötamisel. See rahvusvaheline standard kehtestab keskkonnateabe kasutamise põhimõtted lisaks standardis ISO 14020 sätestatule. Selles rahvusvahelises standardis kirjeldatud III tüüpi keskkonnateatised on mõeldud peamiselt ettevõtetevaheliseks suhtuseks, kuid pole välistatud nende kasutamine teatavatel tingimustel ettevõtte ja tarbijaga vahelises suhtuses. See rahvusvaheline standard ei asenda ega muuda mingil viisil seadusega nõutavat keskkonnateavet, väiteid ega märgistust ega muid kehtivaid juriidilisi nõudeid. See rahvusvaheline standard ei sisalda sektoripõhiseid sätteid, mida võidakse käsitleda teistes ISO dokumentides. Eeldatakse, et sektoripõhised sätted muudes III tüüpi keskkonnateatistega seotud ISO dokumentides põhinevad selle rahvusvahelise standardi põhimõttel ja protseduuridel ning kasutavad neid.

EVS-EN ISO 14040:2006+A1:2020

Keskkonnajuhtimine. Olelusringi hindamine. Põhimõtted ja raamistik

Environmental management - Life cycle assessment - Principles and framework (ISO 14040:2006 + ISO 14040:2006/Amd 1:2020)

See rahvusvaheline standard kirjeldab olelusringi hindamise (LCA) põhimõtteid ja raamistikku, hõlmates a) LCA eesmärgi ja käsitlusala määratlemist, b) olelusringi inventuuranalüüs (LCI), c) olelusringi möju hindamist (LCIA), d) olelusringi möju tõlgendamist, e) LCA aruandlust ja kriitilist ülevaatust, f) LCA piiranguid, g) LCA etappide seoseid ning h) väärushinnangute ja

vabatahtlike elementide kasutustingimusi. See rahvusvaheline standard katab nii olelusringi hindamist (LCA) kui ka olelusringi inventuuruuringuuid (LCI). See ei kirjelda LCA töövahendit detailiselt ega täpsustada LCA eri etappide metoodikat. LCA või LCI tulemuste plaanitav kasutusala täpsustatakse eesmärgi ja käsitlusala määratlemisel, kuid uuringu kasutus kui selline on väljaspool selle rahvusvahelise standardi käsitlusala. See rahvusvaheline standard ei ole mõeldud kasutamiseks lepinguna või õigusaktina ega registreerimiseks ja sertifitseerimiseks.

EVS-EN ISO 15223-1:2021

Meditsiiniseadmed. Tootjainfos kasutatavad tingmärgid. Osa 1: Üldnöuded

Medical devices - Symbols to be used with information to be supplied by the manufacturer - Part 1: General requirements (ISO 15223-1:2021)

Selles dokumendis kirjeldatakse tingmärke, mida kasutatakse meditsiiniseadme kohta antud teabe väljendamiseks. See dokument on kohaldatav tingmärkidele, mida kasutatakse kogu maailmas saada olevate ja erinevate regulatiivsete nõuete järgimist vajavate meditsiiniseadmete laias valdkonnas. Neid tingmärke on võimalik kasutada kas meditsiiniseadmel endal, selle pakendil või kaasnevas infos. Selle dokumendi nöuded ei ole mõeldud kohaldamiseks muudes standardites kirjeldatud tingmärkidele.

EVS-EN ISO 16283-1:2014+A1:2017

Akustika. Heliisolatsiooni mõõtmise hoonetes ja hoone osadel. Osa 1: Õhuheli isolatsioon

Acoustics - Field measurement of sound insulation in buildings and of building elements - Part 1: Airborne sound insulation (ISO 16283-1:2014 + ISO 16283-1:2014/Amd 1:2017)

Selles standardi ISO 16283 osas määratatakse meetodid õhuheli isolatsiooni mõõtmiseks helirõhu abil hoone kahe ruumi vahel. Need meetodid on ette nähtud ruumidele ruumalaga 10 m³ kuni 250 m³ sagedusulgas 50 Hz kuni 5000 Hz. Mõõtmistulemused kehtivad möbleerimata või möbleeritud ruumide õhuheli isolatsiooni määramisel, hindamisel ja võrdlemisel, kus helivälja võib võrrelda hajutatud või hajutamata väljaga. Mõõdetud õhuheli isolatsioon sõltub sagedusest ja seda saab teisendada ühearvuliseks suuruseks kasutades standardis ISO 717-1 esitatud meetodit.

EVS-EN ISO 3834-1:2021

Metallide sulakeevituse kvaliteedinöuded. Osa 1: Sobiva kvaliteedinõuete taseme valiku kriteeriumid

Quality requirements for fusion welding of metallic materials - Part 1: Criteria for the selection of the appropriate level of quality requirements (ISO 3834-1:2021)

See dokument määratleb ISO 3834 standardisarja üldkirjelduse ja kriteeriumid, mida tuleb arvesse võtta asjakohase metallide sulakeevituse kvaliteedinõuete taseme valikul kolme taseme vahel, mis on määratletud standardites ISO 3834-2, ISO 3834-3 ja ISO 3834-4. Standardit saab rakendada tootmisel nii töökajatingimustes kui ka ehitusplatsidel. See dokument ei määratle nõudeid täielikule kvaliteediühitmissüsteemile (QMS). Siiski identifitseerib peatükki 6 kvaliteediühitmissüsteemi elemendid, mille lisamine täiendab ISO 3834 standardisarja.

EVS-ISO 5667-10:2021

Vee kvaliteet. Proovivõtt. Osa 10: Juhised reoveest ja heitveest proovide võtmiseks

Water quality - Sampling - Part 10: Guidance on sampling of waste water (ISO 5667-10:2020)

See dokument esitab olme- ja tööstusreovee proovivõtu põhimõtted, st proovivõtuplaani koostamine ja proovivõtumeetodid. See dokument hõlmab reovett kõikides vormides, st tööstusreovesi, radioaktiivne reovesi, jahutusvesi, toor- ja puastatud olmereovesi. Selles dokumendis käsitletakse erinevaid kasutatavaid proovivõtumeetodeid ja rakendatavaid reegleid, et tagada proovide esinduslikkus. Dokument ei hõlma proovivõttu õnnetusjuhtumite ja avariide korral, kuid teatud juhtudel võib kohaldada selles dokumendis kirjeldatud proovivõtumeetodeid.

STANDARDIPEALKIRJADE MUUTMINE

Selles jaotises avaldame infot Eesti standardite eesti- ja ingliskeelsete pealkirjade muutmise kohta ja ingliskeelsete pealkirjade tõlkimise kohta.
