13 KESKKONNA- JA TERVISEKAITSE. OHUTUS

EVS-EN 1366-3:2022

Fire resistance tests for service installations - Part 3: Penetration seals

This Part of EN 1366 specifies a method of test and criteria for the evaluation (including field of application rules) of the ability of a penetration seal to maintain the fire resistance of a separating element at the position at which it has been penetrated by a service. Penetration seals used to seal gaps around chimneys, air ventilation systems, fire rated ventilation ducts, fire rated service ducts, shafts and smoke extraction ducts are excluded from this standard except for mixed penetration seals. The fire resistance of those services itself cannot be assessed with the methods described in this standard. Supporting constructions are used in this standard to represent separating elements such as walls or floors. These simulate the interaction between the test specimen and the separating element into which the sealing system is to be installed in practice. This European Standard is used in conjunction with EN 1363-1. The purpose of this test described in this standard is to assess: a) the effect of such penetrations on the integrity and insulation performance of the separating element concerned; b) the integrity and insulation performance of the penetration seal; c) the insulation performance of the penetrating service or services, and where necessary, the integrity failure of a service. No information can be implied by the test concerning the influence of the inclusion of such penetrations and sealing systems on the loadbearing capacity of the separating element. It is not the intention of this test to provide quantitative information on the rate of leakage of smoke and/or hot gases or on the transmission or generation of fumes. Such phenomena are only to be noted in describing the general behaviour of test specimens during the test. This test is not intended to supply any information on the ability of the penetration seal to withstand stress caused by movements or displacements of the penetrating services.

EVS-EN 60335-2-21:2021+A1:2021

Majapidamis- ja muud taolised elektriseadmed. Ohutus. Osa 2-21: Erinõuded salvestus-veesoojenditele

Household and similar electrical appliances - Safety - Part 2-21: Particular requirements for storage water heaters (IEC 60335-2-21:2012, modified + COR1:2013 + IEC 60335-2-21:2012/A1:2018)

This clause of Part 1 is replaced by the following. This International Standard deals with the safety of electric storage water heaters for household and similar purposes and intended for heating water below boiling temperature, their rated voltage being not more than 250 V for single-phase appliances and 480 V for other appliances. Appliances not intended for normal household use but which nevertheless may be a source of danger to the public, such as appliances intended to be used by laymen in shops, in light industry and on farms, are within the scope of this standard. This standard is also applicable to immersion heater units intended to be retrofitted in a heat exchange closed water heater having provision for retrofitting. Such a unit shall comply with the requirements in Annex AA. This document deals with the reasonably foreseeable hazards presented by appliances and machines that are encountered by all persons. However, in general, it does not take into account: • children playing with the appliance; • the use of the appliance by very young children; It is recognized that very vulnerable people may have needs beyond the level addressed in this document. NOTE 101 Attention is drawn to the fact that – for appliances intended to be used in vehicles or on board ships or aircraft, additional requirements may be necessary; – in many countries additional requirements are specified by the national health authorities, the national authorities responsible for the protection of labour and similar authorities; – in many countries regulations exist for the installation of equipment connected to the water mains. NOTE 102 This standard does not apply to – appliances for boiling water (IEC 60335-2-15); – instantaneous water heaters (IEC 60335-2-35); – commercial dispensing appliances and vending machines (IEC 60335-2-75); – appliances intended exclusively for industrial purposes; – appliances intended to be used in locations where special conditions prevail, such as the presence of a corrosive or explosive atmosphere (dust, vapour or gas).

Majapidamis- ja muud taolised elektriseadmed. Ohutus. Osa 2-41: Erinõuded pumpadele

Household and similar electrical appliances - Safety - Particular requirements for pumps (IEC 60335-2-41:2012)

This clause of Part 1 is replaced by the following. This International Standard deals with the safety of electric pumps for liquids having a temperature not exceeding 90 °C, intended for household and similar purposes, their rated voltage being not more than 250 V for single-phase appliances and 480 V for other appliances. NOTE 101 Examples of appliances within the scope of this standard are – aquarium pumps; – pumps for garden ponds; – shower-boost pumps; – sludge pumps; – submersible pumps; – table fountain pumps; – vertical wet pit pumps. NOTE Z101 Battery-operated appliances and other d.c. supplied appliances are within the scope of this standard. Dual supply appliances, either mains-supplied or battery-operated, are regarded as battery-operated appliances when operated in the battery mode. NOTE Z102 Examples of appliance for household environment are appliances for typical housekeeping functions used in the household environment and appliances for typical

housekeeping functions used by non-expert users: – in shops, offices and other similar working environments; – in farm houses; – by clients in hotels, motels and other residential type environments; – in bed and breakfast type environments. NOTE Z103 Household environment includes the dwelling and its associated buildings, the garden, etc. Appliances and machines intended to be used by trained users in shops, in light industry and on farms, and appliances and machines which are declared to be for commercial use are within the scope of this document. Additional requirements for such appliances are given in Annex ZE. NOTE Z104 The statement from the manufacturer in the product information concerning the specific product is considered to determine the intended use of the appliance. The statement shall accurately reflect the reasonably foreseeable use of the product. This standard deals with the reasonably foreseeable hazards presented by appliances and machines that are encountered by all persons. However, in general, it does not take into account children playing with the appliances and vulnerable people. It does not take into account the use of the following appliances by children and vulnerable people: – Pumps for which annex ZE is applicable - sludge pumps; - vertical wet pit pumps; - deep well pumps; - submersible pumps It does not take into account the use of the following appliances by young children: – garden pond pumps; – shower-boost pumps; It does not take into account the use of the following appliances by very young children: – shower-boost pumps; – aquarium pumps; – Table fountain pumps. It is recognised that very vulnerable people may have needs beyond the level addressed in this document. NOTE 102 Attention is drawn to the fact that – for appliances intended to be used in vehicles or on board ships or aircraft, additional requirements can be necessary; – in many countries additional requirements are specified by the national health authorities, the national authorities responsible for the protection of labour and similar authorities. NOTE 103 This standard does not apply to – stationary circulation pumps for heating and service water installations (IEC 60335-2-51); – pumps for flammable liquids; – pumps intended exclusively for industrial purposes; – pumps intended to be used in locations where special conditions prevail, such as the presence of a corrosive or explosive atmosphere (dust, vapour or gas); – pumps incorporating chlorinators of the electrolytic type. NOTE 104 Pumps incorporated in appliances are not covered by this standard unless a specific reference is made.

17 METROLOOGIA JA MÕÖTMINE. FÜÜSIKALISED NÄHTUSED

EVS-EN IEC 61557-12:2022

Elektriohutus madalpingevõrkudes vahelduvpingega kuni 1000 V ja alalispinglega kuni 1500 V. Kaitsesüsteemide katsetus-, mõõte- ja seireseadmed. Osa 12: Talitluse mõõte- ja seireseadmed
Electrical safety in low voltage distribution systems up to 1 000 V AC and 1 500 V DC -
Equipment for testing, measuring or monitoring of protective measures - Part 12: Power
metering and monitoring devices (PMD)

IEC 61557-12:2018 specifies requirements for power metering and monitoring devices (PMD) that measure and monitor the electrical quantities within electrical distribution systems, and optionally other external signals. These requirements also define the performance in single- and three-phase AC or DC systems having rated voltages up to 1 000 V AC or up to 1 500 V DC. These devices are fixed or portable. They are intended to be used indoors and/or outdoors. Power metering and monitoring devices (PMD), as defined in this document, give additional safety information, which aids the verification of the installation and enhances the performance of the distribution systems. The power metering and monitoring devices (PMD) for electrical parameters described in this document are used for general industrial and commercial applications. This document does not address functional safety and cyber security aspects. This document is not applicable for: – electricity metering equipment that complies with IEC 62053-21, IEC 62053-22, IEC 62053-23 and IEC 62053-24. Nevertheless, uncertainties defined in this document for active and reactive energy measurement are derived from those defined in IEC 62053 (all parts); – the measurement and monitoring of electrical parameters defined in IEC 61557-2 to IEC 61557-9 and IEC 61557-13 or in IEC 62020; – power quality instrument (PQI) according IEC 62586 (all parts); – devices covered by IEC 60051 (all parts) (direct acting analogue electrical measuring instrument). IEC 61557-12:2018 cancels and replaces the first edition published in 2007. This edition constitutes a technical revision. This edition includes the following significant technical changes with respect to the previous edition: a) PMD-A has been withdrawn due the fact these devices are now mainly covered by the IEC 62586 series of standards. b) Three categories of PMD have been created with a list of minimum required functions for each category. c) Added a new Annex A explaining the different applications linked to the relevant standards and devices, and another new Annex C about the power factor conventions.

Electrical safety in low voltage distribution systems up to 1 000 V AC and 1 500 V DC -
Equipment for testing, measuring or monitoring of protective measures - Part 12: Power
metering and monitoring devices (PMD)

This part of IEC 61557 specifies requirements for power metering and monitoring devices (PMD) that measure and monitor the electrical quantities within electrical distribution systems, and optionally other external signals. These requirements also define the performance of PMD in single- and three-phase AC or DC systems having rated voltages up to 1000 V AC or up to 1500 V DC. These devices are fixed or portable. They are intended to be used indoors and/or outdoors. Power metering and monitoring devices (PMD), as defined in this document, give additional safety information, which aids the verification of the installation and enhances the performance of the distribution systems. Additionally, this document specifies requirements for measurement functions dedicated to metering and monitoring of electrical parameters called power metering and monitoring function (PMF)

which can be embedded in equipment (EMPF) that is not classified as PMD and for which the main function is not power metering and monitoring. Requirements for power metering and monitoring function (PMF) and additional requirements for equipments embedding power metering and monitoring function (EMPF) are described in Annex H. The power metering and monitoring devices (PMD) for electrical parameters described in this document are used for general industrial and commercial applications. This document does not address functional safety and cyber security aspects. This document is not applicable to: - electricity metering equipment that complies with IEC 62053-21, IEC 62053-22, IEC 62053-23 and IEC 62053-24. Nevertheless, uncertainties defined in this document for active and reactive energy measurement are derived from those defined in IEC 62053 (all parts); - the measurement and monitoring of electrical parameters defined in IEC 61557-2 to IEC 61557-9 and IEC 61557-13 or in IEC 62020; - power quality instrument (PQI) according IEC 62586 (all parts); - devices covered by IEC 60051 (all parts) (direct acting analogue electrical measuring instrument). Note 1 Generally such types of devices are used in the following applications or for the following general needs: - energy management inside the installation, such as facilitating the implementation of documents such as ISO 50001 and IEC 60364-8-1; - monitoring and/or measurement of electrical parameters; - measurement and/or monitoring of the quality of energy inside commercial/industrial installations. Note 2 A measuring and monitoring device of electrical parameters usually consists of several functional modules. All or some of the functional modules are combined in one device. Examples of functional modules are: - measurement and monitoring of several electrical parameters simultaneously; - energy measurement and/or monitoring, as well as sometimes compliance with aspects of building regulations; - alarms functions; - demand side quality (current and voltage harmonics, over/under voltages, voltage dips and swells, etc.). Note 3 PMD are historically called power meter, power monitor, power monitor device, power energy monitoring device, power analyser, multifunction meter, measuring multifunction equipment, energy meters. Note 4 Metering, measuring and monitoring applications are explained in Annex A.

EVS-EN ISO 15874-3:2013+A1+A2:2021

Plastics piping systems for hot and cold water installations - Polypropylene (PP) - Part 3: Fittings (ISO 15874-3:2013 + ISO 15874-3:2013/Amd 1:2018 + ISO 15874-3:2013/Amd 2:2021)

This part of ISO 15874 specifies the characteristics of fittings for polypropylene (PP) piping systems intended to be used for hot and cold water installations within buildings for the conveyance of water, whether or not intended for human consumption (domestic systems) and for heating systems under design pressures and temperatures according to the class of application

(see ISO 15874-1:2013, Table 1). It covers a range of service conditions (application classes) and design pressure classes. For values of TD, Tmax and Tmal in excess of those in Table 1 of ISO 15874-1:2013 do not apply. NOTE It is the responsibility of the purchaser or specifier to make the appropriate selections from these aspects, taking into account their particular requirements and any relevant national regulations and installation practices or codes. It also specifies the parameters for the test methods referred to in this part of ISO 15874. In conjunction with the other parts of ISO 15874, this part of ISO 15874 is applicable to fittings made from PP and to fittings made from other materials which are intended to be fitted to pipes conforming to ISO 15874-2 for hot and cold water installations, whereby the joints conform to the requirements of ISO 15874-5. This part of ISO 15874 is applicable to fittings of the following types: — socket fusion fittings; — electro fusion fittings; — mechanical fittings; — fittings with incorporated inserts. It is also applicable to fittings made from alternative materials which when fitted to pipes conforming to ISO 15874-2, conform to the requirements of ISO 15874-5.

65 PÖLLUMAJANDUS

EVS-EN ISO 4254-1:2015+A1:2021

Pöllumajandusmasinad. Ohutus. Osa 1: Üldnõuded

Agricultural machinery - Safety - Part 1: General requirements (ISO 4254-1:2013 + ISO 4254-1:2013/Amd 1:2021)

This part of ISO 4254 specifies the safety requirements and the means of their verification for the design and construction of self-propelled ride-on machines, mounted, semi-mounted and trailed machines used in agriculture in order to deal with the hazards which are typical for most of the machines. In addition, it specifies the type of information on safe working practices including information about residual risks to be provided by the manufacturer. This document deals with significant hazards, hazardous situations and events, as listed in Annex A, relevant to this agricultural machinery when used as intended and under the conditions of misuse foreseeable by the manufacturer during normal operation and service. This part of ISO 4254 is not applicable to — agricultural or forestry tractors, — aircraft and air-cushion vehicles used in agriculture, — lawn and garden equipment, — machine-specific components or functions (e.g. working tools and/or processes), — machine-specific performance levels (PL or AgPL). NOTE Machine-specific standards can give the required PL or AgPL. This part of ISO 4254 is not applicable to hazards related to periodic service, machine conversion and repairs intended to be carried out by professional service personnel, environmental hazards, road safety (e.g. steering, braking), or to the power take-off (PTO) drive shaft; neither is it applicable to guards of moving parts for power transmission except for strength requirements for guards and barriers. This part of ISO 4254 is not applicable to machines which are manufactured before the date of its publication. Not all of the hazards dealt with by this part of ISO 4254 are necessarily present on a particular machine. A risk assessment should be carried out by the manufacturer to determine the hazards that are applicable and any hazards in addition to those dealt with by this part or a relevant machine-specific part. The requirements of a machine-specific part of ISO 4254 take precedence over the requirements of this part.

67 TOIDUAINETE TEHNOLOGIA

ISO/TS 22002-4:2013 et

Toiduohutuse eeltingimusprogrammid. Osa 4: Toidupakendite tootmine

Prerequisite programmes on food safety - Part 4: Food packaging manufacturing (ISO/TS 22002-4:2013)

See tehniline spetsifikatsioon määrab kindlaks nõuded eeltingimusprogrammide (ETP) sisseseadmiseks, elluviiimiseks ja toimivana hoidmiseks, et aidata ohjata toiduohutuse ohte toidupakendite valmistamisel. See tehniline spetsifikatsioon on kohaldatav kõikidele organisatsioonidele, mis toodavad toidupakendeid ja/või pooltooteid, olenevata nende suurusest või keerukusest. See tehniline spetsifikatsioon ei ole loodud ega mõeldud kasutamiseks toiduainete tarneahela muudes osades või tegevustes. MÄRKUS 1 Organisatsioon, mis toodab ise oma toidupakendeid (nt pudelite isepuhumine ja aseptiliste karpide/kottide vormimine/täitmine/sulgemine), võib otsustada, kas seda tehnilist spetsifikatsiooni tuleks kohaldada või mitte. Toidupakendeid tootvad organisatsioonid on oma olemuselt mitmekesised ning kõik selles tehnilises spetsifikatsioonis toodud nõuded ei kohaldu üksikule organisatsioonile. Iga organisatsioon peab läbi viima dokumenteeritud toiduohutuse ohuanalüüsiga, mis hõlmab iga nõuet. Kui tehakse erandeid või rakendatakse alternatiivseid meetmeid, tuleb neid põhjendada toiduohutuse ohuanalüüsiga. See tehniline spetsifikatsioon ei ole juhtimissüsteemi standard ja on mõeldud kasutamiseks toidupakendeid tootvatele organisatsioonidele, kes soovivad rakendada ETP-sid viisil, mis vastab ISO 22000 nõuetele. See tehniline

spetsifikatsioon on ette nähtud kasutamiseks koos standardiga ISO 22000. MÄRKUS 2 Selles tehnilises spetsifikatsioonis hõlmab termin toit ka jooke.

Toiduohutuse eeltingimusprogrammid. Osa 5: Transport ja ladustamine

Prerequisite programmes on food safety - Part 5: Transport and storage (ISO/TS 22002-5:2019)

See dokument määrab kindlaks nõuded toiduahelas transpordi ja ladustamise eeltingimusprogrammide (ETP) sisseseadmiseks, elluviimiseks ja toimivana hoidmiseks, et aidata ohjata toiduohutuse ohte. See dokument on kohaldatav kõikidele organisatsioonidele, olenevata suurusest või keerukusest, mis tegelevad transpordi ja ladustamisega kogu toiduainete tarneahelas ning soovivad ellu viia ETP-sid nii, et need vastaksid ISO 22000 nõuetele. See dokument ei ole koostatud ega mõeldud kasutamiseks toiduainete tarneahela teistes osades või eraldi. Selles dokumendis on transport ja ladustamine kooskõlas ISO/TS 22003:2013 lisa A kategooriaga G. See dokument hõlmab kõiki toiduaineid ja söödatooteid ning toidupakendeid ja pakkematerjale. Elusloomad ei kuulu selle dokumendi käsitlusalaasse, välja arvatud juhul, kui need on mõeldud otsetarbitimiseks, nt molluskid, koorikloomad ja elus kalad.

91 EHITUSMATERJALID JA EHITUS

EVS-EN 60335-2-21:2021+A1:2021

Majapidamis- ja muud taolised elektriseadmed. Ohutus. Osa 2-21: Erinõuded salvestus-veesoojenditele

Household and similar electrical appliances - Safety - Part 2-21: Particular requirements for storage water heaters (IEC 60335-2-21:2012, modified + COR1:2013 + IEC 60335-2-21:2012/A1:2018)

This clause of Part 1 is replaced by the following. This International Standard deals with the safety of electric storage water heaters for household and similar purposes and intended for heating water below boiling temperature, their rated voltage being not more than 250 V for single-phase appliances and 480 V for other appliances. Appliances not intended for normal household use but which nevertheless may be a source of danger to the public, such as appliances intended to be used by laymen in shops, in light industry and on farms, are within the scope of this standard. This standard is also applicable to immersion heater units intended to be retrofitted in a heat exchange closed water heater having provision for retrofitting. Such a unit shall comply with the requirements in Annex AA. This document deals with the reasonably foreseeable hazards presented by appliances and machines that are encountered by all persons. However, in general, it does not take into account: • children playing with the appliance; • the use of the appliance by very young children; It is recognized that very vulnerable people may have needs beyond the level addressed in this document. NOTE 101 Attention is drawn to the fact that – for appliances intended to be used in vehicles or on board ships or aircraft, additional requirements may be necessary; – in many countries additional requirements are specified by the national health authorities, the national authorities responsible for the protection of labour and similar authorities; – in many countries regulations exist for the installation of equipment connected to the water mains. NOTE 102 This standard does not apply to – appliances for boiling water (IEC 60335-2-15); – instantaneous water heaters (IEC 60335-2-35); – commercial dispensing appliances and vending machines (IEC 60335-2-75); – appliances intended exclusively for industrial purposes; – appliances intended to be used in locations where special conditions prevail, such as the presence of a corrosive or explosive atmosphere (dust, vapour or gas).

Plastics piping systems for hot and cold water installations - Polypropylene (PP) - Part 3: Fittings (ISO 15874-3:2013 + ISO 15874-3:2013/Amd 1:2018 + ISO 15874-3:2013/Amd 2:2021)

This part of ISO 15874 specifies the characteristics of fittings for polypropylene (PP) piping systems intended to be used for hot and cold water installations within buildings for the conveyance of water, whether or not intended for human consumption (domestic systems) and for heating systems under design pressures and temperatures according to the class of application (see ISO 15874-1:2013, Table 1). It covers a range of service conditions (application classes) and design pressure classes. For values of TD, Tmax and Tmal in excess of those in Table 1 of ISO 15874-1:2013 do not apply. NOTE It is the responsibility of the purchaser or specifier to make the appropriate selections from these aspects, taking into account their particular requirements and any relevant national regulations and installation practices or codes. It also specifies the parameters for the test methods referred to in this part of ISO 15874. In conjunction with the other parts of ISO 15874, this part of ISO 15874 is applicable to fittings made from PP and to fittings made from other materials which are intended to be fitted to pipes conforming to ISO 15874-2 for hot and cold water installations, whereby the joints conform to the requirements of ISO 15874-5. This part of ISO 15874 is applicable to fittings of the following types: — socket fusion fittings; — electro fusion fittings; — mechanical fittings; — fittings with incorporated inserts. It is also applicable to fittings made from alternative materials which when fitted to pipes conforming to ISO 15874-2, conform to the requirements of ISO 15874-5.

EVS-EN IEC 60335-2-41:2021+A11:2021

Majapidamis- ja muud taolised elektriseadmed. Ohutus. Osa 2-41: Erinõuded pumpadele Household and similar electrical appliances - Safety - Particular requirements for pumps (IEC 60335-2-41:2012)

This clause of Part 1 is replaced by the following. This International Standard deals with the safety of electric pumps for liquids having a temperature not exceeding 90 °C, intended for household and similar purposes, their rated voltage being not more than 250 V for single-phase appliances and 480 V for other appliances. NOTE 101 Examples of appliances within the scope of this standard are – aquarium pumps; – pumps for garden ponds; – shower-boost pumps; – sludge pumps; – submersible pumps; – table fountain pumps; – vertical wet pit pumps. NOTE Z101 Battery-operated appliances and other d.c. supplied appliances are within the scope of this standard. Dual supply appliances, either mains-supplied or battery-operated, are regarded as battery-operated appliances when operated in the battery mode. NOTE Z102 Examples of appliance for household environment are appliances for typical housekeeping functions used in the household environment and appliances for typical housekeeping functions used by non-expert users: – in shops, offices and other similar working environments; – in farm houses; – by clients in hotels, motels and other residential type environments; – in bed and breakfast type environments. NOTE Z103 Household environment includes the dwelling and its associated buildings, the garden, etc. Appliances and machines intended to be used by trained users in shops, in light industry and on farms, and appliances and machines which are declared to be for commercial use are within the scope of this document. Additional requirements for such appliances are given in Annex ZE. NOTE Z104 The statement from the manufacturer in the product information concerning the specific product is considered to determine the intended use of the appliance. The statement shall accurately reflect the reasonably foreseeable use of the product. This standard deals with the reasonably foreseeable hazards presented by appliances and machines that are encountered by all persons. However, in general, it does not take into account children playing with the appliances and vulnerable people. It does not take into account the use of the following appliances by children and vulnerable people: – Pumps for which annex ZE is applicable - sludge pumps; - vertical wet pit pumps; - deep well pumps; - submersible pumps It does not take into account the use of the following appliances by young children: – garden pond pumps; – shower-boost pumps; It does not take into account the use of the following appliances by very young children: – shower-boost pumps; – aquarium pumps; – Table fountain pumps. It is recognised that very vulnerable people may have needs beyond the level addressed in this document. NOTE 102 Attention is drawn to the fact that – for appliances intended to be used in vehicles or on board ships or aircraft, additional requirements can be necessary; – in many countries additional requirements are specified by the national health authorities, the national authorities responsible for the protection of labour and similar authorities. NOTE 103 This standard does not apply to – stationary circulation pumps for heating and service water installations (IEC 60335-2-51); – pumps for flammable liquids; – pumps intended exclusively for industrial purposes; – pumps intended to be used in locations where special conditions prevail, such as the presence of a corrosive or explosive atmosphere (dust, vapour or gas); – pumps incorporating chlorinators of the electrolytic type. NOTE 104 Pumps incorporated in appliances are not covered by this standard unless a specific reference is made.

STANDARDIKAVANDITE ARVAMUSKÜSITLUS

Selleks, et tagada standardite vastuvõtmise, järgides konsensuse põhimõtteid, peab standardite vastuvõtmisele eelnema standardikavandite avalik arvamusküsitlus, milleks ettenähtud perioodi jooksul (üldjuhul 60 päeva) on asjast huvitatui võimalik tutvuda standardikavanditega, esitada kommentaare ning teha ettepanekuid parandusteks. Eriti on oodatud teave, kui rahvusvahelist või Euroopa standardikavandit ei peaks vastu võtma Eesti standardiks (vastuolu Eesti õigusaktidega, pole Eestis rakendatav jt põhjustel).

Arvamusküsitlusele esitatakse Euroopa ja rahvusvahelised standardikavandid, mis on kavas üle võtta Eesti standarditeks, ja Eesti algupärased standardikavandid ning algupäraste tehniliste spetsifikatsioonide ja juhendite kavandid.

Iga arvamusküsitlusel oleva kavandi kohta on esitatud alljärgnev informatsioon:

- tähis;
- pealkiri;
- käsitusala;
- keel (en = inglise; et = eesti);
- Euroopa või rahvusvahelise alusdokumendi tähis, selle olemasolul;
- asendusseos, selle olemasolul;
- arvamuste esitamise tähtaeg.

Kavanditega saab tutvuda ja kommentaare esitada Eesti Standardimis- ja Akrediteerimiskeskuse veebilehel asuvas kommenteerimisportaalil: <https://www.evs.ee/kommenteerimisportaal/>

Igal kuul uuendatav teave eestikeelsena avaldatavate Eesti standardite kohta, sh eeldatavad kommenteerimise ja avaldamise tähtpäevad, on leitav Eesti Standardimis- ja Akrediteerimiskeskuse veebilehel avaldatavast standardimisprogrammist.

Determination of certain substances in electrotechnical products - Part 12: Simultaneous determination - Polybrominated biphenyls, polybrominated diphenyl ethers and phthalates in polymers by gas chromatography-mass spectrometry

This part of IEC 62321 specifies one normative extraction and measurement technique for simultaneous determination of polybrominated biphenyls, polybrominated diphenyl ethers, and four phthalates (di-isobutyl phthalate (DIBP), di-n-butyl phthalate (DBP), benzylbutyl phthalate (BBP), di-(2-ethylhexyl) phthalate (DEHP)) in polymers of electrotechnical products. Ultrasonic-assisted extraction is described for simultaneous extraction for sample preparation in this document. Gas chromatography-mass spectrometry (GC-MS) is considered the normative technique for measurement of simultaneous determination of the analytes in range of 25 mg/kg to 2 000 mg/kg. This test method has been evaluated by the test of PP, PVC, ABS, ACM, PS, PU and PE materials.

prEN IEC 62321-11:2022

Determination of certain substances in electrotechnical products - Part 11: Tris (2-chloroethyl) phosphate (TCEP) in plastics by gas chromatography-mass spectrometry (GC-MS) and liquid chromatography-mass spectrometry (LC-MS)

This part of IEC 62321 specifies two different techniques for the determination of TCEP tris(2-chloroethyl) phosphate (TCEP) in plastics, the GC-MS or LC-MS method; both of which are suitable for quantitative analysis. These two techniques have been evaluated for use with polyurethane, Polyvinyl chloride and polyethylene materials containing TCEP between 200 mg/kg to 2 000 mg/kg. Use of the methods escribed in International Standard for other polymers and concentration ranges has not been specifically evaluated. These test methods do not apply to plastics materials having a processing temperature higher than 230 °C. NOTE TCEP starts thermal decomposition at approximately 230 °C. Polymer types which have a processing temperature into shapes of plastics (e.g. pellets, moulded parts, or sheets etc.) not exceeding the decomposition temperature can contain TCEP. Py-TD-GC-MS is another technique, suitable for the screening of TCEP in plastics (See Annex A).

Insulation co-ordination - Part 11 : Definitions, principles and rules for HVDC system

This standard applies to High-voltage direct current (HVDC) systems. It specifies the principles on the procedures for the determination of the specified withstand voltages, creepage distance and air clearances for the equipment and the installations of these systems. This standard gives the insulation co-ordination principles related to line commutated converter (LCC) and voltage sourced converters (VSC) HVDC systems. The main principles of this standard also apply to other special converter configurations of LCC, such as the capacitor commutated converter (CCC) as well as the controlled series compensated converter (CSCC) etc. This standard applies to insulation co-ordination of equipment connected between the converter AC bus (including the AC harmonic filters, the converter transformer, the circuit breakers) and the DC line side. The line and cable terminations in so far as they influence the insulation co-ordination of converter station equipment are also covered. This standard applies only for HVDC applications in power systems and not for industrial conversion equipment. Principles and guidance given are for insulation co-ordination purposes only. The requirements for human safety are not covered by this standard. This horizontal standard is primarily intended for use by technical committees in the preparation of standards in accordance with the principles laid down in IEC Guide 108. One of the responsibilities of a technical committee is, wherever applicable, to make use of horizontal standards in the preparation of its publications. The contents of this horizontal standard will not apply unless specifically referred to or included in the relevant publications.

Installation couplers intended for permanent connection in fixed installations

This document applies to two-wire, up to five-wire installation couplers, with or without earthing contact, if provided, with a rated voltage up to and including 500 V AC or DC and a rated connecting capacity up to and including 10 mm² 248 and a rated current not exceeding 32 A for permanent connection in electrical installations. Installation couplers with additional contacts for voltages other than mains voltages are outside the scope of this document. An installation coupler consists of an installation female connector and an installation male connector for permanent connection not intended to be engaged or disengaged under load nor to be engaged or disengaged other than during first installation or during reconfiguration or maintenance of the wiring system in which installation couplers have been installed. This means that installation couplers are only intended for infrequent use. Installation couplers are not suitable for use in place of socket-outlet systems. Installation couplers are not suitable for use in place of devices for connecting luminaires (DCLs) according to IEC 61995 (all parts) or in place of luminaire supporting couplers (LSCs). Installation couplers complying with this document are suitable for use at ambient temperatures not normally exceeding +40 °C, but their average over a period of 24 h does not exceed +35 °C, with a lower limit of the ambient air temperature of -5 °C, either for indoor or outdoor use. NOTE 1 Additional tests for use in cold climates are under consideration. NOTE 2 For other temperatures, necessary information can be given in the manufacturer's installation instructions. In locations where special conditions prevail, as in ships, vehicles and the like and in hazardous locations, for example where explosions are liable to occur, special constructions can be required. NOTE 3 Installation couplers are intended to be installed by instructed or skilled persons. NOTE 4 As a guide to use installation coupler systems, see Annex D.

Determination of certain substances in electrotechnical products - Part 12: Simultaneous determination - Polybrominated biphenyls, polybrominated diphenyl ethers and phthalates in polymers by gas chromatography-mass spectrometry

This part of IEC 62321 specifies one normative extraction and measurement technique for simultaneous determination of polybrominated biphenyls, polybrominated diphenyl ethers, and four phthalates (di-isobutyl phthalate (DIBP), di-n-butyl phthalate (DBP), benzylbutyl phthalate (BBP), di-(2-ethylhexyl) phthalate (DEHP)) in polymers of electrotechnical products. Ultrasonic-assisted extraction is described for simultaneous extraction for sample preparation in this document. Gas chromatography-mass spectrometry (GC-MS) is considered the normative technique for measurement of simultaneous determination of the analytes in range of 25 mg/kg to 2 000 mg/kg. This test method has been evaluated by the test of PP, PVC, ABS, ACM, PS, PU and PE materials.

Guideline for Switching Reliability Evaluation procedures for Gallium Nitride Power Conversion Devices

This publication presents guidelines for evaluating the switching reliability of GaN power switches. It is applicable to planar enhancement-mode, depletion-mode, GaN integrated power solutions and cascode GaN power switches. It covers the following aspects: a) An approach for broad coverage, using the switching locus to represent switching stress in a standardized manner. b) The development of a lifetime model, based upon the type of application switching locus. c) The validation of reliable operation under application-use conditions. The publication will result in common methods for representing, evaluating and modeling the switching stress on GaN power switches, and ensuring their reliable operation in an application.

prEN IEC 62321-11:2022

Determination of certain substances in electrotechnical products - Part 11: Tris (2-chloroethyl) phosphate (TCEP) in plastics by gas chromatography-mass spectrometry (GC-MS) and liquid chromatography-mass spectrometry (LC-MS)

This part of IEC 62321 specifies two different techniques for the determination of TCEP tris(2-chloroethyl) phosphate (TCEP) in plastics, the GC-MS or LC-MS method; both of which are suitable for quantitative analysis. These two techniques have been evaluated for use with polyurethane, Polyvinyl chloride and polyethylene materials containing TCEP between 200 mg/kg to 2 000 mg/kg. Use of the methods escribed in International Standard for other polymers and concentration ranges has not been specifically evaluated. These test methods do not apply to plastics materials having a processing temperature higher than 230 °C. NOTE TCEP starts thermal decomposition at approximately 230 °C. Polymer types which have a processing temperature into shapes of plastics (e.g. pellets, moulded parts, or sheets etc.) not exceeding the decomposition temperature can contain TCEP. Py-TD-GC-MS is another technique, suitable for the screening of TCEP in plastics (See Annex A).

EVS-EN IEC 61000-3-2:2019/A1:2021

Elektromagnetiline ühilduvus. Osa 3-2: Piirväärtused. Vooluharmooniliste emissiooni lubatavad piirväärtused (seadmetel sisendvooluga kuni 16 A faasi kohta) Electromagnetic compatibility (EMC) - Part 3-2: Limits - Limits for harmonic current emissions (equipment input current ≤16 A per phase) (IEC 61000-3-2:2018/A1:2020)

Standardi EN IEC 61000-3-2:2019 muudatus

EVS-EN IEC 61000-3-2:2019+A1:2021

Elektromagnetiline ühilduvus. Osa 3-2: Piirväärtused. Vooluharmooniliste emissiooni lubatavad piirväärtused (seadmetel sisendvooluga kuni 16 A faasi kohta) Electromagnetic compatibility (EMC) - Part 3-2: Limits - Limits for harmonic current emissions (equipment input current ≤16 A per phase) (IEC 61000-3-2:2018 + IEC 61000-3-2:2018/A1:2020)

Standardisarja IEC 61000 see osa käsitleb üldkasutatavatesse elektritoitesüsteemidesse sisestatud vooluharmooniliste piiramist. See dokument määrab piirid sisendvoolu harmoonilistele komponentidele, mis võivad olla tekitatud kindlaksmääratud tingimustel katsetatava(te) seadme(te) poolt. Standardisarja IEC 61000 see osa on kohaldatav elektri- ja elektroonikaseadmetele, mille tunnus-sisendvool on kuni 16 A (kaasa arvatud) faasi kohta ning on mõeldud ühendamiseks avalikesse madalpinge jaotussüsteemidesse. Selle dokumendi käsitlusallasesse on kaasatud mitteprofessionaalsed kaarkeevitusseadmed tunnus-sisendvooluga kuni 16 A ühe faasi kohta. Kõik muud kaarkeevitusseadmed on selle dokumendi käsitluslast välja jäetud; harmooniliste emissiooni saab siiski hinnata, kasutades standardit IEC 61000-3-12 ja asjakohased paigalduspiiranguid. Selles dokumendis kirjeldatud katsed on tüübikatsed. Süsteemide puhul, mille nimipinge on väiksem kui 220 V, kuid mitte sellega võrdne (faas-neutraal), ei ole piire veel määratletud. MÄRKUS Selles dokumendis kasutatakse sõnu seade, seadmed, seadis ja vahend. Neil on sama tähendus selle dokumendi tähenduses.

EVS-EN ISO 11393-4:2019

Käskettsaagide kasutajate kaitseriietus. Osa 4: Kaitsekinnaste toimivusnõuded ja katsemeetodid Protective clothing for users of hand-held chainsaws - Part 4: Performance requirements and test methods for protective gloves (ISO 11393-4:2018)

Dokumendis on täpsustatud kasutajate käskettsaaga sisselöikamise eest kaitsmiseks mõeldud kinnaste toimivusnõuded, katsemeetodid, disainilahenduse nõuded, tuvastamist võimaldav teave ja märgistused. Suunised kettsae kasutamiseks ja kinnaste valimiseks on toodud lisas A.

EVS-EN ISO 11393-5:2019

Käskettsaagide kasutajate kaitseriietus. Osa 5: Kaitsesääriste toimivusnõuded ja katsemeetodid Protective clothing for users of hand-held chainsaws - Part 5: Performance requirements and test methods for protective gaiters (ISO 11393-5:2018)

Selles dokumendis on täpsustatud nõuded ja katsemeetodid sääriste käsikettsae lõigete vastase lõikekindluse ja muude omaduste hindamiseks. See sisaldb nõuet ja katsemeetodit sääriste tallarihmade tugevuse hindamiseks. Dokumenti kohaldatakse standardi ISO 20345 disainilahendusele „C“ või „D“ vastavate terasninaga kaitsejalatsitega koos kasutatavate sääriste suhtes. Need säärised on mõeldud kasutamiseks ainult koos kindlaks määratud jalatsite mudeliga ja neid peab koos kätsetama. MÄRKUS Need tooted on mõeldud kasutamiseks koos kindlaks määratud ortopeediliste jalatsite mudeliga, kuid see pole kohustuslik. Seda dokumenti ei kohaldata suure komistamishuga olukordades, näiteks puu otsa ronimisel või metsas, kasutatavate sääriste suhtes.

EVS-EN ISO 11393-6:2019

Käskettsaagide kasutajate kaitseriietus. Osa 6: Ülakeha kaitsevahendite toimivusnõuded ja katsemeetodid

Protective clothing for users of hand-held chainsaws - Part 6: Performance requirements and test methods for upper body protectors (ISO 11393-6:2018, Corrected version 2019-11)

Dokumendis on täpsustatud käskettsaagidega sisselöökamise eest kaitsmiseks mõeldud ülakeha kaitsevahendite toimivusnõuded, katsemeetodid, disainilahenduse nõuded, tuvastamist võimaldav teave ja märgistused. Lisaks täpsustatakse meetodid ülakeha kaitsevahendite näidiste valimiseks ja eeltötluseks, kaitsva pinna mõõtmiseks, seadmed ja katsemeetodid lõikekindluse ning ja praktiline toimivuskatse ergonomiliste omaduste hindamiseks. Suunised kettsae kasutamiseks ja sobivate ülakeha kaitsevahendite valimiseks on toodud lisas A.

ISO/TS 22002-4:2013 et

Toiduohutuse eeltingimusprogrammid. Osa 4: Toidupakendite tootmine

Prerequisite programmes on food safety - Part 4: Food packaging manufacturing (ISO/TS 22002-4:2013)

See tehniline spetsifikatsioon määrab kindlaks nõuded eeltingimusprogrammide (ETP) sisseseadmiseks, elluviiimiseks ja toimivana hoidmiseks, et aidata ohjata toiduohutuse ohte toidupakendite valmistamisel. See tehniline spetsifikatsioon on kohaldatav kõikidele organisatsioonidele, mis toodavad toidupakendeid ja/või pooltoteid, olenemata nende suurusest või keerukusest. See tehniline spetsifikatsioon ei ole loodud ega mõeldud kasutamiseks toiduainete tarneahela muudes osades või tegevustes. MÄRKUS 1 Organisatsioon, mis toodab ise oma toidupakendeid (nt pudelite isepuhumine ja aseptiliste karpide/kottide vormimine/täitmine/sulgemine), võib otsustada, kas seda tehnilist spetsifikatsiooni tuleks kohaldada või mitte. Toidupakendeid tootvad organisatsioonid on oma olemuselt mitmekesised ning kõik selles tehnilises spetsifikatsioonis toodud nõuded ei kohaldu üksikule organisatsioonile. Iga organisatsioon peab läbi viima dokumenteeritud toiduohutuse ohuanalüüsni, mis hõlmab iga nõuet. Kui tehakse erandeid või rakendataks alternatiivseid meetmeid, tuleb neid põhjendada toiduohutuse ohuanalüüsiga. See tehniline spetsifikatsioon ei ole juhtimissüsteemi standard ja on mõeldud kasutamiseks toidupakendeid tootvatele organisatsioonidele, kes soovivad rakendada ETP-sid viisil, mis vastab ISO 22000 nõuetele. See tehniline spetsifikatsioon on ette nähtud kasutamiseks koos standardiga ISO 22000. MÄRKUS 2 Selles tehnilises spetsifikatsioonis hõlmab termin toit ka jooke.

ISO/TS 22002-5:2019 et

Toiduohutuse eeltingimusprogrammid. Osa 5: Transport ja ladustamine

Prerequisite programmes on food safety - Part 5: Transport and storage (ISO/TS 22002-5:2019)

See dokument määrab kindlaks nõuded toiduahelas transpordi ja ladustamise eeltingimusprogrammide (ETP) sisseseadmiseks, elluviiimiseks ja toimivana hoidmiseks, et aidata ohjata toiduohutuse ohte. See dokument on kohaldatav kõikidele organisatsioonidele, olenemata suurusest või keerukusest, mis tegelevad transpordi ja ladustamisega kogu toiduainete tarneahelas ning soovivad ellu viia ETP-sid nii, et need vastaksid ISO 22000 nõuetele. See dokument ei ole koostatud ega mõeldud kasutamiseks toiduainete tarneahela teistes osades või eraldi. Selles dokumendis on transport ja ladustamine kooskõlas ISO/TS 22003:2013 lisa A kategooriaga G. See dokument hõlmab kõiki toiduaineid ja söödatooteid ning toidupakendeid ja pakkematerjale. Elusloomad ei kuulu selle dokumendi käsitlusalaasse, välja arvatud juhul, kui need on mõeldud otsetarbimiseks, nt molluskid, koorikloomad ja elus kalad.

STANDARDIPEALKIRJADE MUUTMINE

Selles jaotises avaldame infot Eesti standardite eesti- ja ingliskeelsete pealkirjade muutmise kohta ja ingliskeelsete pealkirjade tõlkimise kohta.

UUED HARMONEERITUD STANDARDID

Toote nõuetele vastavuse seaduse kohaselt avaldab Eesti Standardimis- ja Akrediteerimiskeskus oma veebilehel ja ametlikus väljaandes teavet harmoneeritud standardeid ülevõtva Eesti standardite kohta.

Harmoneeritud standardiks nimetatakse EL-i õigusaktide kontekstis Euroopa Komisjoni standardimisettepanku alusel Euroopa standardimisorganisatsioonide koostatud ja vastu võetud standardit.

Harmoneeritud standardite kasutamise korral eeldatakse enamiku vastavate õigusaktide mõistes, et standardi kohaselt valmistatud toode täidab õigusakti olulisi nõudeid ning on üldjuhul kõige lihtsam viis töendada õigusaktide oluliste nõuete täitmist. Harmoneeritud standardi täpne tähdus ja õiguslik staatus tuleneb siiski iga õigusakti tekstist eraldi ning võib õigusaktist olenevalt erineda.

Lisainfo:

<https://ec.europa.eu/growth/single-market/european-standards/harmonised-standards>

Eesti Standardimis- ja Akrediteerimiskeskus avaldab ametlikus väljaandes harmoneeritud standardeid ülevõtva Eesti standardite kohta järgmist infot:

- harmoneeritud standardi staatuse saanud Eesti standardid
- harmoneeritud standardi staatuses olevate Eesti standardite kohta avaldatud märkused ja hoiatused, mida tuleb standardite järgimisel arvestada
- harmoneeritud standardi staatuse kaotanud Eesti standardid

Info esitatakse vastavate õigusaktide kaupa.

EVS-EN ISO 11737-1:2018+A1:2021 Tervishoiutoodete steriliseerimine. Mikrobioloogilised meetodid. Osa 1: Mikroobse populatsiooni määramine toodetel	05.01.2022
EVS-EN ISO 13408-6:2021 Tervishoiutoodete aseptiline töötlemine. Osa 6: Isolaatorsüsteemid	05.01.2022
EVS-EN ISO 13485:2016 Meditiiniseadmed. Kvaliteedijuhtimissüsteemid. Normatiivsed nõuded	05.01.2022
EVS-EN ISO 13485:2016/A11:2021 Meditiiniseadmed. Kvaliteedijuhtimissüsteemid. Normatiivsed nõuded	05.01.2022
EVS-EN ISO 13485:2016+A11:2021 Meditiiniseadmed. Kvaliteedijuhtimissüsteemid. Normatiivsed nõuded	05.01.2022
EVS-EN ISO 14160:2021 Tervishoiutoodete steriliseerimine. Loomset päritolu kudesid või nende derivaate sisaldavate ühekordsete meditsiiniseadmete keemilised vedelad sterilisatsioonivahendid. Nõuded meditsiiniseadmete steriliseerimise protsessi kirjeldamisele, väljatöötamisele, valideerimisele ja rutiinsele kontrollile	05.01.2022
EVS-EN ISO 15223-1:2021 Meditiiniseadmed. Tootjainfos kasutataavad tingmärgid. Osa 1: Üldnõuded	05.01.2022
EVS-EN ISO 17664-1:2021 Tervishoiutoodete töötlemine. Meditsiiniseadme tootja esitatav teave meditsiiniseadmete töötlemiseks. Osa 1: Kriitilised ja poolkriitilised meditsiiniseadmed	05.01.2022

Direktiiv 2017/746
In vitro diagnostikameditsiiniseadmed
 Komisjoni rakendusotsus (EL) 2022/15,
 millega muudetakse rakendusotsust (EL) 2021/1195
 (EL Teataja 2022/L 04)

Harmoneeritud standardit ülevõtva Eesti standardi tähis ja pealkiri	Kuupäev, millesse Eesti standardi aluseks olevat Euroopa standardit võib rakendada harmoneeritud standardina	Viide asendatavale Euroopa standardile	Kuupäev, milleks asendatava standardi järgimisest tulenev vastavus-eeldus kaotab kehtivuse
EVS-EN ISO 11737-1:2018 Tervishoiutoodete steriliseerimine. Mikrobioloogilised meetodid. Osa 1: Mikroobse populatsiooni määramine toodetel	07.01.2022		
EVS-EN ISO 11737-1:2018/A1:2021 Tervishoiutoodete steriliseerimine. Mikrobioloogilised meetodid. Osa 1: Mikroobse populatsiooni määramine toodetel. Muudatus 1	07.01.2022		
EVS-EN ISO 11737-1:2018+A1:2021 Tervishoiutoodete steriliseerimine. Mikrobioloogilised meetodid. Osa 1: Mikroobse populatsiooni määramine toodetel	07.01.2022		

EVS-EN ISO 13408-6:2021	07.01.2022
Tervishoiutoodete aseptiline töötlemine. Osa 6:	
Isolaatorsüsteemid	
EVS-EN ISO 13485:2016	07.01.2022
Meditsiiniseadmed. Kvaliteedijuhtimissüsteemid.	
Normatiivsed nõuded
