#### Electronic fee collection - Compliance check communication for autonomous systems (ISO 12813:2024)

This document specifies requirements for short-range communication for the purposes of compliance checking in autonomous electronic fee collecting systems. Compliance checking communication (CCC) takes place between a road vehicle's on-board equipment (OBE) and an interrogator [fixed and mobile roadside equipment (RSE) or hand-held unit] and serves to establish whether the data that are delivered by the OBE correctly reflect the road usage of the corresponding vehicle according to the rules of the pertinent toll regime. The operator of the compliance checking interrogator is assumed to be part of the toll charging role as defined in ISO 17573-1. The CCC permits identification of the OBE, vehicle and contract, and verification of whether the driver has fulfilled their obligations and the checking status and performance of the OBE. The CCC reads, but does not write, OBE data. This document is applicable to OBE in an autonomous mode of operation. It is not applicable to compliance checking in dedicated short-range communication (DSRC)-based charging systems. It specifies data syntax and semantics, but not a communication sequence. All the attributes specified herein are required in any OBE claimed to be compliant with this document, even if some values are set to "not specified" in cases where a certain functionality is not present in an OBE. The interrogator is free to choose which attributes are read in the data retrieval phase, as well as the sequence in which they are read. In order to achieve compatibility with existing systems, the communication makes use of the attributes specified in ISO 17573-3 wherever useful. The CCC is suitable for a range of short-range communication media. Specific definitions are given for the CEN-DSRC as specified in EN 15509, as well as for the use of ISO CALM IR, the Italian DSRC as specified in ETSI ES 200 674-1, ARIB DSRC, and WAVE DSRC as alternatives to the CEN-DSRC. The attributes and functions specified are for compliance checking by means of the DSRC communication services provided by DSRC application layer, with the CCC attributes and functions made available to the CCC applications at the RSE and OBE. The attributes and functions are specified on the level of application data units (ADUs). The definition of the CCC includes: — the application interface between OBE and RSE (as depicted in Figure 2); — use of the generic DSRC application layer as specified in ISO 15628 and EN 12834; — CCC data type specifications given in Annex A; — a protocol implementation conformance statement (PICS) proforma is given in Annex B; — use of the CEN-DSRC stack as specified in EN 15509, or other equivalent DSRC stacks as described in Annex C, Annex D, Annex E and Annex F; — security services for mutual authentication of the communication partners and for signing of data (see Annex H); In addition, an example CCC transaction is presented in Annex G and Annex I highlights how to use this document for the European Electronic Toll Service (EETS). Test specifications are not within the scope of this document.

### CWA 18083:2024

#### Methodology for the construction of omics-related knowledge graphs from animal, vegetal and environmental data

This CWA (CEN Workshop Agreement) provides a methodology for the construction of knowledge graphs on topics related to non-human omics data, specifically in the domain related to animal, plant, and environmental studies in general. This methodology provides a guide for the representation and analysis of such data in these domains to facilitate the understanding and discovery of relevant relationships and patterns about the information contained in a potential knowledge graph. This methodology is designed for application by researchers, scientists, and experts in the fields of genomics, proteomics, metabolomics, transcriptomics, and other omics fields related to non-human life in research work and projects in the field of semantics related to animals, plants, and the environment.

### EVS-EN ISO 20916:2024

#### In vitro diagnostikameditsiiniseadmed. Inimproovidega läbiviidavad kliinilised toimivusuuringud. Head uuringutavad

#### In vitro diagnostic medical devices - Clinical performance studies using specimens from human subjects - Good study practice (ISO 20916:2019)

This document defines good study practice for the planning, design, conduct, recording and reporting of clinical performance studies carried out to assess the clinical performance and safety of in vitro diagnostic (IVD) medical devices for regulatory purposes. NOTE 1 The purpose of these studies is to assess the ability of an IVD medical device in the hands of the intended user, to yield results pertaining to a particular medical condition or physiological/pathological state, in the intended population. The document is not intended to describe whether the technical specifications of the IVD medical device in question are adequately addressed by the clinical performance study. This document identifies the principles that underpin clinical performance studies and specifies general requirements intended to — ensure the conduct of the clinical performance study will lead to reliable and robust study results, — define the responsibilities of the sponsor and principal investigator, — assist sponsors, clinical research organization, investigators, ethics committees, regulatory authorities and other bodies involved in the conformity assessment of IVD medical devices, and — protect the rights, safety, dignity and well-being of the subjects providing specimens for use in clinical performance studies. Analytical performance studies are out of the scope of this document. NOTE 2 When the collection of specimens specifically for the analytical performance study creates an additional collection risk for subjects, some of the elements of this document (particularly the annexes) can be useful for ensuring subject safety. Clinical performance studies that are performed for reasons other than pre- and post-market regulatory purposes, such as for re-imbursement purposes, are out of the scope of this document. NOTE 3 Some of the elements of this document can be useful for the design of such studies, including subject safety and data integrity. This document does not include safety information for laboratory workers or other personnel collecting the study specimens. NOTE 4 Such information is included in other publications[1][12][13]. NOTE 5 Users of this document can consider whether other standards and/or requirements also apply to the IVD medical device which is the subject of the clinical performance study, for instance, in the situation for which there is an IVD medical device and a medical device used in an integrated system (e.g. a lancet, an IVD test strip, and a glucose meter), aspects of both this document and ISO 14155 can be considered.

### EVS-EN 45545-4:2024

#### Raudteealased rakendused. Raudteeveeremi tuleohutus. Osa 4: Tuleohutusnõuded raudteeveeremi projekteerimisel

#### Railway applications - Fire protection on railway vehicles - Part 4: Fire safety requirements for rolling stock design

This document specifies fire safety requirements for railway vehicle design to cover the objectives specified in EN 45545-1:2013. The measures and requirements specified in this document aim to protect passengers and staff in railway vehicles in the event of a fire on board by minimizing the risk of a fire starting, delaying the fire development and controlling the spread of fire products through the railway vehicle, thus aiding evacuation. It is not within the scope of this document to describe measures which ensure the preservation of the railway vehicles in the event of a fire.

### EVS-EN ISO 18589-3:2024

### **Measurement of radioactivity in the environment - Soil - Part 3: Test method of gamma-emitting radionuclides using gamma-ray spectrometry (ISO 18589-3:2023)**

This document specifies the identification and the measurement of the activity in soils of a large number of gamma-emitting radionuclides using gamma spectrometry. This non-destructive method, applicable to large-volume samples (up to about 3 l), covers the determination in a single measurement of all the  $\gamma$ -emitters present for which the photon energy is between 5 keV and 3 MeV. Generic test method and fundamentals using gamma-ray spectrometry are described in ISO 20042. This document can be applied by test laboratories performing routine radioactivity measurements as a majority of gamma-emitting radionuclides is characterized by gamma-ray emission between 40 keV and 2 MeV. The method can be implemented using a germanium or other type of detector with a resolution better than 5 keV. This document addresses methods and practices for determining gamma-emitting radionuclides activity present in soil, including rock from bedrock and ore, construction materials and products, pottery, etc. This includes such soils and material containing naturally occurring radioactive material (NORM) or those from technological processes involving Technologically Enhanced Naturally Occurring Radioactive Materials (TENORM) (e.g. the mining and processing of mineral sands or phosphate fertilizer production and use) as well as of sludge and sediment. This determination of gamma-emitting radionuclides activity is typically performed for the purpose of radiation protection. It is suitable for the surveillance of the environment and the inspection of a site and allows, in case of accidents, a quick evaluation of gamma activity of soil samples. This might concern soils from gardens, farmland, urban or industrial sites that can contain building materials rubble, as well as soil not affected by human activities. When the radioactivity characterization of the unsieved material above 200  $\mu\text{m}$  or 250  $\mu\text{m}$ , made of petrographic nature or of anthropogenic origin such as building materials rubble, is required, this material can be crushed in order to obtain a homogeneous sample for testing as described in ISO 18589-2.

## 17 METROLOOGIA JA MÕÖTMINE. FÜÜSIKALISED NÄHTUSED

### EVS-EN ISO 16032:2024

### **Acoustics - Measurement of sound pressure level from service equipment or activities in buildings - Engineering method (ISO 16032:2024)**

This document specifies an engineering method for the measurement of sound pressure levels in rooms from service equipment installed in the building. This document covers specifically measurements of sound from sanitary installations, mechanical ventilation, heating and cooling service equipment, lifts, rubbish chutes, heating devices, blowers, pumps and other auxiliary service equipment, and motor driven car park doors. It can also be applied to measurements of sounds from other types of equipment or activities within the building, e.g. noise from sport facilities or restaurants. The measurement of noise from external sound sources generating air-borne or ground-borne noise in the building are not included in this document. The methods are suitable for rooms with volumes of approximately 300 m<sup>3</sup> or less for instance, in dwellings, hotels, schools, offices and hospitals. The methods are not intended for measurements in large auditoria or concert halls.

## 29 ELEKTROTEHNika

### EVS-EN IEC 60079-31:2024

**Plahvatusohlikud keskkonnad. Osa 31: Seadmete tolmsüttimise eest ümbrisega saavutatav kaitse "t"**

**Explosive atmospheres - Part 31: Equipment dust ignition protection by enclosure "t"**

IEC 60079-31:2022 is applicable to equipment protected by enclosure and surface temperature limitation for use in explosive dust atmospheres. It specifies requirements for design, construction and testing of Ex Equipment and Ex Components. This document supplements and modifies the general requirements of IEC 60079-0. Where a requirement of this document conflicts with a requirement of IEC 60079-0, the requirement of this document takes precedence. This document does not apply to dusts of explosives, which do not require atmospheric oxygen for combustion, or to pyrophoric substances. This document does not apply to Ex Equipment or Ex Components intended for use in underground parts of mines as well as those parts of surface installations of such mines endangered by firedamp and/or combustible dust. This document does not take account of any risk due to an emission of flammable or toxic gas from the dust. This third edition cancels and replaces the second edition published in 2013. This edition constitutes a technical revision. Main significant changes from the previous edition are: 1) Document has been restructured from edition 2 2) Fault current rating of interrupting contacts in clauses 4.3.1 and 4.4.1, major change type C1 3) Cells and batteries in clauses 4.3.5.1 and 4.4.5.1, major change type C2 4) Overload or malfunction condition for the determination of temperature class for "tb" converter fed rotating electric machines, major change type C3 5) Additional requirements for entry devices with dust ignition protection by enclosure "t", major change type C4 Information about the background of 'Major Technical Changes' C1 – Ex Equipment having Level of Protection "ta" shall be rated for connection to a circuit with a prospective short circuit current of not greater than 1.5 kA. For Ex Equipment having Level of Protection "tb" or "tc" which is intended for mains connection and intended to interrupt fault current above 10kA, the equipment shall have a rated maximum short circuit withstand current, be tested according to 6.1.1.1, and be marked according to Clause 7. C2 – For Ex Equipment having Level of Protection "ta" which contains a cell or battery, only a sealed cell or battery shall be used. For Ex Equipment having Level of Protection "tb" and "tc" where there are sparking contacts or hot surfaces, and which contains a cell or battery, only a sealed cell or battery shall be used. C3 – Table 2 now includes malfunction conditions for temperature class determination of Level of Protection "tb" converter-fed electric machines. C4 – Annex A added for entry devices with Type of Protection "t" including cable transit devices.

**Infotehnoloogia. Turbemeetodid. Võrguturve. Osa 1: Ülevaade ja mõisted**

**Information technology - Security techniques - Network security - Part 1: Overview and concepts (ISO/IEC 27033-1:2015, identical)**

ISO/IEC 27033 see osa annab ülevaate võrguturbest ja sellega seotud määratlustest. Standard määratleb ja kirjeldab võrguturbega seotud mõisteid ja annab võrguturbe halduse juhiseid. (Lisaks sidelinkide kaudu edastatava teabe turbele puudutab võrguturve seadmete turvet ning seadmete, rakenduste/teenuste ja lõppkasutajatega seotud haldustegevuste turvet.) See osa puudutab kõiki, kes on seotud mingi võrgu omamise, käituse või kasutamisega. Lisaks juhtidele ja ülematele, kellegel on erikohustused infoturbe ja/või võrguturbe ja võrgu käituse alal või kes vastutavad organisatsiooni üldise turbekava ja turvapolitiitika väljatöötamise eest, kuuluvad nende hulka kõrgemad juhid ja muud mittetehnilised juhid või kasutajad. See puudutab ka kõiki võrguturbe arhitektuuri aspektide plaanimises, kavandamises ja teostamises osalejaid. Lisaks annab ISO/IEC 27033 see osa: —juhiseid selle kohta, kuidas tuvastada ja analüüsida võrgu turvariske ning määrrata selle analüüs põhjal võrgu turvanõuded; —ülevaate meetmetest, mis toetavad võrgu tehnilise turbe arhitektuure ja nendega seotud tehniliklistest meetmetest, ning ka nendest mittetehnikalistest ja tehniliklistest meetmetest, mis on rakendatavad mitte vaid võrkude puhul; — sissejuhatava kirjelduse kvaliteetsete võrgu tehnilise turbe arhitektuuride saavutamise ning tüüpiliste võrgustsenariumite ja võrgu tehnoloogiliste aladega seotud riski-, kavandamis- ja reguleerimisaspektide kohta (üksikasjalikult käsitlevad neid ISO/IEC 27033 järgmised osad), ning lühida küsimuste käsitleuse, mis on seotud võrguturbe meetmete teostamise ja käitusega ning nende teostuse pideva seire ja läbivaatusega. Kokkuvõttes annab see osa ülevaate standardist ISO/IEC 27033 ning teekaardi selle standardi teiste osade jaoks.

**Raudteealased rakendused. Pidurdamine. Raudteeveeremi kasutamiseks mõeldud magnetpidurdussüsteemi funktsionaalsuse ja töövõime kriteeriumid**

**Railway applications - Braking - Functional and performance criteria of Magnetic Track Brake systems for use in railway rolling stock**

This document specifies the functionality, position, constraints and control of a magnetic track brake system (MTB system) installed in bogies for use in emergency braking and in low adhesion conditions on Mainline Trains with speeds up to 280 km/h. It covers high suspension types of MTB only and not high/low and low suspension type of MTB. This document also contains test methods and acceptance criteria for an MTB system. It identifies interfaces with electrical equipment, bogie, track and other brake systems. On the basis of the existing international and national standards, additional requirements are defined for: - conditions of application for the MTB system; - retardation and brake forces; - functional and design features; - strength requirements; - type, series and vehicle implementation tests. For design and calculation a "reference surface" is established.

**Railway applications - Fire protection on railway vehicles - Part 4: Fire safety requirements for rolling stock design**

This document specifies fire safety requirements for railway vehicle design to cover the objectives specified in EN 45545-1:2013. The measures and requirements specified in this document aim to protect passengers and staff in railway vehicles in the event of a fire on board by minimizing the risk of a fire starting, delaying the fire development and controlling the spread of fire products through the railway vehicle, thus aiding evacuation. It is not within the scope of this document to describe measures which ensure the preservation of the railway vehicles in the event of a fire.

## 75 NAFTA JA NAFTATEHNOLOGIA

### EVS-EN 12916:2024

#### Petroleum products - Determination of aromatic hydrocarbon types in middle distillates - High performance liquid chromatography method with refractive index detection

This document specifies a test method for the determination of the content of mono-aromatic, di aromatic and tri+aromatic hydrocarbons in diesel fuels, paraffinic diesel fuels and petroleum distillates. This document specifies two procedures, A and B. Procedure A is applicable to diesel fuels that may contain fatty acid methyl esters (FAME) up to 30 % (V/V) (as in [1], [2] or [3]) and petroleum distillates in the boiling range from 150 °C to 400 °C (as in [4]). Procedure B is applicable to paraffinic diesel fuels with up to 7 % (V/V) FAME. This procedure does not contain a dilution of the sample in order to determine the low levels of aromatic components in these fuels. The polycyclic aromatic hydrocarbons content is calculated from the sum of di-aromatic and tri+aromatic hydrocarbons and the total content of aromatic compounds is calculated from the sum of the individual aromatic hydrocarbon types. Compounds containing sulfur, nitrogen and oxygen can interfere in the determination; mono-alkenes do not interfere, but conjugated di-alkenes and poly-alkenes, if present, can do so. The measurement ranges that apply to this method are given in Table 2 and Table 3. NOTE 1 For the purpose of this document, the terms "% (m/m)" and "% (V/V)" are used to represent the mass fraction,  $\mu$ , and the volume fraction,  $\varphi$ , of a material respectively. NOTE 2 By convention, the aromatic hydrocarbon types are defined on the basis of their elution characteristics from the specified liquid chromatography column relative to model aromatic compounds. Their quantification is performed using an external calibration with a single aromatic compound for each of them, which may or may not be representative of the aromatics present in the sample. Alternative techniques and test methods may classify and quantify individual aromatic hydrocarbon types differently. NOTE 3 Backflush is part of laboratory-internal maintenance. WARNING - The use of this document can involve hazardous materials, operations and equipment. This document does not purport to address all of the safety problems associated with its use. It is the responsibility of users of this document to take appropriate measures to ensure the safety and health of personnel prior to application of the standard, and fulfil statutory and regulatory requirements for this purpose.

### EVS-EN 12261:2024

#### Gaasiarvestid. Turbiingaasiarvestid Gas meters - Turbine gas meters

This document specifies the measuring conditions, requirements and tests for the construction, performance and safety of class 1,0 axial and radial turbine gas meters with mechanical indicating devices, hereinafter referred to as a meter(s), having in-line pipe connections for gas flow measurement. This document applies to turbine gas meters used to measure the volume of fuel gases of the 1st and 2nd gas families, the composition of which is specified in EN 437:2021, at maximum working pressures up to 420 bar, actual flow rates up to 25 000 m<sup>3</sup>/h over a gas temperature range of at least 40 K and for a climatic environmental temperature range of at least 50 K. This document applies to meters that are installed in locations with vibration and shocks of low significance and in: - closed locations (indoor or outdoor with protection as specified by the manufacturer) with condensing or with non-condensing humidity; or, if specified by the manufacturer, - open locations (outdoor without any covering) with condensing humidity or with non-condensing humidity; and in locations with electromagnetic disturbances. Unless otherwise specified in this document: - all pressures used are gauge; - all influence quantities, except the one under test, are kept relatively constant at their reference value. Clauses 1 to 7 and Annex B are for design and type testing only, with the exception of 6.2.4.3, 6.2.5.3, 6.7.1.2.2 and 6.7.2.2.2. Annex C can be used to provide guidance on periodic tests during use. Clause 8 and Annexes D and E are for each meter prior to dispatch. Annex A is intended to be used for both type and individual testing. Annex F is intended to be used for individual testing. Annex G is intended to be used for design.

### EVS-EN 15941:2024

#### Sustainability of construction works - Data quality for environmental assessment of products and construction work - Selection and use of data

This document supports the data quality assessment and selection of data for product-level Environmental Product Declarations (EPD) according to the core product category rules of EN 15804 and for the environmental performance assessment of buildings according to prEN 15978 1 in a consistent way. It can also be used to assess and select data for the environmental assessment of civil engineering works according to EN 17472. It defines data quality requirements with respect to temporal, technological and geographical representativeness for the data used to calculate the Life Cycle Assessment (LCA) based indicator results of the EPD and for construction works when applying EPD, life cycle inventory data or other LCA based information, and generates a hierarchy to support the selection of the most appropriate data with regard to data quality. It also addresses the reporting of data quality at product and building level.

#### Acoustics - Measurement of sound pressure level from service equipment or activities in buildings - Engineering method (ISO 16032:2024)

This document specifies an engineering method for the measurement of sound pressure levels in rooms from service equipment installed in the building. This document covers specifically measurements of sound from sanitary installations, mechanical ventilation, heating and cooling service equipment, lifts, rubbish chutes, heating devices, blowers, pumps and other auxiliary service equipment, and motor driven car park doors. It can also be applied to measurements of sounds from other types of equipment or activities within the building, e.g. noise from sport facilities or restaurants. The measurement of noise from external sound sources generating air-borne or ground-borne noise in the building are not included in this document. The methods are suitable for rooms with volumes of approximately 300 m<sup>3</sup> or less for instance, in dwellings, hotels, schools, offices and hospitals. The methods are not intended for measurements in large auditoria or concert halls.

# STANDARDIKAVANDITE ARVAMUSKÜSITLUS

Selleks, et tagada standardite vastuvõtmise, järgides konsensusse põhimõtteid, peab standardite vastuvõtmisele eelnema standardikavandite avalik arvamusküsitlus, milleks ettenähtud perioodi jooksul (üldjuhul 60 päeva) on ajast huvitatui võimalik tutvuda standardikavanditega, esitada kommentaare ning teha ettepanekuid parandusteks. Eriti on oodatud teave, kui rahvusvahelist või Euroopa standardikavandit ei peaks vastu võtma Eesti standardiks (vastuolu Eesti õigusaktidega, pole Eestis rakendatav jt põhjustel).

Arvamusküsitlusele esitatakse Euroopa ja rahvusvahelised standardikavandid, mis on kavas üle võtta Eesti standarditeks, ja Eesti algupärased standardikavandid ning algupäraste tehniliste spetsifikatsioonide ja juhendite kavandid.

Iga arvamusküsitlusel oleva kavandi kohta on esitatud alljärgnev informatsioon:

- tähis;
- pealkiri;
- käsitlusala;
- keel (en = inglise; et = eesti);
- Euroopa või rahvusvahelise alusdokumendi tähis, selle olemasolul;
- asendusseos, selle olemasolul;
- arvamuste esitamise tähtaeg.

Kavanditega saab tutvuda ja kommentaare esitada Eesti Standardimis- ja Akrediteerimiskeskuse veebilehel asuvas kommenteerimisportaalil: <https://www.evs.ee/kommenteerimisportaal/>

Igal kuul uuendatav teave eestikeelsena avaldatavate Eesti standardite kohta, sh eeldatavad kommenteerimise ja avaldamise tähtpäevad, on leitav Eesti Standardimis- ja Akrediteerimiskeskuse veebilehel avaldatavast standardimisprogrammist.

#### Aerospace series - Programme management - Recommendations for the implementation of the integrated logistic support

The purpose of this document is to: - identify and describe, in a structured way, the principles of the integrated logistic support (ILS) activities and tasks for the main types of stakeholders in the system life cycle, from the expression of need to disposal; - place the activities, tasks and ILS deliverables within the programme execution; - identify the main selection and sizing of activities and tasks criteria according to the nature and the requirements of the programme; - control the relations with the other aspects of programme management. This document covers the following subjects: - management of ILS (definition, implementation and running of the processes); - expression of the support requirements; - elaboration of the contracts (e.g. for development, maintenance, supply - implementation of the tasks and processes. This document is also related to the following subjects: - relations with costs and lead times control, configuration management, performance and RAMS management, quality assurance, documentation management; - regulations (e.g. information system security, export controls, safety at work); - human and organisational factors (HOF); - environment (e.g. RoHS, REACH); - information systems (IS) and the links between them; - logistics information systems (LIS); - in-service support (ISS) activities; - configuration management of ILS objects; - life cycle. The following stakeholders are concerned by ILS: - users in the broadest sense: operators, maintenance operators, administrators, dismantlers of the system, trainers; - the customer, who: - prepares technical and contractual specifications of need with which the system shall comply, - sets up the funding of the programme, - oversees the realization and commissioning of the main system and of the support system, - facilitates the feedback; NOTE 1 At the highest level of the system, the customer can also be referred to as the "project owner". NOTE 2 The "main system" can also be referred to as the "system of interest". - the supplier(s) who deliver a system (main and support) to the customer, which meets the performance specifications, including the regulatory requirements, on time and for the agreed cost, throughout the system life cycle; NOTE At the highest level of the system, the supplier can also be referred to as the "industrial prime contractor". - the regulatory authorities that supervise and approve the support processes and equipment, as needed. The principles laid down in this document can be applied, after adaptation, to all the customer/supplier relations resulting from the breakdown of the main contract into sub-contracts.

#### Electronic fee collection - System architecture for vehicle-related tolling - Part 3: Data dictionary (ISO/DIS 17573-3:2024)

This document specifies the syntax and semantics of data objects in the field of electronic fee collection (EFC). The definitions of data types and assignment of semantics are provided in accordance with the abstract syntax notation one (ASN.1) technique, as specified in ISO/IEC 8824-1. This document defines: — ASN.1 (data) types within the fields of EFC; — ASN.1 (data) types of a more general use that are used more specifically in standards related to EFC. This document does not seek to define ASN.1 (data) types that are primarily related to other fields that operate in conjunction with EFC, such as cooperative intelligent transport systems (C-ITS), the financial sector, etc.

#### **Microbiology of the food chain - Detection, isolation and characterization of Shiga toxin-producing Escherichia coli (STEC) - Part 2: Horizontal method for the characterization of Shiga toxin-producing Escherichia coli (STEC) isolates (ISO/DIS 13136-2:2024)**

This document is applicable to pure cultures of STEC. The present standard describes the characterization of STEC strains, isolated from any source. In particular, the characterization of STEC strains described here regard: - subtyping of the Stx-coding genes; - determination of the presence of eae gene; - determination of the presence of aggR gene; - identification of the presence of genes associated to the following serogroups: O157, O26, O111, O103, O145, O121 and O45. The full characterization of the isolated STEC strains is achieved by performing all the modules described here. The characterization scheme is not sequential, and the different modules can be implemented separately based on specific needs (e.g. Regulatory needs, Competent Authority's requests, clients' request). Alternative methods may be used, including Whole Genome Sequencing (WGS), provided these are verified according to the reference standard ISO 16140-2.

#### **Security of medical electrical equipment containing high-activity sealed radioactive sources**

1.1 Scope This document establishes security requirements of ME EQUIPMENT using high activity SEALED RADIOACTIVE SOURCES, directly or indirectly, for medical treatment and other clinical procedures. ME EQUIPMENT containing SEALED RADIOACTIVE SOURCES that are defined as Category 1, 2 and 3 radioactive sources by IAEA1 are subject to this standard. 1.2 Object The object of this standard is to specify requirements for the security of ME EQUIPMENT containing high activity SEALED RADIOACTIVE SOURCES with the aim to minimize the risk of unauthorized access to the contained RADIOACTIVE SOURCES, and to serve as the basis for particular standards. This standard contains requirements for the MANUFACTURER of the ME EQUIPMENT and, separately, for the RESPONSIBLE ORGANIZATION regarding security at the location during use and storage. The requirements of this standard apply when the RADIOACTIVE SOURCE(s) are contained in the ME EQUIPMENT, i.e. from the time when the RADIOACTIVE SOURCE(s) are inserted into the ME EQUIPMENT, during the INTENDED USE and when the ME EQUIPMENT is not being used for its INTENDED PURPOSE or taken out of regular use, until the equipment is being decommissioned, i.e. until all RADIOACTIVE SOURCE(s) are permanently removed from the equipment.

### prEN IEC 80601-2-52:2024

#### **Medical electrical equipment - Part 2-52: Particular requirements for the basic safety and essential performance of medical beds**

Clause 1 of the general standard<sup>1</sup> 229 applies, except as follows: 201.1.1 Scope Replacement: This International Standard applies to the BASIC SAFETY and ESSENTIAL PERFORMANCE of MEDICAL BEDS as defined in 201.3.214, intended for ADULTS as defined in 201.3.222. Included in scope are both electrical and non-electrical (manual) MEDICAL BEDS with or without adjustable features. This standard does not apply for MEDICAL BEDS intended for CHILDREN covered by IEC 80601-2-89 Medical electrical equipment – Particular requirements for the basic safety and essential performance of medical beds for children. A BED-LIFT and/or a detachable MATTRESS SUPPORT PLATFORM in combination with a compatible non-MEDICAL BED as specified by the MANUFACTURER is also considered a MEDICAL BED. Excluded are devices for which the intended use is mainly for examination or transportation under medical supervision (e.g. stretcher, examination table). This standard does not apply in all requirements to MEDICAL BEDS with special functionality. Beds that are intended to be used for ADULTS with atypical anatomy shall state what atypical anatomies are meant. Additional requirements for the stated atypical anatomies shall be determined in the product RISK MANAGEMENT process and implemented as appropriate in the bed design. EXAMPLE A bed intended for bariatric PATIENTS would require consideration of the differences in anthropomorphic ranges, and having implemented those ranges would label appropriately for the intended PATIENT population. If a clause or subclause is specifically intended to be applicable to a MEDICAL BED only, or to ME SYSTEMS only, the title and content of that clause or subclause will say so. If that is not the case, the clause or subclause applies both to MEDICAL BED and to ME SYSTEMS, as relevant. HAZARDS inherent in the intended physiological function of MEDICAL BED or ME SYSTEMS within the scope of this standard are not

covered by specific requirements in this standard except in 7.2.13 and 8.4.1 of the general standard. NOTE See also 4.2 of the general standard.

Keel: en

### prEN IEC 80601-2-89:2024

#### Medical electrical equipment - Part 2-89: Particular requirements for the basic safety and essential performance of medical beds for children

Replacement: This standard applies to the BASIC SAFETY and ESSENTIAL PERFORMANCE of MEDICAL BEDS, hereafter referred to as MEDICAL BEDS as defined in 201.3.219, intended for CHILDREN as defined in 201.3.207, and ADULTS with atypical anatomy (ADULTS ranging outside the definition for ADULTS in 201.3.201). This standard applies to electrical or non-electrical MEDICAL BEDS with nonadjustable and electrical / mechanical adjustable functions. This standard applies to MEDICAL BEDS with an INTERNAL LENGTH of up to 180 cm suitable to a body length of 155 cm. NOTE 1 The limitation of 180 cm is in order to minimize the foreseeable misuse, of a parent sharing the bed with the child or that the bed will be used by an ADULT. If a manufacturer wishes to make a bed that can be used by both a child and an ADULT, e.g. INTERNAL LENGTH of 180 cm or more, then it shall fulfil both IEC 80601-2-52 and this particular standard. This Standard does not apply to: • ADULT only beds covered by IEC 80601-2-52 • incubators covered by IEC 60601-2-19; • devices for which the INTENDED USE is mainly for examination or transportation under medical supervision (e.g. stretcher, examination table). If a clause or subclause is specifically intended to be applicable to a MEDICAL BED only, or to ME SYSTEMS only, the title and content of that clause or subclause will say so. If that is not the case, the clause or subclause applies both to MEDICAL BEDS and to ME SYSTEMS, as relevant. HAZARDS inherent in the intended physiological function of MEDICAL BEDS or ME SYSTEMS within the scope of this standard are not covered by specific requirements in this standard except in 7.2.13 and 8.4.1 of the general standard. ### prEN 14135

#### Covering - Determination of fire protection ability

This document specifies a method for determining the ability of a covering to protect underlying materials against damage during a specified fire exposure. The document is not used for the evaluation of fire resistance classifications (e.g. EI, EW, E,...) or reaction to fire classifications (according to EN 13501 1). The fire protection ability is nullified by the presence of combustible materials in the cavity behind the covering. The applicability of the results is limited according to the quantity and position of such combustible materials within that cavity. NOTE The amount of combustible materials permissible in the cavity is generally laid down in national regulations.

#### **Reference conditions and procedures for testing industrial and process measurement transmitters - Part 1: General procedures for all types of transmitters**

This Part of IEC 62828 establishes a general framework for defining reference conditions and test procedures applicable for assessing the measurement performances of all types of industrial and process measurement transmitters (PMTs) used in measuring and control systems for industrial process and machinery. For the purpose of this document, an analogue PMT is a process measurement transmitter with only analogue current and/or voltage output(s), irrespective the technology adopted and the complexity of the circuitry. All the other process measurement transmitters, with digital output(s) only or with hybrid analogue and digital output(s), are considered to be digital PMTs. This part of IEC 62828 constitutes a common reference for the other parts of the series. Specific test procedures and additional requirements for given types of PMTs (pressure, temperature, level, flow, etc.) are covered by other parts of this series. Proximity devices according IEC 60947-series with analogue output are excluded from the scope of this standard. Note 1: in industrial and process applications, to indicate the process measurement transmitters it is common also to use the terms "industrial transmitters", or "process transmitters". Note 2: for better clarity, when the complete definition "industrial and process measurement transmitter" makes the sentence too long in this standard, the short term "transmitter", or PMT, is used instead.

#### **Welding consumables - Wire electrodes, wires, rods and deposits for gas shielded arc welding of high strength steels - Classification (ISO/DIS 16834:2024)**

ISO 16834:2012 specifies requirements for classification of wire electrodes, wires, rods and all-weld metal deposits in the as-welded condition and in the post-weld heat-treated (PWHT) condition for gas shielded metal arc welding and tungsten inert-gas welding of high-strength steels with a minimum yield strength greater than 500 MPa, or a minimum tensile strength greater than 570 MPa. One wire electrode can be tested and classified with different shielding gases. ISO 16834:2012 is a combined specification providing for classification utilizing a system based upon the yield strength and the average impact energy of 47 J of all-weld metal, or utilizing a system based upon the tensile strength and the average impact energy of 27 J of all-weld metal.

#### **prEN IEC 62941:2024**

#### **Terrestrial photovoltaic (PV) modules - Quality system for PV module manufacturing**

This document is applicable to organizations manufacturing photovoltaic (PV) modules certified to IEC 61215 series and IEC 62108 for design qualification and type approval and IEC 61730 for safety qualification. The design qualification and type approval of PV modules depend on appropriate methods for product and process design, as well as appropriate control of materials and processes used to manufacture the product. This document lays out best practices for product design, manufacturing processes, and selection and control of materials used in the manufacture of PV modules that have met the requirements of IEC 61215 series and IEC 61730. These standards also form the basis for factory audit criteria of such sites by various certifying and auditory bodies. The object of this document is to provide a framework for the improved confidence in the ongoing consistency of performance and reliability of certified PV modules. The requirements of this document are defined with the assumption that the quality management system of the organization has already fulfilled the requirements of ISO 9001 or equivalent quality management system. This document is not intended to replace or remove any requirements of ISO 9001 or equivalent quality management system. By maintaining a manufacturing system in accordance with this document, PV modules are expected to maintain their performance as determined from the test sequences in IEC 61215 series and IEC 61730. NOTE: Reference to IEC 61730 means reference to both parts 1 and 2. This document is applicable to all PV modules independent of design and technology, i.e. flat panel, concentrator photovoltaic (CPV). Quality controls for CPV and nonconventional flat-plate manufacturing will differ somewhat from those of more conventional designs; this document has not considered these differences.

#### **Lead-acid starter batteries - Part 5: Mechanical properties of battery housings and handles**

This document is applicable to housing and accessory parts of lead-acid batteries made of polypropylene. Lead-acid batteries are used primarily as a power source for the starting of internal combustion engines, lighting and for auxiliary equipment of road vehicles. These batteries are all referred to as starter batteries. This document is applicable to starter batteries for passenger cars and for commercial or industrial vehicles. Battery housing and accessory parts according to this document do not provide any protection of the polypropylene against aging due to light. The parts are intended to be used within the engine compartment or within battery boxes where they are protected from light. The purpose of this document is to define requirements for raw material used to produce housing and accessory parts for starter batteries, to define requirements of the physical properties of battery housing and to define uniform test procedures for validation.

## prEN 50342-6:2024

### Lead-acid starter batteries - Part 6: Batteries for micro-cycle applications

This document is applicable to lead-acid batteries with a nominal voltage of 12 V, used primarily as power source for the starting of internal combustion engines (ICE), lighting and also for auxiliary equipment of ICE vehicles. These batteries are commonly called "starter batteries". Batteries with a nominal voltage of 6 V are also included in the scope of this document. All referenced voltages need to be divided by two for 6 V batteries. The batteries under the scope of this document are used for micro-cycle applications in vehicles which can also be called Start-Stop (or Stop-Start, idling-stop system, micro-hybrid or idle-stop-and-go) applications. In cars with this special capability, the internal combustion engine is switched off during a complete vehicle stop, during idling with low speed or during idling without the need of supporting the vehicle movement by the internal combustion engine. During the phases in which the engine is switched off, most of the electric and electronic components of the car need to be supplied by the battery without support of the alternator. In addition, in most cases an additional regenerative braking (recuperation or regeneration of braking energy) function is installed. The batteries under these applications are stressed in a completely different way compared to classical starter batteries. Aside of these additional properties, those batteries need to crank the ICE and support the lighting and also auxiliary functions in a standard operating mode with support of the alternator when the internal combustion engine is switched on. All batteries under this scope need to fulfil basic functions, which are tested under application of EN 50342-1:2015. This document is applicable to batteries for the following purposes: — Lead-acid batteries of the dimensions according to EN 50342-2 for vehicles with the capability to automatically switch off the ICE during vehicle operation either in standstill or moving ("Start-Stop"); — Lead-acid batteries of the dimensions according to EN 50342-2 for vehicles with Start-Stop applications with the capability to recover braking energy or energy from other sources. This document is not applicable to batteries for purposes other than mentioned above, but it is applicable to EFB delivered in dry-charged conditions according to EN 50342-1:2015, Clause 7. NOTE The applicability of this document also for batteries according to EN 50342-4 is under consideration.

#### Space - Galileo Timing Receiver - Functional and Performance Requirements and associated Tests

This document is intended to establish and define functional and performance requirements and associated tests for Galileo Timing Receivers. This document covers the following topics related to Galileo Timing Receivers: - GNSS constellations and frequencies processed: Galileo plus additionally GPS, with nominal mode being dual-frequency processing, - Time scales processed, including at least Galileo System Time and Universal Time Coordinate, - User dynamics, with two operation modes: static users with well-known and static antenna position and dynamics users with moving antenna, - Holdover devices, - Nominal and back-up modes, including single-frequency modes, single-constellation modes and holdover mode. - Processing of timing integrity information disseminated by the Galileo System, - Time Receiver Autonomous Integrity Monitoring processing, - Anti-jamming and anti-spoofing capabilities, including Automatic Gain Control monitoring and Galileo Open Service Navigation Message Authentication processing, - Robustness to multipath. In addition, this document gives guidelines for the installation and maintenance of the receiver, including antenna, cabling and receiver installation, initial and periodic receiver calibration, and periodic maintenance. On top of the functional requirements, performance requirements this document defines in terms of different key performance indicators such as: - Accuracy, availability, continuity and integrity requirements, - T-RAIM performances, including time to alert, - Holdover performances including maximum degradation of the timing solution with time and maximum holdover time, This document also gives a simple test suite to verify the most fundamental requirements of the Galileo Timing Receivers.

#### Passive RF and microwave devices, intermodulation level measurement - Part 3: Measurement of passive intermodulation in coaxial connectors

This part of IEC 62037 defines the impact test on coaxial connectors to evaluate their robustness against weak connections and particles inside the connector, as independently as possible from the effects of cable PIM (passive intermodulation). For other connectors (e.g. panel mounted connectors), the cable can be replaced by an adequate transmission-line (e.g. airline, stripline). In order to evaluate the effects of mechanical stresses on the connectors, a series of impacts is applied to the connectors while measuring the PIM.

#### Space - Galileo Timing Receiver - Functional and Performance Requirements and associated Tests

This document is intended to establish and define functional and performance requirements and associated tests for Galileo Timing Receivers. This document covers the following topics related to Galileo Timing Receivers: - GNSS constellations and frequencies processed: Galileo plus additionally GPS, with nominal mode being dual-frequency processing, - Time scales processed, including at least Galileo System Time and Universal Time Coordinate, - User dynamics, with two operation modes: static users with well-known and static antenna position and dynamics users with moving antenna, - Holdover devices, - Nominal and back-up modes,

including single-frequency modes, single-constellation modes and holdover mode. - Processing of timing integrity information disseminated by the Galileo System, - Time Receiver Autonomous Integrity Monitoring processing, - Anti-jamming and anti-spoofing capabilities, including Automatic Gain Control monitoring and Galileo Open Service Navigation Message Authentication processing, - Robustness to multipath. In addition, this document gives guidelines for the installation and maintenance of the receiver, including antenna, cabling and receiver installation, initial and periodic receiver calibration, and periodic maintenance. On top of the functional requirements, performance requirements this document defines in terms of different key performance indicators such as: - Accuracy, availability, continuity and integrity requirements, - T-RAIM performances, including time to alert, - Holdover performances including maximum degradation of the timing solution with time and maximum holdover time, This document also gives a simple test suite to verify the most fundamental requirements of the Galileo Timing Receivers.

### **Aerospace series - Unmanned Aircraft Systems - Part 008: C5 Accessories kits**

This document provides technical specification and verification methods to support compliance with Commission Delegated Regulation (EU) 2020/1058 of 27 April 2020 amending Delegated Regulation (EU) 2019/945 on unmanned aircraft systems and on third-country operators of unmanned aircraft systems. More specifically, it addresses compliance with class C5 accessories kit requirements. Even if security, including IT security, may be useful from an operational point of view, it falls outside the scope of this document. This document delineates how a product compliance for the C5 accessories performance and reliability of the safety equipment can be ensured. The specifications will ensure that the manufacturer's C3 compliance is not altered by the accessories kit. This document only addresses UA with lift provided by rotary wings. Fixed wings, VTOL and other hybrid UA are out of this scope. Compliance with this document assists in complying with CE marking technical requirements. This document is only applicable for UA with energy sources based on electro-chemical technologies. Additional hazards that occur from the characteristics of the payload are excluded and are, conversely, under the responsibility of the UAS manufacturer and UAS operator

### **Aerospace series - Programme management - Recommendations for the implementation of the integrated logistic support**

The purpose of this document is to: - identify and describe, in a structured way, the principles of the integrated logistic support (ILS) activities and tasks for the main types of stakeholders in the system life cycle, from the expression of need to disposal; - place the activities, tasks and ILS deliverables within the programme execution; - identify the main selection and sizing of activities and tasks criteria according to the nature and the requirements of the programme; - control the relations with the other aspects of programme management. This document covers the following subjects: - management of ILS (definition, implementation and running of the processes); - expression of the support requirements; - elaboration of the contracts (e.g. for development, maintenance, supply - implementation of the tasks and processes. This document is also related to the following subjects: - relations with costs and lead times control, configuration management, performance and RAMS management, quality assurance, documentation management; - regulations (e.g. information system security, export controls, safety at work); - human and organisational factors (HOF); - environment (e.g. RoHS, REACH); - information systems (IS) and the links between them; - logistics information systems (LIS); - in-service support (ISS) activities; - configuration management of ILS objects; - life cycle. The following stakeholders are concerned by ILS: - users in the broadest sense: operators, maintenance operators, administrators, dismantlers of the system, trainers; - the customer, who: - prepares technical and contractual specifications of need with which the system shall comply, - sets up the funding of the programme, - oversees the realization and commissioning of the main system and of the support system, - facilitates the feedback; NOTE 1 At the highest level of the system, the customer can also be referred to as the "project owner". NOTE 2 The "main system" can also be referred to as the "system of interest". - the supplier(s) who deliver a system (main and support) to the customer, which meets the performance specifications, including the regulatory requirements, on time and for the agreed cost, throughout the system life cycle; NOTE At the highest level of the system, the supplier can also be referred to as the "industrial prime contractor". - the regulatory authorities that supervise and approve the support processes and equipment, as needed. The principles laid down in this document can be applied, after adaptation, to all the customer/supplier relations resulting from the breakdown of the main contract into sub-contracts.

#### **Energy efficiency of industrial trucks - Test methods - Part 1: General (ISO/DIS 23308-1:2024)**

This document specifies general test criteria and requirements to measure the energy consumption for self-propelled industrial trucks (hereinafter referred to as trucks) during operation. For electric trucks, the efficiency of the battery and the battery charger is included. The truck specific requirements in ISO 23308-2 and ISO 23308-3 take precedence over the respective requirements of ISO 23308-1. This document is applicable to the in-use phase of the product life cycle. It applies to the following truck types according to ISO 5053-1: — counterbalance lift truck; — articulated counterbalance lift truck; — reach truck (with retractable mast or fork arm carriage); — straddle truck; — pallet-stacking truck; — pallet truck; — platform and stillage truck; — pallet truck end controlled; — order-picking truck; — centre-controlled order-picking truck; — towing, pushing tractor and burden carrier; — towing and stacking tractor; — side-loading truck (one side only); — variable-reach container handler; — counterbalance container handler; — lateral-stacking truck (both sides); — lateral-stacking truck (three sides); — multi-directional lift truck.

## 75 NAFTA JA NAFTATEHNOLOGIA

### prEN 1427

#### Bitumens and bituminous binders - Determination of the softening point - Ring and Ball method

This document specifies a method for the determination of the softening point of bitumen and bituminous binders in the range of 28 °C to 150 °C. The method described also applies to bituminous binders that have been recovered from bituminous mixes, e.g. by extraction according to EN 12697 3 [1]. The change from mercury thermometers to electronic temperature devices has revealed that the temperature definition in the mercury thermometer has not been precise enough to make a correct, unbiased transfer to electronic devices. Care should be taken for softening points ring and ball above 100 °C as the condition may have changed from previous practice to present days testing equipment. Below approximately 100 °C the difference in temperature readings between electronic and mercury stem thermometer is acceptable compared to the repeatability of this test method.

### Plastics - Design for recycling of PVC based profiles for construction products

This document applies to unplasticized poly(vinyl chloride) (PVC-U) profiles that are intended to be used for the fabrication of windows and doors in accordance with the EN 14351 series or EN 16034, shutters according to EN 13659 and other construction profiles in accordance with the EN 13245 series. Furthermore, this document is also applicable for profiles used in other PVC-U products, which can include recyclates. This document gives references and specifies general and product-specific design for recycling principles. NOTE 1 In this document, the term "PVC-U profiles" is used to refer to construction profiles made from PVC-U, PVC-UE, and PVC-U-based natural fibre composites (NFC). Criteria for the use of materials, process conditions, and recyclability are defined, which are considered during the design process. This document defines principles to - obtain the highest possible share of recyclability of the PVC-U part in the profile, and - increase the share of PVC-U recyclate in the profile, while complying with requirements for the final product, where existent and defined elsewhere. This document establishes flowcharts which help to assess, (i) how recyclability is evaluated and (ii) whether inclusion of rPVC-U is possible. The following components of the final PVC-U construction product are considered in this document: - profiles; - reinforcements; - gaskets; - insulations; - coverings. This document specifies only the technical connection of the profile to other components (such as glazing or hardware) and their impact on the recyclability of the PVC-U profiles. The recyclability of the other components (e.g. glazing, aluminium cover, hardware) is excluded from this document. NOTE 2 Examples for profiles included in this document and their intended use can be found in Figure 1.

### **Surfaces for sport areas - Synthetic turf and textile sports surfaces - Part 5: Specification for infill materials**

This document: a) specifies minimum performance and durability and requirements for infill materials used in synthetic turf, and textile sports surfaces; b) describes how the performance of an infill is to be measured, and the results classified; c) specifies the physical and chemical properties of an infill that are to be declared in a manufacturer's product declaration; d) specifies minimum production control tolerance to ensure consistency of infill materials between production batches; e) describes how reclaimed infill is to be tested to assess its suitability for reuse. NOTE 1 The sports performance characteristics of a synthetic turf or textile sports surface are provided by the combined characteristics of the synthetic turf or textile surface, any infill within the playing surface pile and any shockpad. The selection of the correct permutations of each is complex and the responsibility of the sports surface designer. NOTE 2 If infill materials migrate from a synthetic turf or textile sports surface into the surrounding natural environment, they become a source of contamination. To minimize the risk this occurring, guidance on how to prevent infill migration from the sports facility is given in CEN Technical Report PD CEN/TR 17519.

# **ALGUPÄRASTE STANDARDITE JA STANDARDILAADSETE DOKUMENTIDE KOOSTAMINE**

Allpool on toodud teave eelmise EVS Teataja avaldamise järel Eesti Standardimis- ja Akrediteerimiskeskusele esitatud algupäraste standardite ja standardilaadsete dokumentide koostamis-, muutmis- ja uustöötlusettepanekute kohta, millega algatatakse Eesti algupärase dokumendi koostamise protsess.

Rohkem infot koostatava dokumendi kohta saab EVS-i standardiosakonnast: [standardiosakond@evs.ee](mailto:standardiosakond@evs.ee).

Igal kuul uuendatav teave eestikeelsena avaldatavate Eesti standardite kohta, sh eeldatavad kommenteerimise ja avaldamise tähtpäevad, on leitav Eesti Standardimis- ja Akrediteerimiskeskuse veebilehel [avaldatavast standardmisprogrammist](#).

## **prEVS 908-1**

### **Hoone piirdetarindi soojsläbivuse arvutusjuhend. Osa 1: Välisõhuga kontaktis olev läbipaistmatu piire**

### **Guidance for calculation of thermal transmittance of building envelope. Part 1: Opaque building envelope in contact with outdoor-air**

Selles Eesti standardis antakse juhised materjalide soojsuserijuhtivuste ja välisõhuga kontaktis olevate läbipaistmatute piirdetarindite soojsläbivuse arvutuseks. Selle standardi käsitlusallasse ei kuulu uksed, aknad ja muud avatäited või tarindid, mille kaudu toimub soojsülekanne pinnasesse, ning tarindid, mis on projekteeritud õhku läbilaskvaks. Materjalide soojsuserijuhtivuse deklareeritud ja arvutusväärustuse määramise meetodid kehtivad arvutuslikel keskkonnatemperatuuridel vahemikus  $-30^{\circ}\text{C}$  kuni  $+60^{\circ}\text{C}$ . Soojsuserijuhtivuse temperatuuri- ja niiskusepõhisest teisendustegurid kehtivad keskmistel temperatuuridel vahemikus  $0^{\circ}\text{C}$  kuni  $30^{\circ}\text{C}$ . Piirdetarindite soojsläbivuse arvutusmeetod põhineb materjalide ja toodete soojsuserijuhtivuse või soojustakistuse arvutusväärtsel. Meetodit saab rakendada selliste tarindite ja tarindiosade puhul, mis koosnevad soojslikult homogeensetest kihtidest (mille seas võivad olla õhkvhahed) või soojslikult mittehomogeensetest kihtidest (välja arvatud juhtumid, kus soojustuskihis on oluline külmasild).

Asendab dokumenti: EVS 908-1:2016

Koostamisettepaneku esitaja: Targo Kalamees

# STANDARDITE JA STANDARDILAADSETE DOKUMENTIDE ÜLEVAATUS

Algupärase Eesti standardi ülevaatus toimub üldjuhul iga viie aasta järel ning selle eesmärk on kontrollida standardi tehnilist taset, vastavust aja nõuetele, vastavust kehtivatele õigusaktidele, kooskõla rahvusvaheliste või Euroopa standarditega jne.

Ülevaatuse tulemusena jäetakse standard kehtima, algatatakse standardi muudatuse või uustöötluse koostamine, tühistatakse standard või asendatakse see ülevõetava Euroopa või rahvusvahelise standardiga.

## PIKENDAMISKÜSITLUS

### EVS 920-2:2013

#### Katuseehitusreeglid. Osa 2: Metallkatused Requirements for roof building - Part 2: Metal roofs

See standard määrab kindlaks nõuded isekandvatele katusetoodetele, mis on valmistatud kuumtsingitud õhukesest lehtterasest, tsingitud, või tsingitud ja kaetud polümeersete pinnakatetega. Standard määratleb nõuded metallist katuste ehitamiseks ning nõuded metallist katusekatetoodetele, mis on vastavuses standardite EVS-EN 14782 ning EVS-EN 14783 nõuetega. Standard on kasutamiseks tootjatele, paigaldajatele, lõpptarbijatele. Standard määrab nõuded toodetele ja paigalduslahendustele toodet kasutamiseks normaalsetes ekspluatatsioonitingimustes. Standard määratleb nõuded kuumtsingitud teraslehest toodet ja paigaldatud valtsplekk-katusele. Standard määratleb nõuded õhukesest tsingitud lehtterasest ja tsingitud ning polümeersete katetega kaetud katusekatetega. Nende alla liigituvad kõik katusekatetena kasutatavad profiile (katusekiviprofiiliga, trapetsprofiilid, siinusprofiiliga, peitkinnitusega plekid ja analoogid). Standardis esitatud viited seinakatetega on tingitud nende sagestasest kooskasutamisest katusekatetega. Standardis esinevad vited teistele metallidele, mida on oluline käsitleda kuumtsingitud ja kuumtsingitud ning pinnakatetega kaetud katusekatete seisukohast. See standard määratleb nõuded tööstuslikult toodetud kuumtsingitud ning kuumtsingitud ja polümeerse kattega terasest vihmaveesüsteemidele. Standard ei käsitle käsitööna valmistatud vihmaveesüsteemide osi. Standard estab nõuded kuni maapinnani, ega puuduta maa-aluseid drenaažisüsteeme ja -lahendusi. Standard ei esita nõudeid kõigile kandekonstruktsoonidele ega arhitektuursetele lahendustele. Selle standardi ainukesed nõuded kandekonstruktsoonidele on roovitusele metallkatustel.

Pikendamiskütluse lõppkuupäev: 13.04.2024

# TÜHISTAMISKÜSITLUS

Selles rubriigis avaldame teavet Euroopa standardimisorganisatsioonides algatatud Euroopa standardite tühistamisküsitluste kohta ning rahvusvahelise alusstandardiga Eesti standardite ja Eesti algupäraste dokumentide tühistamisküsitluste kohta. Küsitluse eesmärk on välja selgitada, kas allpool nimetatud standardite ja standardilaadsete dokumentide jätkuv kehtimine Eesti ja/või Euroopa standardina/dokumendina on vajalik.

Allviidatud standardite ja dokumentide kehtivana hoidmise vajalikkusest palume teavitada EVS-i standardiosakonda (standardiosakond@evs.ee).

## EVS-EN 167:2002

### **Isiklikud silmakaitsvahendid. Optilised katsemeetodid Personal eye-protection - Optical test methods**

This European Standard specifies optical test methods for eye-protectors, the requirements for which are contained in other ENs.

Keel: en

Alusdokumendid: EN 167:2001

Tühistamisküsitluse lõppkuupäev: 13.04.2024

## EVS-EN 1964-3:2000

### **Transportable gas cylinders - Specification for the design and construction of refillable transportable seamless steel gas cylinders of water capacities from 0,5 litre up to and including 150 litres - Part 3: Cylinders made of seamless stainless steel with an Rm value of less than 1100 MPa**

The standard sets out minimum requirements for the material, design, construction and workmanship, manufacturing processes and tests at manufacture of refillable seamless stainless steel gas cylinders of water capacities from 0,5 L up to and including 150 L for compressed, liquefiable and dissolved gases. This standard (Part 3) is applicable to cylinders with a maximum Rm value of 1100 N/mm<sup>2</sup>.

Keel: en

Alusdokumendid: EN 1964-3:2000

Tühistamisküsitluse lõppkuupäev: 13.04.2024

## EVS-EN 62464-2:2011

### **Magnetic resonance equipment for medical imaging - Part 2: Classification criteria for pulse sequences**

This International Standard specifies the description of PULSE SEQUENCES of MAGNETIC RESONANCE imaging. NOTE The classification in this standard is suitable for: - tender texts; - image annotation; - protocol definition; - technical publications. This International Standard does not apply to MAGNETIC RESONANCE spectroscopy. The classification does not focus on image contrast (T1, T2, proton density), as this is defined by PULSE SEQUENCE parameters (e.g. repetition time, echo time) and is not a property of the PULSE SEQUENCE alone. The PULSE SEQUENCE classification does not specify the K-SPACE acquisition scheme, reconstruction algorithm or post-processing.

Keel: en

Alusdokumendid: IEC 62464-2:2010; EN 62464-2:2011

Tühistamisküsitluse lõppkuupäev: 13.04.2024

## **TEADE EUROOPA STANDARDI OLEMASOLUST**

Selles rubriigis avaldame teavet Euroopa standardite ja CENELEC-i harmoneerimisdokumentide kohta, mille on Eesti Standardimis- ja Akrediteerimiskeskusele kättesaadavaks teinud Euroopa standardimisorganisatsioonid, ja mille Eesti standardina avaldamiseks on vajalik täiendav ettevalmistusaeg. Selliste teadete avaldamine võib olla vajalik, et tagada Euroopa standardite jõustumine Eesti standardina samal ajal nii eesti- kui ka ingliskeelsena.

Igal kuul uuendatav teave eestikeelsena avaldatavate Eesti standardite kohta, sh eeldatavad kommenteerimise ja avaldamise tähtpäevad, on leitav Eesti Standardimis- ja Akrediteerimiskeskuse veebilehel avaldatavast standardisprogrammist. Lisateave standardiosakonnast: [standardiosakond@evs.ee](mailto:standardiosakond@evs.ee).

**EN 1594:2024**

**Gas infrastructure - Pipelines for maximum operating pressure over 16 bar - Functional requirements**

Eeldatav avaldamise aeg Eesti standardina 05.2024

# UUED EESTIKEELSED STANDARDID JA STANDARDILAADSED DOKUMENDID

Igal kuul uuendatav teave eestikeelsena avaldatavate Eesti standardite kohta, sh eeldatavad kommenteerimise ja avaldamise tähtpäevad, on leitav Eesti Standardimis- ja Akrediteerimiskeskuse veebilehel [avaldatavast standardimisprogrammist](#).

## CEN/TR 16598:2023

### Kogumik põhjendustest standardile EN 1176. Nõuded Collection of rationales for EN 1176 - Requirements

Selles dokumendis esitatud põhjendused kirjeldavad standardis EN 1176 esitatud nõuete peamisi põhjusi. Dokumendis esitatud nõuded on vahendid (nt mõõtmed, katsemeetodid jne), mille abil soovitakse eesmärke saavutada.

## EVS-EN 1022:2023

### Mööbel. Istmed. Püstivuse määramine Furniture - Seating - Determination of stability

See dokument määrab kindlaks katsemeetodid ja nõuded kuni 110 kg kaaluga täiskasvanute kõigi istmetüüpide püstivuse määramiseks olenemata kasutusest, materjalist, disainist/konstruktsioonist või valmistusprotsessist. Kirjeldatud katsemeetodeid võib kasutada laste ja raskemate täiskasvanute istmetel, muutes katsekoormusi ja koormuspunkte. See dokument ei kehti istumiseks, toetamiseks või nõjatumiseks möeldud istmete kohta, mis nõuavad kasutajalt toimingut, et hoida kehaasendit stabiilses asendis. See dokument ei rakendu laste kõrgetele toolidele, laua külge kinnitatud toolidele ja vannitoa istmetele, millele kehitavad teised Euroopa standardid. See dokument sisaldb kolme lisa: Lisa A (normlisa) – Istmepõhja koormuskeha andmed Lisa B (normlisa) – Katseparametrid Lisa C (teatmelisa) – Istme ja seljatoe koormuspunkti šabloni poolringikujuline osa

## EVS-EN 747-1:2024

### Mööbel. Narivoodid ja kõrged voodid. Osa 1: Ohutuse, tugevuse ja vastupidavuse nõuded Furniture - Bunk beds and high beds - Part 1: Safety, strength and durability requirements

See dokument määrab kindlaks ohutuse, tugevuse ja vastupidavuse nõuded narivooditele ja kõrgetele vooditele koduseks ja koduväliseks kasutamiseks. Standard on rakendatav narivooditele ja kõrgetele vooditele sisepikkusega enam kui 1400 mm ja voodipõhja maksimaalse laiusega 1200 mm ja kõrgusega põrandast voodipõhja ülemise pinnani 600 mm või enam. See dokument ei rakendu eriotstarbelise kasutusega narivooditele ja kõrgetele vooditele, mis hõlmab kasutust vanglates ning sõjaväe- ja tuletörjeüksuste poolt, kuid ei piirdu sellega. Kui narivoodiga / kõrge voodiga kaasnevad teised tooted, nagu näiteks laud või mahutusmööbel, võivad lisaks kehtida asjakohased Euroopa standardid. Dokument sisaldb ühte lisa: — Lisa A (teatmelisa) – Põhijendused.

## EVS-EN 747-2:2024

### Mööbel. Narivoodid ja kõrged voodid. Osa 2: Katsemeetodid Furniture - Bunk beds and high beds - Part 2: Test methods

See dokument määrab kindlaks katsemeetodid koduse ja koduvälise kasutusega narivoodite ja kõrgete voodite ohutusele, tugevusele ja vastupidavusele. Katsed on rakendatavad vooditele sisepikkusega enam kui 1400 mm ja voodipõhja maksimaalse laiusega 1200 mm kõrgusega põrandast voodipõhja ülemise pinnani 600 mm või enam. Katsetused on ette nähtud rakendada voodile, mis on täielikult koostatud ja kasutusvalmis. Kohaldatavad ohutusnõuded on antud standardis EN 747-1:2024

## EVS-EN ISO/IEC 2382-37:2023

### Infotehnoloogia. Sõnavara. Osa 37: Biomeetria Information technology - Vocabulary - Part 37: Biometrics (ISO/IEC 2382-37:2022)

Dokument esitab süsteematiilise kirjelduse biomeetriavaldkonna neist mõistetest, mis puutuvad inimolendite eristamisse. Ühtlasi esitab see dokument eelisterminte vastavuse varasemates biomeetriaalastes rahvusvahelistes standardites kasutatud terminvariantidega, selgitades seeläbi terminikasutust valdkonnas. Dokument ei käitle (terminitega kaetud) mõisteid infotehnoloogia, kujutuvastuse, bioloogia, matemaatika vms valdkonnast. Biomeetria kasutab sääraseid teadmusvaldkondi aluspõhjana. Biomeetria kasutusviisidega seotud terminid jäavat põhimõtteliselt väljapoole selle dokumendi käsituslusalta.

## EVS-EN ISO/IEC 27001:2023

### Infoturve, küberturve ja privaatsuskaitse. Infoturbe halduse süsteemid. Nõuded Information security, cybersecurity and privacy protection - Information security management systems - Requirements (ISO/IEC 27001:2022)

See standard spetsifitseerib nõuded infoturbe halduse süsteemi rajamiseks, evituseks, käigushoiuks ja pidevaks täiustamiseks organisatsiooni kontekstis. Standard sisaldb ka nõudeid organisatsiooni vajadustele kohandatavaks infoturvariskide kontrolliks ja käsittuseks. Selles standardis püstitatud nõuded on üldistuslikud ning on mõeldud kohaldatavaiks kõigile organisatsioonidele, olenemata nende tüübist, suurusest või iseloomust. Kui organisatsioon taotleb vastavust sellele standardile, ei tohi ta välistada ühtki peatükkides 4 kuni 10 spetsifitseeritud nõuet.

## **EVS-ISO 6107:2024**

### **Vee kvaliteet. Terminoloogia**

#### **Water quality — Vocabulary (ISO 6107:2021, identical)**

See dokument määratleb teatud vee kvaliteedi iseloomustamise valdkondades kasutatavad terminid.

## **EVS-ISO/IEC 2382-36:2024**

### **Infotehnoloogia. Sõnastik. Osa 36: Õppimine, haridus, koolitus**

#### **Information technology -- Vocabulary -- Part 36: Learning, education and training (ISO/IEC 2382-36:2019, identical)**

Dokument esitab õppimise, hariduse ja koolituse valdkonna sõnavara terminid ja määratlused, hõlbustamaks rahvusvahelist suhtlust valdkonnas. Ühtlasi tuvastab ja esitab see dokument sidusa ja ühtlustatud lähenemise tagamiseks sõnavara sisemised seosed.

## **EVS-ISO/IEC 27033-1:2024**

### **Infotehnoloogia. Turbemeetodid. Võrguturve. Osa 1: Ülevaade ja mõisted**

#### **Information technology - Security techniques - Network security - Part 1: Overview and concepts (ISO/IEC 27033-1:2015, identical)**

ISO/IEC 27033 see osa annab ülevaate võrguturbest ja sellega seotud määratlustest. Standard määratleb ja kirjeldab võrguturbega seotud mõisteid ja annab võrguturbe halduse juhiseid. (Lisaks sidelinkide kaudu edastatava teabe turbele puudutab võrguturve seadmete turvet ning seadmete, rakenduste/teenuste ja lõppkasutajatega seotud haldustegevuste turvet.) See osa puudutab kõiki, kes on seotud mingi võrgu omamise, käituse või kasutamisega. Lisaks juhtidele ja ülematele, kellel on erikohustused infoturbe ja/või võrguturbe ja võrgu käituse alal või kes vastutavad organisatsiooni üldise turbekava ja turvapolitiika väljatöötamise eest, kuuluvad nende hulka kõrgemad juhid ja muud mittetehnilised juhid või kasutajad. See puudutab ka kõiki võrguturbe arhitektuuri aspektide plaanimises, kavandamises ja teostamises osalejaid. Lisaks annab ISO/IEC 27033 see osa: — juhiseid selle kohta, kuidas tuvastada ja analüüsida võrgu turvariske ning määräata selle analüüs põhjal võrgu turvanõuded; — ülevaate meetmetest, mis toetavad võrgu tehnilise turbe arhitektuure ja nendega seotud tehnilistest meetmetest, ning ka nendest mittetehnilistest ja tehnilistest meetmetest, mis on rakendatavad mitte vaid võrkude puhul; — sissejuhatava kirjelduse kvaliteetsete võrgu tehnilise turbe arhitektuuride saavutamise ning tüüpiliste võrgustsenariumite ja võrgu tehnoloogiliste aladega seotud riski-, kavandamis- ja reguleerimisaspektide kohta (üksikasjalikumalt käsitlevad neid ISO/IEC 27033 järgmised osad), ning lühida küsimuste käsitluse, mis on seotud võrguturbe meetmete teostamise ja käitusega ning nende teostuse pideva seire ja läbivaatusega. Kokkuvõttes annab see osa ülevaate standardist ISO/IEC 27033 ning teekaardi selle standardi teiste osade jaoks.

# STANDARDIPEALKIRJADE MUUTMINE

Selles jaotises avaldame infot Eesti standardite eesti- ja ingliskeelsete pealkirjade muutmise kohta ja ingliskeelsete pealkirjade tõlkimise kohta.

Lisainformatsioon või ettepanekud standardipealkirjade ebatäpsustest [enquiry@evs.ee](mailto:enquiry@evs.ee).

## UUED HARMONEERITUD STANDARDID

Toote nõuetele vastavuse seaduse kohaselt avaldab Eesti Standardimis- ja Akrediteerimiskeskus oma veebilehel ja ametlikus väljaandes teavet harmoneeritud standardeid ülevõtva Eesti standardite kohta.

Harmoneeritud standardiks nimetatakse EL-i õigusaktide kontekstis Euroopa Komisjoni standardimisettepaniku alusel Euroopa standardimisorganisatsioonide koostatud ja vastu võetud standardit.

Harmoneeritud standardite kasutamise korral eeldatakse enamiku vastavate õigusaktide mõistes, et standardi kohaselt valmistatud toode täidab õigusakti olulisi nõudeid ning on üldjuhul kõige lihtsam viis töendada õigusaktide oluliste nõute täitmist. Harmoneeritud standardi täpne tähdus ja õiguslik staatus tuleneb siiski iga õigusakti tekstist eraldi ning võib õigusaktist olenevalt erineda.

Lisainfo:

<https://ec.europa.eu/growth/single-market/european-standards/harmonised-standards>

Eesti Standardimis- ja Akrediteerimiskeskus avaldab ametlikus väljaandes harmoneeritud standardeid ülevõtva Eesti standardite kohta järgmist infot:

- harmoneeritud standardi staatuse saanud Eesti standardid
- harmoneeritud standardi staatuses olevate Eesti standardite kohta avaldatud märkused ja hoiatused, mida tuleb standardite järgimisel arvestada
- harmoneeritud standardi staatuse kaotanud Eesti standardid

Info esitatakse vastavate õigusaktide kaupa.
