EESTI UUDISED

5. novembril toimus Standardikeskuse Nõukoja koosolek. Nõukoja uueks liikmeks võeti Ehitusmaterjalide Tootjate Liidu tegevdirektor Enno Rebane ja muutus Standardikeskuse esindaja Nõukojas. Uueks esindajaks nimetati TK spetsialist Heiki Aasmann.

Küideti heaks EVS/TK 19 Kõrgepinge registreerimine ja järgmiste algupäraste standardite koostamisetepanekud:

- Ehituskonstruksioonide koormused. Osa 1-5: Üldkoormused. Termilised koormused
- Ehituskonstruksioonide koormused. Osa 2: Sildade transpordikoormused
- Teraskonstruksioonide projekteerimine. Osa 1-1: Üldist. Üldised reeglid
- Müüritiseelementide esitatavad nõuded. Osa 1: Krohvi- ja kipskrohvisegud
- Müüritiseelementide esitatavad nõuded. Osa 2: Müüritismört
- Müüritiseelementidele esitatavad nõuded. Osa 1: Savitellistest müüritise elementid
- Müüritiseelementidele esitatavad nõuded. Osa 2: Silikaattellistest müüritise elementid
- Müüritiseelementidele esitatavad nõuded. Osa 3: Betoonplokkidest müüritise elementid (raskebetoon ja kergbetoon)
- Müüritiseelementidele esitatavad nõuded. Osa 4: Autoklaavitud mullbetoonplokkidest müüritise elementid
- Müüritiseelementidele esitatavad nõuded. Osa 5: Kiviplokkidest müüritise elementid
- Ehitusprojekti seletuskiri
- Raudtee reisiplatvormid

20. oktoobril toimus Standardikeskuses seminar "Standardimine ehitussektoris". Seminar oli ehitusvaldkonnas tegutsevatele ettevõtetele ja selle eesmärk oli anda üldine ülevaade EN Eurokoodeksitest, uuest ehitusseadusest ning standardimisprotsessist ehitusvaldkonnas. Lektorid olid Malle Port ja Janne Kurg Majandus- ja Kommunikatsiooniministeeriumist, Enno Rebane Eesti Ehitusmaterjalide Tootjate Liidust, EVS/TK 15 esimees Kalev Koort, EVS/TK 2 esimees Toomas Laur ja Kaido Rajur Eesti Standardikeskusest.

12. novembril külastas Norra bi-lateraalse projekti raames EVSi AS Pronormi tegevjuht Magne J. Kalstad. AS Pronorm on Norra Standardi Assotsiatsiooni sõsarettevõtte, mis tegeleb Norra ja rahvusvaheliste standardite müügiga. Visiidi eesmärgiks oli tutvustada standardite müügi trende ja tehnoloogiaid Norras. Diskussioonide ja arutelude abil jõuti ka määratleda standardite müügi võimalusi ja -viise EVSi.

Sama projekti raames külastas 22. novembril EVSi IT süsteemi konsultant Terje Martinsen Norra Standardi Assotsiatsioonist. Terje Martinseni visiit oli suunitletud tutvustamiseks Norras kasutatavat andmebaasi lahendust ning tutvumaks EVSi standardite andmebaasiga edasiste lahenduste väljatöötamiseks.

Kätte on jõudnud aasta viimane kuu, mil kiiruga lõpetatakse veel selleks aastaks planeeritud, vaadatakse tagasi tehtule ja tehakse plaane uueks aastaks. Standardikeskuse jaoks oli lõppev aasta teguderohke. Laienes standardimise kandepind - loodi seitse uut tehnilist komiteed, koostööpartnerite arv suurenes kolme võrra. Lõplike kokkuvõtete tegemine seisab küll alles ees.

Ka rahvusvahelistes ja Euroopa standardiorganisatsioonides tehti möödunud aastast kokkuvõtteid ja plaane järgmiseks. Eelmises numbris kirjutasime ISO Peaassambleest, selles numbris on Sven Kasemaa sulest lugeda CEN Aastakoosolekust, loodetavasti järgmisest saate ülevaate Pekingis toimunud IEC Peaassambleest. Infotehnoloogia tehnilisel komiteel täitus oktoobris viies tegevusaasta. Komitee jätkab aktiivset ja edukat tegutsemist nagu võite lugeda TK sekretäri Taavi Valdlo artiklist.

Raamatukogutöö standardimise ISO tehnilise komitee koosolekust kirjutab Anu Nuut ning võrdlusmõõtmistest vihtide kalibreerimisel teevad ülevaate Viktor Vabson ja Toomas Kübarsepp. Vaadake ka oma valdkonna arvamusküsitlusele pandud standardikavandeid.

Soovime et saaksite oma aastalõpu tööde ja tegevustega varakult valmis, siis on aega ka pühi pidada!

Anne Laimets
anne@evs.ee

Norra bi-lateralse projekti üldeesmärk on tugevdada vabatahtliku standardimise arengut Balti riikides. Projekti alameesmärgina võib nimetada rahvuslike standardiorganisatsioonide toimivuse ja protsesside parendamist, saavutamaks CEN/CENELEC täisliikmelisust. Projekti teine faas kestab 2003. aasta aprillini.

14. novembril kohtus Valgevene peakonsul Petr Krechko EVS tegevdirektor Sven Kasemaaga. Kohtumisel arutati EVS võimalikku koostööd Valgevene standardiorganisatsiooniga. Arvestades EVS'i ja üldisemas plaanis kogu Eesti arengut viimastel aastatel ning pürgimist Euroopa Liitu, on Eesti standardijatel juba hulgaliselt teadmisi ja kogemusi, mida Valgevene kolleegidega jagada.

25. - 27. novembril viibisid EVS'is SIDA projekti raames Rootsi Standardiinstituudi konsultandid Folke Hermanson Snickars ja Jan-Olof Gustavi. Kolme päeva jooksul arutati nii projekti üldist kulgu ja tegevusi, kui ka konkreetsemalt EVS teenuste paketi välja töötamist ning teenuste edasist levitamist. Visiidi käigus kohtuti Andreas von Uexkülliga Rootsi Suursaatkonnast, Mailis Pukoneniga Eurointegratsiooni Büroost, Ville Arumäega Eesti Masinatööstuse Liidust, Thea Palmi ja Ingrid Tavitsaga Majandus- ja Kommunikatsiooniministeeriumist ning Kristina Tshistovaga Eesti Kaubandus-Tööstuskoja Euroinfokeskusest. Projekti järgmises faasis on kavas koostada standardimise teadlikkuse suurendamise plaan ning koolitada EVS töötajaid pädevateks lektoriteks. Projekt lõppeb järgmise aasta veebruarikuus seminariga EL infokeskustele ning Eesti tööstuse esindajatele.

Teede ja Sideministri 31.10.2002 määrusega nr 71 kehtestati Raadiosaateseadmete kasutamise üldised nõuded TETRA standardile põhinevate operatiivraadioside mobiilterminalide klassile RTL, 12.11.2002, 125, 1828

§ 4. Tehnilised näitajad

(1) TETRA mobiilterminali tehniliste näitajate puhul lähtutakse tehnilise normi täitmiseks Euroopa Telekommunikatsiooni Standardite Instituudi (ETSI) standardi ETSI EN 303 035-1 nõuetest. Tehnilise normi täitmiseks võib lähtuda ekvivalentsetest standarditest või tehnilistest spetsifikaatidest.

(2) Otseside TETRA mobiilterminali tehniliste näitajate puhul lähtutakse tehnilise normi täitmiseks Euroopa Telekommunikatsiooni Standardite Instituudi (ETSI) standardi ETSI EN 303 035-2 nõuetest. Tehnilise normi täitmiseks võib lähtuda ekvivalentsetest standarditest või tehno spetsifikaatidest.

CEN AASTAKOOSOLEKUL

CEN Aastakoosolek toimus 9. - 11. oktoobril Lissabonis, Portugalis. Seekordne rõhuasetus oli väikeste ja keskmise suurusega ettevõtete (SME) osalemisel standardimises. Avasõnad lausus Portugali standardiorganisatsiooni direktor Carlos Canopa. Portugalis on firmasid ca 300000, millest 90% on SME-d.

Oma lühikeses avakõnes tõi CEN president C. Beckervordersandforth välja SME-de tähtsa rolli töökohtade looja ning innovaatiliste ideede rakendajana. Ohuks nimetas ta suurenevat bürokraatiat. Standardite väljatöötamisel on tähtsamaks suunaks teenuste standardimine, sest just teenindussfääris tegutseb suur osa SME-sid.

Ettevõtjate poolt esines ettekandega **Peter Vesterdorf** (Taani). Põhilised probleemid on seotud standardite tõlkimise ning selle alafinantseerimisega. Oma ettekandes tegi ta ettepaneku, et suuremad firmad võiksid toetada neile allhanke korras töid tegevate SME-de osalemist standardimises.

Standardite kasutamine tehnilises normis on tekitanud konflikti äri- ja riigihuvide vahel. Kui riigid on otsustanud rakendada uue lähenemisviisi põhimõtteid, siis peaksid nad mõtlema ka nende rakendamisele.

Ettevõtjaid ühendavate või koondavate ühenduste nagu **CECIMO** ja **FIEC esindajad** töid oma ettekannetes välja peamised takistused SME-de osalemisel standardimises. Märksõnadena jäid kõlama aja ja rahaliste ressurside nappus, vähene mõjuvõim, konsensuse saavutamise raskus koosolekul ja ebapiisavad teadmised CE märgistusest.

Ka Euroopa Komisjoni (EK) liikme **Erkki Liikanen'i** sõnavõtt oli adresseeritud väikestele ja keskmistele ettevõtetele. Hr Liikanen rõhutas, et standardijatel on täita tähtis roll regulatoorse baasi loomisel väikestele ja keskmistele ettevõtetele ning standardid on hädavajalikud e-Euroopa toimimiseks. EK toetuse prioriteetideks on tarbijate osalemine standardimises ning keskkonnakaitsega tegelevate huvipoolte kaasamine. Huvipakkuvaks võib pidada ka raportit "*European Commission report on European competitiveness*", millest selgub, et Euroopa konkurentsivõime jääb alla USA arengule ning ka tööjõu tootlikkuse näitajad on samuti kesisemad.

Hr Liikanen oli rahul, et standardimise huvitatud osapooled saavad osa võtta standardite koostamisest, kuid nentis ka, et sellest võimalusest ei olda nii teadlikud kui peaks olema. Probleemiks on ka standardite koostamisest osavõtu rahastamine.

Erkki Liikaneni sõnul asutas Euroopa Komisjon organisatsiooni

NORMAPME (*European Office of Craft/Trades and Small and Medium-sized Enterprises for Standardisation*), kes pakub SME-dele võimalust saada toetust osalemaks Euroopa standardimises.

NORMAPME on CEN toetajaliige.

Positiivselt märkis ta ka Euroopa standardite (EN) alla kuuluvaid kiiremalt valmivad standardilaadseid dokumente nagu nt *CEN Workshop Agreement (CWA)*, mis on juba tõestanud oma väärtust info- ja sidetehnoloogias ning mitmes teises CEN käsitusallas.

CEN juhtimine ja aruandlus

Tegevusaruande põhjal on CEN liikmete arv täna suurenenud juba 22-ni.

2003. a jaanuarist saavad täieõiguslikuks CEN liikmeks Ungari ja Slovakkia standardiorganisatsioonid. Kolmteist Kesk- ja Ida-Euroopa riiki saavad loodetavasti CEN liikmeteks lähemate aastate jooksul.

Pidevalt on probleemiks olnud Euroopa standardite väljatöötamise aeg. Hetkel on EN-i keskmine koostamisaeg viis ja pool aastat, mida soovitakse lühendada kolmele aastale. CEN juhtimiskeskuses rakendatakse käesoleval ajal ISO 9001 kvaliteedijuhtimissüsteemi, mille välisaudit peaks toimuma järgmise aasta alguses.

Uus elektrooniline häältesüsteem viibib, see projekt loodetakse lõpetada 2003. a alguses. Plaanitakse välja anda käsiraamat standardite kasutamisest riigihangetes (kaitsetööstus, sõjavägi), mille väljatöötamist finantseeris Euroopa Komisjon.

Üheks aastakoosoleku teemaks oli CEN uus juhtimissüsteem

Uus juhtimissüsteem on vajalik uute liikmete integreerimiseks, keskendumiseks põhitegevusele ja ressurside optimeerimiseks, aga ka suurte ja väikeste liikmete tasakaalustatud esindatuse tagamiseks.

CEN liikmete grupid on samuti uued. Nüüd on CEN-il liikmeid nelja liiki: täisliikmed, liitunud liikmed, partner- ja kirjavahetajaorganisatsioonid. Uueks grupiks on partnerorganisatsioonid. Need organisatsioonid, kes on huvitatud Euroopa standardite kasutuselevõtust, kuid kes ei saa/soovi mingil põhjusel saada CEN liikmeks.

Peassamblee vaheaegadel juhib CEN-i **Administratiivnõukogu** (*Administrative Board CA*), mis koosneb kõikide liikmesriikide esindajatest. Kohtumised toimuvad kaks korda aastas, enamus otsuseid võetakse vastu kirja teel.

Edaspidi hakkavad seda nõukogu nõustama kaks konsultatiivkomiteed, kes valmistavad otsused ette. Enamus otsuseid on kavas vastu võtta elektrooniliselt.

Finants konsultatiivkomitee asepresidendi juhtimisel hakkab ette valmistama ja jälgima CEN finantspoliitikat, eelarvet, arveid, makse (s.h liikmemakse) ning CEN ja selle liikmete ning Euroopa Komisjoni ja EFTA vahelisi finantssuhteid. See komitee hakkab jälgima ka standardite müügipoliitikat.

Komitee liikmete arv on piiratud, nad valitakse kaheks aastaks kaalutud häältega ning nimetatakse CA otsuse alusel.

Kuni 2002. a lõpuni juhatab selle komitee tööd D. Lazenby (Ühendkuningriik) ja alates 2003. a J.A.Wesseldijk (Holland), kes on ka ühtlasi alates jaanuarist 2003 kuni detsembrini 2005 CEN-i asepresident finantside alal.

Välispoliitika konsultatiivkomitee asepresidendi juhtimisel jälgib CEN välispoliitikat seoses Euroopa poliitilise keskkonnaga. Komitee valmistab ette vastuseid EÜ ja EFTA initsiatiividele ja koostööd teiste Euroopa ja rahvusvaheliste organisatsioonidega.

Ta jälgib rahvuslike standardiorganisatsioonide "välissuhete võrgustikku". Komiteed juhib AFNOR (Prantsusmaa) peadirektor A.Bryden.

Hetkel kui see kirjutis trükki läks, on teatavaks saanud, et A. Bryden valiti ka ISO uueks peasekretäriks. Vt ka lk 18

Kolmas CEN alussammas on **Tehnika-nõukogu** (*Technical Board*), kes tegeleb standardimisprogrammiga, ja mida juhib J. Holmblad (Taani).

CEN uue struktuuri eesmärk on paremini keskenduda oma põhitegevusele - Euroopa tööstuse ja teaduse arenemisele kaasaaitamisele vastavate standardite kiirema koostamisega. Euroopa standardid on olulised tegurid ühisturu arengus ja Euroopa säästvas arengus.

Edasist muudatust plaanitakse kaalutud häälte ja otsuste sidumise osas ning liikmemaksude struktuuris, et saavutada täpsem tasakaal liikmemaksu suuruse ja häälte arvu osas.

Allkirjutanu hinnangul võib see tähendada aastatel 2005 - 2006 CEN-i väiksemate liikmete liikmemaksude suurenemist.

Kinnitati veel CEN 2001. aasta majandustulemused, mis olid kergelt positiivses trendis võrreldes eelarvega.

Kiideteti heaks 2003. aasta eelarve. Liikmemaksu ühiku väärtus jäi aastaks 2002 samale tasemele eelmise aastaga.

Järgmise aasta CEN Aastakoosolek toimub 10. oktoobril Berliinis.

Liitunud liikmete ümarlauad, mida juhatab Albaania standardiorganisatsiooni direktor A. Nati, toimus 11. oktoobri ennelõunal.

CEN esindajate poolt korrati üle struktuurimuudatuste ning konsultatiivkomiteede roll. Teavitati liikmemaksude läbivaatamise kavast. Kusjuures liikmemaksude suuruse määramiseks

soovitakse need siduda kindlate näitajatega, nagu SKP, elanike arv jne.

Arutati, kas on vaja jätkata seniste CEN liitunud liikmete ümarlauaga.

Senise praktika kohaselt toimus kaks liitunud liikmete koosolekut aastas. Üks koosolek enne CEN ümarlauda, mis oli korraldatud ühe kandidaatliikme poolt ning teine oli CEN aastakoosoleku raames korraldatud ümarlaud.

Otsustati, et ei jätkata kolm aastat tagasi CEN kandidaatriikide poolt alustatud liitunud liikmete ümarlauaga ning piisab ühest kohtumisest CEN aastakoosoleku ajal.

Kohtumisel tegin ettepaneku luua piiratud juurdepääsuga infovahetussüsteem (Livelink'is) CEN kodulehele, et liitunud liikmed saaksid sinna edastada oma eduaruanded ning kõikidel

CEN liikmetel oleks võimalik igal ajal tutvuda konkreetse riigi olukorraga.

Ettepanek leidis toetust ning edasiste sammude eest jäi vastutama koosoleku juhataja.

Käesolevaks ajaks ei ole täiendavat informatsiooni veel edastatud.

Lisainfot ja ettekannete materjale saab vaadata CEN kodulehelt

http://www.cenorm.be/news/agm_2002/agm.htm

Sven Kasemaa

EVS tegevdirektor

Pildil: CEN aastakoosolekust osavõtjad

UUS TEAVE KUTSUB KAASA LÖÖMA: IT STANDARDIMISE TEABEPÄEV

Eesti IT standardimise tehnilise komitee EVS/TK 4 eestvõtmisel toimus 15. novembril 2002 Küberneetika Majas IT standardimise teabepäev.

Kavas oli kaheksa pooltunnist ettekannet.

EVS/TK4 on tegutsenud juba 5 aastat, asutatud mäletatavasti 29. oktoobril 1997. Seni on TK 4 ettevalmistamisel ilmunud 43 Eesti standardit. Kristel Schwede Eesti Standardikeskusest pani teabepäeval üles väikese näituse senivalminud IT valdkonna standarditest ja muudest Standardikeskuse materjalidest. Huvilistel oli samas võimalus oste vormistada. Tänavu on TK 4 ettevalmistamisel Standardikeskusele üle antud veel alljärgnevad viis standardikavandit:

- ISO/IEC 13335-5 Infotehnoloogia. Infoturbe halduse suunised. Osa 5: Võrguturbe halduse suunised
- ISO/IEC TR 15504-9 Infotehnoloogia. Tarkvaraprotsesside hindamine. Osa 9: Sõnavara.
- ISO/IEC 9126-1 Tarkvaratehnika. Toote kvaliteet. Osa 1: Kvaliteedimudel
- ISO/IEC TR 9294 Infotehnoloogia. Tarkvara dokumentatsiooni halduse suunised
- ISO/IEC 17799 Infotehnoloogia. Infoturbe halduse menetluskoodeks

Infotehnoloogia standardimisalane aktiiv on Eestis välja kujunenud, kümnekond inimest on eriti tublid. Postiloendis *stand@riik.ee* on hetkel 56 liiget. Väärib märkimist, et IT standardimine on leidnud oma koha meie juhtivate kõrgkoolide õppekavades. Tallinna Tehnikaülikooli Informaatikainstituudi tarkvaratehnika õppetooli õppekavas on professor Jaak Tepandi (EVS/TK4

esimees) loengutsükkel "Tarkvara-kvaliteet ja standardid". Tartu Ülikooli Arvutiteaduse Instituudis loeb õppejõud Uuno Puus kursust "Informaatika standardid". Ka programmeerimiskeelte, infoturbe, arvutigraafika jm õpetamise juures ei pääse mööda standarditest. Mitmed viimase aja doktorid ja magistrid on teemavalikul pöördunud IT standardimise poole. IT standardimises osalemine on saamas ka Eesti teadlastele ja üliõpilastele üheks missioonitundelise ühiskondliku aktiivsuse ilmutamise võimaluseks.

Ka kõnesolev teabepäev oli suunatud standardimisalase töö ja mõtte elavdamisele.

Uuno Vallner Riigi infosüsteemide osakonnast tegi ettekande "Kodaniku IT keskkond: reeglid ja standardid infosüsteemidele". Kodaniku IT keskkond (KIT) on kõigile kodanikele Interneti veebilehitseja kaudu kasutatav infotehnoloogiliste vahendite kogum turvaliseks suhtluseks riigi ja kohalike omavalitsuste asutuste, eraettevõtete ning kolmanda sektori institutsioonide infosüsteemidega. Riigiasutuste veebilehete vormistamisel soovitatakse järgida W3C konsortsiumi töörühma Web Content Accessibility Guidelines Working Group soovitusi, vaata <http://www.w3.org/WAI/>

Raivo Ruusalepp Eesti Äriarhiivist rääkis dokumendihalduse seostest teiste infosüsteemidega. Ta lahkas mitmepalgelist dokumendihaldust, tutvustas erinevaid "haldamise" süsteeme. Saime teada, mis asi on *electronic records management system (ERMS)*. Eesti keelde tõlgitav dokumendihalduse standard ISO 15489 aitab määratleda nõudeid ka

elektrooniliste dokumendihalduse süsteemide funktsionaalsusele.

Arne Ansper (AS Cybernetica) tutvustas digitaalallkirja standardikavandeid. Digitaalallkirja rakendamiseks on tarvis luua komplekt standardeid, mis määratleks digitaalallkirja ning selle osade (ajatempel, kehtivustõend, signatuur) vormingu ja tähenduse ning protokollid seotud teenuste (valideerimisteenus, ajatempliteenus) kasutamiseks. Lähtuda saab mõistagi olemasolevatest rahvusvahelistest standarditest ja standardikavanditest ning valminud digitaalallkirja juurutamise strateegilisest plaanist. Asi peab olema tehniliselt piisavalt lihtne ja arvestama Eesti tegelikku olukorda. Seejuures tuleks tagada sõltumatus ühest kindlast süsteemide tarnijast. Töö tulemusena on valminud neli standardikavandit, mida ka lähemalt tutvustati. Kavandid on plaanis veel sel aastal arvamusküsitlusele saata.

Jüri Kivimaa Ühispanngast rääkis astmelisest etalonturbest. Jutt on valdkonnast, mis seni infoturbe standarditega korralikult katmata. Ettekandja tõi välja, mis see astmeline etalonturbe siis tegelikult on ja milleks see kasulik on. Süsteem peab olema mõistliku ressursikuluga realiseeritav. Infoturbe on jätkuvalt kuum teema ja mitmed eksperdid ennustavad valdkonda panustamise kasvu lähiaastatel. Ettekanne aitas mõtestada etalonturbe ja turvaklasside seoseid tegeliku infoturbe korraldamisega sellises nõudlikus valdkonnas, nagu pangandus.

TTÜ professor Tanel Tammet tutvustas vaba tarkvara soovitusi avaliku halduse tarvis. Vaba tarkvara kasutamise analüüsi, soovitude ja seadusandlusega tegeldakse paljudes riikides. Ettekanne andis ülevaate soovitud vaba tarkvara kasutamiseks Eesti riigiasutustes. Soovitused on kättesaadavad <http://www.eik.ee/atp/>.

Tegemist on esialgse töödokumendiga, mis on avatud edasiseks aruteluks. Aktiivselt on soovitusi kommenteerima asunud peamine "oponent" Microsoft, põhjalikuma ekspertiisi valmistab ette Jan Willemson. Lähiajal on plaanis tulemused kokku võtta ja võimalusel ka avalikkust teavitada. Soovitude tellijaks on Eesti Informaatikakeskus. Soovitused on mõeldud alusmaterjalina informaatikastrateegia ja edasiste konkreetsete juhendite koostamiseks.

TTÜ reaalajasüsteemide professor Leo Mõtus peatus ühtse mudelikeele UML (*Unified Modeling Language*), tema profiilide ja standardimise seostel. Ettekandja püstitas huvitavad küsimused:

- Kas UML on omaette tervik või on ta MDA (*Model Driven Architecture*) osa?
- Miks UML on laialt levinud? Kus teda kasutada?
- Miks UML-le profiilid?

Ettekandja leidis põnevaid seoseid teemal tarkvara patendid, standardimine ja tegelik elu. Et areng ei pidurduks tuleb standardida "õiget asja". Tarkvara patendid on siin omamoodi pidurid. Tarkvaraprotsessiga seotud standardid ei ole õnneks seni olnud seotud tasuliste patentidega (erinevalt mitmetest tarkvaratoodetest). Eesti tarkvaratööstus ja -haridus peaks rohkem tähelepanu pöörama tarkvaraprotsessile.

Jaano Inno Eesti Telefonist iseloomustas traadita LAN standardeid. Ta selgitas WiFi olemust, iseloomustas standardiperekonda 802.11 ning andis ülevaate praegustest ja tulevastest traadita kohtvõrgu standarditest. Euroopa standardimine, eriti ETSI, on nimetatud valdkonnas aktiivne. Ettekandja käsitles ka traadita kohtvõrgu andmeturvalisust ning eritles vastavaid nõudeid. Traadita kohtvõrgude kiire levi tuhinas kipuvad infoturbe küsimused tahaplaanile jääma.

Mitmesugused lahendused (kuni krüptimiseni välja) võimaldavad siiski ka traadita kohtvõrkudes tagada nõutava turvataseme.

Peep Krusberg Maa-ametist rääkis standardimisest geoinformaatikas. Ta tutvustas ruumiandmete ja GISide eripära, rääkis valdkonna standardimise arengust ja seni koostatud peamistest rahvusvahelistest standarditest. Ettekandja iseloomustas lihtsate nähtuste spetsifikatsioone ja tegi põneva ekskursi veebikaardi teenuste maailma. Interneti vahendusel reaajas olid ettekandjal näidata tõesti põnevad demod tarkvaralistest lahendustest veebi geoinfo päringutest ning eri infosüsteemide integratsioonist.

Kokkuvõtteks. Teabepäevale oli registreerunud üle viiekümne kuulaja. Töö oli tihe, arutelu elav. Ettekanded olid tõesti huvitavad ja õpetlikud, sisaldasid palju uut infot.

Teabepäeval esitatud materjalid olid standardimisega rohkem ja sisulisemalt seotud, kui oodata võis.

Oli põnev õhtupoolik. Kohvipausil lõikasime lahti tähtpäevatoridi. Sarnase seminari korraldamine on plaanis ka järgmisel aastal, kohtumiseni aasta pärast.

Teabepäeva materjale vaata <http://www.cyber.ee/infoturve/ressursid/koolitus/20021115/>

Taavi Valdlo
EVS/TK 4 sekretär

RAAMATUKOGU STATISTIKA JA TÖÖ TULEMUSLIKKUSE HINDAMINE

Võtsin osa Stockholmis 26. - 30. oktoobrini toimunud ISO/TC 46 Informatsioon ja dokumentatsioon 8. alamkomitee Kvaliteet – statistika ja töö tulemuslikkuse hindamine kolme tööruhma tööst.

Raamatukogu töö tulemuslikkuse indikaatorite tööruhma koosolekul esitati seisukohad raamatukogustatistika ning töö tulemuslikkuse mõõtmise ja toimivusindikaatorite rahvusvaheliste standardite ettevalmistamise etappide kohta. Anti ülevaade ISO/FDIS 2789 lõppversiooni muudatustest ning vastuvõtu protseduuridest.

Antud dokument oli 2002. aastal ka RRi standardimise tööruhmas põhiline töös olev dokument, mistõttu saadud informatsioon pakkus huvi. Saime kinnitust lõppversiooni vastuvõtmise ning muudatuste kohta ja võime viia lõpule ISO 2789 eestikeelse kavandi koostamise, et esitada see Eesti Standardikeskusele.

Teine arutlusel olev dokument oli standardi ISO 11620 tulemuslikkuse toimivusindikaatoreid käsitlev muudatus - *Information and Documentation. Library Performance indicators AMENDMENT 1: Additional performance indicators for libraries.*

Kõne all oleva dokumendi eestikeelne versioon on ettevalmistamisel ja tuleb arutlusele RRi standardimise tööruhmas, et kavandi projekt esitada Standardikeskusele avaldamiseks EVS-ISO 11620 muudatusena.

Kolmas arutlusel olev dokument oli elektrooniliste teenuste mõõtmismetoodikat käsitlev lisa ISO/DTR 20983 rahvusvahelisele standardile ISO 11620 *Information and Documentation. Performance indicators for electronic library services.* Esitati täiendused ja parandusettepanekud Pariisi nõupidamiselt 2002. aasta märtsis. Dokumendi lõppversioon läheb hääletamisele k.a

novembris, vastuvõtmisele detsembris. 2003. aastal saavad rahvuslikud standardiorganisatsioonid õiguse alustada rahvusdokumendi ettevalmistamist, siis saab ka RRI standardimise töörühm alustada tööd elektroonilise keskkonna mõõtmise toimivusindikaatorite väljatöötamisega. Töörühma poolt tehti ettepanek kogu standardi ISO 11620 ülevaatamiseks ja antud standardisse ka kvaliteedi mõõtmismetoodika lülitamiseks, mis käsitleks juba laiemalt, komplekselt kogu raamatukogutöö tulemuslikkuse sisendi ja väljundi mõõtmismetoodikat. Antud muudatusettepaneku realiseerimist alustatakse töörühmas 2004. aastal koostöös IFLA statistika sektsiooni, Eurostat'i ja Northumbria Ülikooliga. Samuti peeti oluliseks kavandada uute kvaliteedi hindamise toimivusindikaatorite ja mõõtmismetoodika testimist ning selleks uute Euroopa projektide algatamist.

Eesti raamatukogunduse standardimiskavasse kinnitatud dokumendid leidsid heakskiitu ja leiti, et õigel ajal on alustatud rahvusstandardite koostamist raamatukogustatistika ja raamatukogutöö kvaliteedi mõõtmise toimivusindikaatorite ning mõõtmismetoodika väljatöötamiseks.

Trükitoodangu hinna indeksi koostamismetoodika töörühma koosolekul oli arutluse all rahvusvaheline standardi *ISO 9230 Information and Documentation - Price indexes for books and serials purchased by libraries* ülevaatamine. Nimetatud standard on vastu võetud 1991. aastal, vananenud on terminite määratlused ning käsitlus, samuti puudub elektroonilise kirjastamise hinnakujunduse metoodika ja uute terminite määratlus. Esialgelt viiakse läbi olukorra küsitlus eri riikides, analüüsitakse olukorda ja koostatakse situatsiooni kirjeldus koos vajalike nõudmiste ja ettepanekutega, seejärel toimuvad arvamusküsitlused ja koostatakse uue dokumendi kavand, mille arutelu planeeriti 2003. aasta maikuuks.

Eestis tuleks kavandada antud standardi uustöötlus aastasse 2005. Pariisi nõupidamisele 2002. aasta märtsis. Vajalik oleks koostöö korraldamine selles osas RRI, Kirjastajate Liidu ja Eesti raamatukogude ning kirjastajate vahel. Standardi terminoloogia ja metoodika on tihedalt seotud kahe eelpoolnimetatud standardi ISO 2789 ja ISO 11620 terminite määratluste ning käsitlustega. Tööd võiks korraldada selle standardi uustöötusel RRI standardimise töörühm ja peakoordinaatoriks olla Eesti Rahvusraamatukogu kui sundeksemplari ja trükitoodangu statistika ning rahvusbibliograafikeskus.

Trükitoodangu ja elektroonilise meedia statistika töörühmas oli arutluse all rahvusvahelise standardi *ISO 9707 Information and Documentation - Statistics on the production and distribution of books, newspapers, periodicals and electronic publications* uustöötlus ja muudatusettepanekud. Nimetatud standard on vastuvõetud 1991. aastal, terminid ja määratlused on aegunud. Raamatukogud komplekteerivad elektroonilisi väljaandeid ja saavad ka sundeksemplari elektroonilistest väljaannetest, kogu elektroonilise kirjastamise toodang peaks kajastuma kirjastamise statistikas. Arutati läbi eri riikide arvamused ja ettepanekud ning novembriks 2002 koostatakse terminite ning määratluste uus projektdokument, vaadatakse üle dokumentatsiooni klassifikatsioon, bibliograafia ja viiakse sisse vajalikud muudatused. Standard võiks kujuneda ka üheks RRI standardimise töörühma uustöötuse objektiks aastal 2005, kuna RR on vastutav trükitoodangu statistika korraldamise eest. Elektroonilise kirjastamise statistika arvestusaluste kehtestamisel kujuneb see standard alusdokumendiks. Seni on RR lähtunud UNESCO'le statistiliste andmete esitamisel kehtivast standardist

ISO 9707:1991. Eesti kommentaarid ja muudatusettepanekud said esitatud ja koostöö selles osas töörühmaga jätkub. Koostöö Rootsi Standardiinstituudi SIS ja ISO/TC 46 **Informatsioon ja Dokumentatsioon** 8. alamkomitee **Kvaliteet** töörühmadega WG 4, WG 5 ja WG 6 oli väga kasulik, andes uut teavet teiste riikide kogemuste kohta ning ülevaate antud valdkonnas uustöötlustele tulevatest standarditest, mis omakorda on juhiseks RRI standardimise töörühmale järgmiste aastate tegevusplaanide koostamisel ning Eesti standardikavandite uustöötluste lülitamisel standardimise riiklikesse kavadesse.

Lisaks sai töörühmade töö käigus uut teavet uue standardi kavandi

ISO/DIS 15511 Information and Documentation. International Standard Identifier for Libraries and Related Organizations (ISIL) ning ISO/TC 46 tegevuskava

ISO/TC N 1621: 2002.09.19 kohta.

Teavet jagati ka töös olevate standardite tehniliste spetsifikatsioonide, ISO TC serveri kasutuse ja tehnilise komitee töös osalemise protseduurireeglite kohta. Eestilt oodatakse enam aktiivsust ISO/TC 46 töös osalemises ning eksperdi (ekspertide) määramist töörühmadesse.

Nõupidamised pakkusid väga kasulikku teavet RRI standardimise töörühma töö korralduseks, nimetatud koosolekutest teavitatakse standardimise töörühma liikmeid ning Eesti Standardikeskust.

raamatukogunduse osakonna juhataja

RRI standardimise töörühma juht

ASFALDIPÄEV

"Kas Eesti teed viivad Euroopasse?" selline intrigeeriv küsimus oli 19. novembril Tallinnas, Sakala Keskuses toimunud Eesti Asfaldiliidu XXII ASFALDIPÄEVA motoks.

Teedeehitusliku tegevuse aluseks on normid ja standardid. Päeva esimesel poolel anti ülevaate standardimise korraldusest Eestis. Püüdlusega saada Euroopa Liidu liikmeks kaasneb nõue kasutusele võtta Euroopa Liidu n-ö mängureeglid. Insenerialadel on nendeks eelkõige standardid. Paljud Eesti standardid on tiitellehe meetodil üle võetud Euroopa standardid, st pealkiri on tõlgitud eesti keelde, kuid standardi sisu on ingliskeelne. Standardite tõlkimine on vaevarikas, nõuab erialase sõnavara tundmist, tekst peab olema juriidiliselt üheselt mõistetav. Kuidas vältida formaalsust ja ummikusse

sattumist? Mis on juba tehtud ja mis teoksil?

Põhiettekanade standardimise korraldusest Eestis tegi Eesti Standardikeskuse tegevdirektor Sven Kasemaa. Ülevaate teedeehituses kasutatavate materjalide - bituumensideainete, asfaltbetoonsegude ja kivimaterjalide standarditest andsid TTÜ Teedeinstituudi lektor Vello Mespak ja Eesti Ehitusmaterjalide Tootjate Liidu tegevdirektor Enno Rebane. Ülevaate tsementide, betoonide ja teedeehitusliku tsemendilaadse teesideaine standarditest tegi TTÜ Ehitustootluse Instituudi direktor Toomas Laur.

Päeva teine osa oli pühendatud teetöödele Eesti nn Euroteedel - VIA BALTICA-I ja Tallinn - Tartu - Luhamaa maanteel.

Eesti Asfaldiliit on mittetulundusühing, mis ühendab vabatahtliku liikmeks oleku alusel asfalditöödega tegelevaid Eestis registreeritud juriidilisi isikuid ja üksikisikuid. Liit asutati 05. juunil 1991.a.

Eesti Asfaldiliidul on seisuga 01. november 2002 26 liikmesettevõtet ning 11 üksikliiget.

Asfaldipäevast sai osa 125 spetsialisti.

Asfaldiliidu pressiteate põhjal

NOVEMBRIKUU STANDARDID

EVS-EN 499:2002 Keevitusmaterjalid. Kattega elektroodid legerimata ja peenterateraste käsikaarkeevituseks. Liigitamine.

Standard määratleb liigitamistingimused kattega elektroodidele ning keevismetallile legerimata ja peenterateraste keevitamiseks minimaalse tõmbe-tugevusega 500 N/mm² keevitatud olekus.

EVS-ISO 2108:2002 Informatsioon ja dokumentatsioon. Rahvusvaheline raamatu standardnumber (ISBN)

Standardi eesmärk on raamatute identimissüsteemi kasutamise koordineerimine ja standardimine. Rahvusvaheline raamatu standardnumber (ISBN) on ainuomane tunnusnumber, mis on antud teatud kirjastaja/väljaandja kirjastatud või välja antud raamatule või mõnele muule monograafilisele väljaandele. Standardis määratakse rahvusvahelise raamatu standardnumbri struktuur ning numbri asukoht väljaandel. Seda standardit saab rakendada raamatute ja teiste monograafiliste väljaannete puhul, nagu trükitud raamatud ja brošüürid (sealhulgas eri köited või formaadid), multimeedia- jt meediaalased väljaanded, kaasa arvatud õppeotstarbelised filmid ja videod ning slaidid, kassettraamatud, arvutitarkvara, elektroonilised väljaanded, mikrovormid, maakaardid ja Braille' kirjas väljaanded. Jadaväljaanded, muusikahelisalvestised ja nooditrükised kuuluvad teiste identimissüsteemide valdkonda. ISBN-i kasutamise erioma-

seid üksikasju käsitletakse juhendis, mida väljastab standardi registreerimisteenistus.

Eesti standardi märkus. *ISBN Users Manual. International edition. Fourth, revised edition 2001* on kättesaadav Eesti ISBN Agentuuris ning Rahvusvahelise ISBN Agentuuri veebisaidil: <http://isbn-international.org/>

EVS-ISO 3297:2002 Informatsioon ja dokumentatsioon. Rahvusvaheline jadaväljaande standardnumber

Standardi eesmärk on jadaväljaannete ainukordset identimist võimaldava standardnumbri (ISSN) mõiste määratlemine ja selle numbri kasutamise edendamine. Iga rahvusvaheline jadaväljaande standardnumber (ISSN) on ühe kindla perioodilise väljaande ainuomane identimistunnus. ISSN on rakendatav nii varem ilmunud, praegu ilmuvatele kui ka lähemas tulevikus ilmuma hakkavatele jadaväljaannetele, olenemata nende kandjast. Jadaväljaannete hulka kuuluvad ajakirjad, ajalehed, aastaväljaanded (aruanded, aastaraamatud, teatmikud jms) ning ühingute päevaraamatud, seeriaväljaanded, uurimisaruanded, toimetised, kogumikud jne. Monograafiatel, tehnilistel aruannetel, heli- ja videosalvestistel ning nooditrükistel on oma numereerimissüsteemid, mistõttu selles standardis neid lähemalt ei käsitleta. Niisugused väljaanded võivad peale oma standardnumbri kanda ka ISSN-i juhul, kui nad on osa mõnest jadaväljaandest.

EVS-ISO 1087-1:2002 Terminoloogia-töö. Sõnastik. Osa 1: Teooria ja rakendus

Standard kehtestab terminoloogia-töö teooria ja praktika tarbeks põhiso- navara. Ta ei hõlma sõnavara, mis puudutab arvutirakendusi terminoloogia-töös; seda käsitleb ISO 1087-2. Kui ei ole öeldud teisiti, vastab esitusviis standardile ISO 10241.

EVS-ISO 1087-2:2002 Terminoloogia-töö. Sõnastik. Osa 2: Arvutira- kendused

Standard määratleb terminid keele- ja infotöötuse rakendusteks terminoloogia-töös ja terminograafias.

EVS-EN 386:2002 Liimpuit. Teos- tusnõuded ja põhilised tootmis- nõuded

Standard määrab nõuded liimpuidu komponentidele ning miinimum- tingimused liimpuidust konstruktsiooni- elementide valmistamiseks. Standard kehtib toodetele, mille lamellide lõplik paksus ei ületa 45 mm. Kuigi liimpuit valmistatakse enamasti okaspuidust, kehtib käesolev standard ka lehtpuidule eeldusel, et on olemas piisavalt teavet rahuldava liimliite saamiseks.

EVS-EN 516:2002 Katuse valmis- tarvikud. Juurdepääsupaigaldised, astmelaiud ja astmed

Standard käsitleb viilkatuse kande- tarindite külge püsivalt kinnitatud ehituselemente, mis on vajalikud seis- miseks või käimiseks katuse ülevaatuse, hoolduse või remondi ajal. Standard määrab põhimõtted, kasutatavad materjalid, kandevõimele esitatavad nõuded ja katsetuste ulatuse. Standard ei käsitle viilkatusele püsivalt kinnitatud redeleid.

EVS-EN 517:2002 Katuse valmis- tarvikud. Katuse turvakonksud

Standard käsitleb viilkatuse kande- tarindite külge püsivalt kinnitatud konkse, mis on ette nähtud katusekatjate redelite riputamiseks, töölavade toes- tamiseks, samuti inimese allakukkumist takistavate ohutusvahendite kinnita- miseks. Standard määratleb olulised mõõtmed, kasutatavad materjalid, nõuded kandevõime ja katsetuste kohta. Standard ei käsitle tarindeid, mis on ette nähtud ainult inimese allakukkumist takistavate ohutusvahendite kinnitami- seks (vt prEN 795).

EVS-EN 1096-1:2002 Ehitusklaas. Pinnatud klaas. Osa 1: Määratlused ja liigitus

Standard määratleb ehituses kasutatava pinnatud klaasi näitajad, omadused ja liigituse. Vastupidavuse määramiseks rakendatavad katsemeetodid ja - moodused on esitatud selle standardi teises ja kolmandas osas. Käesolev standard kehtib tavatingimustes kasutatavate olme- ja ärihoonete klaasimiseks kasutatava pinnatud klaasi kohta. Käesolev standard ei kehti järgmiste materjalide kohta: plastkiled klaasil, peeglid, emailklaas.

EVS-EN 1462:2002 Räästarenni- konksud. Nõuded ja katsetamine

Standard määrab kindlaks standarditele EN 607 ja EN 612 vastavate räästa- rennide konksudele esitatavad nõuded.

EVS-EN 1744-1:2002 Täitemater- jalide keemiliste omaduste katse- tamine. Osa 1: Keemiline analüüs

Standard määratleb täitematerjalide keemilise analüüsi meetodid. Standard määratleb põhimeetodid ja teatud juhtudel ka samaväärseid tulemusi andvad alternatiivmeetodid. Juhul kui kasutatakse teisi meetodeid, tuleb näidata, et need annavad siintoodud põhimeetodiga samaväärse tulemuse.

METROLOOGIA

VÕRDLUSMÕÕTMISED VIHTIDE KALIBREERIMISEL EESTIS

Viktor Vabson ja Toomas Kübarsepp

Sissejuhatus

Korrektset läbiviidud laborite vaheline võrdlusmõõtmine (LVV) annab kindla aluse osalejate mõõtetulemuste kvaliteedi hindamisele ja on üheks riigi mõõtesüsteemi kui terviku konkurentsivõime kaalukamaks näitajaks. Riigi mõõtetalonidel on LVV korraldamisel eriline roll [1]. Käesolevas kirjutises annavad autorid ülevaate nii rahvusvahelistest kui siseriiklikest vihtide kalibreerimise alastest võrdlusmõõtmistest, mis on toimunud Eesti laborite osavõtul. Üksikasjalikumalt käsitlevad nad LVV-d (tähisega VM1-2001), mille Eesti Akrediteerimiskeskuse tellimusel viis läbi riigi massietalonlabor (RME) 2001.a esimesel poolel. Võrdlusmõõtmiste hulgas on see üks esimesi, mis tugineb Eesti metroloogiakompetentsile ning järgib seejuures täpselt rahvusvaheliselt aktsepteeritud juhendeid ja praktikat.

Ülevaade varasematest võrdlustest

Esimene rahvusvaheline LVV, milles osales neli Eesti laborit, toimus 1993.a. Piloottlaboriks oli Soome metroloogiainstituut MIKES [2], kes sel moel toetas tegeliku olukorra hindamist ja mõõtesüsteemi arendamist Eestis. Sellal oli mõõtemääramatus Eestis täiesti uus mõiste. Seoses mõõteprotseduuri kui ka tulemuste esitamisega andis võrdlus metroloogilaboritele hea võimaluse tutvuda esmakordselt selle erakordselt olulise mõistega praktikas. Massi alal esitas neli laborit kokku 12 tulemust. Neist kolm ei vastanud kooskõla kriteeriumile: ekslike tulemuste osakaal oli seega 25 %, kusjuures kahel, so 50 % osalejatest, oli vähemalt üks viga. Situatsiooni uudsuse tõttu võib saadud tulemusi hinnata siiski positiivseks. Nimelt pidid osalejad rakendama uudet "mõõtemääramatuse" mõistet, etalonvahendid olid eranditult kontrollitud endise NSVL mõõtelaborites ja dokumenteeritud kvaliteedisüsteem ning mõõtevõime süstemaatiline hindamine puudus hoopiski.

Teise võimaluse riigi mõõtetaseme võrdlevaks hindamiseks andis ajavahemikul 1997-98.a PHARE programmi PRAQIII raames korraldatud võrdlusmõõtmised kolmeteistkümne Ida-Euroopa riigi osavõtul. Võrdlusmõõtmised viidi läbi kolmes valdkonnas, pilootlaboriks kutsuti juhtivad Lääne-Euroopa metroloogiainstituudid. Massi alal oli pilootlaboriks Suurbritannia metroloogiainstituut NPL, kahekümne labori hulgas osales Eesti poolt AS Metrosert Tallinnast ja Tartu Standardiseerimis ja Metroloogiakeskus (TSMK). Piloottlabor andis võrdlusobjektid ja tugiväärtused ning hindas osalejate esinemist. Lisaks lõpparuandele [3], mis tagas osalejate anonüümsuse, on Eesti laborite osavõttu käsitletud artiklites [4] [5]. LVV üldised tulemused on antud tabelis 1.

⁵ K. Carneiro, *Metrologia*, 2001, 38, 277-279.

Tabel 1. Üldised 1997-98.a massivõrdluse tulemused

	Laborite arv	Tulemuste arv	Eksinud laborite osakaal	Valetulemuste osakaal
Kõik osalenud	22	214	45 %	15 %
Eestist	2	20	50 %	15 %
Lääne-Euroopa akrediteeritud laborite tavaline tase			Alla 26 %	Alla 8 %

Teiste Ida-Euroopa laborite taustal võib Eesti osalejate tulemust pidada rahuldavaks. Lääne-Euroopa kalibreerimislaborite taset iseloomustav statistika on toodud artiklis [6]. Kokkuvõtvalt on see järgmine: kordagi ei eksi võrdluskatsel kriteeriumi vastu umbes 74 % laboritest ning ekslike tulemuste arv kõigi esitatute hulgas ei ületa 8 %. Seega Lääne-Euroopa akrediteeritud laborite tavalise tasemega võrreldes võiks soovida, et esitatud tulemuste kooskõla tugiväärtusega vastava mõõtemääramatuse hinnangu taustal oleks siiski parem.

Mõlemad eelkirjeldatud võrdlused olid Eesti mõõtesüsteemi kui terviku jaoks väga olulised, kuid ei hõlmanud kaugeltki kõiki vastavat mõõteteenust osutavaid laboreid. Ka oli kahe võrdluse vaheline aeg pikk. Seega need LVV-d ei täitnud täies ulatuses lünka siseriiklikul mõõteteenuste kvaliteedi hindamisel ja tagamisel.

Projekti VM1-2001 kirjeldus

Riigi massietalon viis 2001. a Eesti Akrediteerimiskeskuse (EAK) tellimusel läbi LVV kuue EAK poolt akrediteeritud metrooloogialabori osavõtul. Võrdlusetalonide komplekti kalibreerimise teel võrreldi laborite mõõtevõimet, meetodikaid, etalonseadmeid, laboratooriumi tingimusi ja kooskõla oluliste mõjurite mõõtmisel. Projekti sihiks oli võrrelda osavõtjate tulemusi, mis on saadud nende tavaliste mõõte- ja analüüsiprotseduuride rakendamisel ja iseloomustaks nende rutiinsete teenuste parimat mõõtevõimet. Eesmärgiks oli aidata laboreid teenuste ekvivalentsuse demonstreerimisel järgides seejuures tunnustatud rahvusvahelisi põhimõtteid.

Võrdlusetalonid

Võrdlusetalonid valiti RME töö- ja tugietalonide hulgast piirkonnas 100 mg kuni 100 g, võttes arvesse Eestis seni juba toimunud võrdlusi. Vihtide nimiväärtused olid 100 g, 100 g, 50 g, 20 g, 500 mg, 200 mg 200 mg ja 100 mg. Vihid on valmistatud mittemagnetilisest roostevaba terasest, üks spetsiaalne viht nimiväärtusega 100 g alumiiniumist. Kuju (välja arvatud alumiiniumvihil) vastas OIML soovitusel [7]. RME koostatud võrdlusmõõtmiste juhendis toodi ära andmed vihtide tiheduse ja ruumala kohta. Suurem osa võrdlusetalonidest on valmistatud Mettler-Toledo poolt kooskõlas OIML E₂ klassi nõuetega ja soetatud 1996.a. Esmakordselt on need kalibreeritud 1996.a Šveitsi akrediteeritud laboris SCS032 ja RME-s läbi viidud korduskalibreerimised 1998.a ja 2000.a kinnitasid etalonide head ajalast stabiilsust.

⁶ K. Brinkmann, *Neue Aufgaben Meistern*, QZ, 43, 1998.

⁷ International Recommendation OIML R 111, (1994), *Weights of classes E₁, E₂, F₁, F₂, M₁, M₂, M₃*.

Mõõteprotseduur

Ettevalmistuse käigus kalibreeriti võrdlusetalonid RMEs 2001.a aprillis. Osalevates laborites ringlesid need ajavahemikul 14.05.01 kuni 30.06.01. Uuesti kalibreeriti vihid RMEs vaheetapil 29.05.01 - 3.06.01 ja kohe pärast viimast osalejat. Vaheetapil mõned vihid puhastati, kuna pärast ringlemist kahes esimeses laboris muutus mitme vihi mass märgatavalt. Igal laboril oli üks nädal mõõtmisteks ja teine nädal lisaks tulemuste analüüsiks ja vormistamiseks. Grammipiirkonnas oli võimalik eelkõige üks-ühene võrdlus ühe või enama labori tugietaloniga. Milligrammpiirkonnas võis kasutada nii üks-ühest võrdlust kui ka kombinatsioonimeetodit.

Alumiiniumvihi (100 g) kalibreerimine tavalise roostevaba terasest 100 g vihi kõrval andis võimaluse võrrelda laborite kooskõla õhu tiheduse ja selle arvutamise aluseks olevate mõjurite määramisel.

Tulemused

Kõik laborid esitasid kalibreerimisandmed võrdlusvihtide leppelise massi väärtuste ja hinnatud laiendmääramatuste kohta. Tulemused on esitatud Tabelis 2, osalenud laborid on selles tähistatud suurte ladina tähtedega. Lisatud on enne võrdlusi, vaheetapil ja pärast laborites ringlemist saadud RME tugiväärtused. Kui mõne vihi jaoks mõne osaleja tulemus puudub, siis kõnealune labor vastavat vihti ei kalibreerinud. Kõiki esitatud tulemusi võrreldi RME tugiväärtustega ja hinnati vastavalt [4] kirjeldatud meetoodikale. Tabelis 3 on esitatud normeeritud hälbed kõigi hinnatavate tulemuste kohta. Kui normeeritud hälve oli suurem ühest on see esile tõstetud tumedama taustaga.

Kuue osaleja poolt esitati kokku 40 tulemust. Tavaliste OIML E₂ klassi nõuetele vastavate vihtide kalibreerimisel on tulemuste kooskõla väga hea: normeeritud hälve on siin vaid kolmel juhul suurem kui 0,5. Väikeste normeeritud hälvete korral tuleb silmas pidada siiski ka tulemuste tegelikke laiendmääramatusi.

Kõigist 40-st esitatud tulemusest saadi neli ebarahuldavat spetsiaalse 100 g Al vihi leppelise massi määramisel. Selle vihi kalibreerimise põhiraskuseks osutus sobiva mõõtemudeli formuleerimine, mis oli jõukohane vaid kahele osalenud laborile. RMEs analüüsiti Al-vihi jaoks esitatud lähteandmeid ühtse mudelit alusel uuesti ning ka selle vihi korral saadi kõigi laborite jaoks rahuldav kooskõla. See näitab asjakohase mõõtemudeli tähtsust kalibreerimistulemuste ja määramatuste arvutamisel. Võrreldes aga 100 g roostevaba terasest vihi tulemustega oli kooskõla pilootlaboriga märgatavalt halvem, mis on selgeks märgiks, et oluliste mõjurite (temperatuuri ja õhu tiheduse) mõõtmisele tuleb osalejatel pöörata suuremat tähelepanu.

Võrdluse käigus ilmnas märkimisväärne vihtide massi muutus, mis mitmel juhul ületas isegi tugiväärtuste laiendmääramatusi. Nimetatud muutused on tõenäoliselt seotud vihtide hoidmis- ja käsitsemistingimustega osalenud laborites. Seetõttu võrdlusetalonide küllaldase stabiilsuse tagamiseks mõned vihid puhastati vaheetapil ja kalibreeriti enne väljasaatmist RME-s uuesti. Teisel etapil olid vihtide muutused tunduvalt väiksemad.

Keskkonnatingimuste mõõtmine vajab eraldi tähelepanu seetõttu, et OIML soovitus [7] kohaselt ei ole vihtide usaldusväärne kalibreerimine ja tulemuste määramatuse hindamine võimalik ilma kooskõlata mõjurite mõõtmisel. Mitmel laboril puudub nõuetele vastav mudel õhu tiheduse määramiseks. Tarvilikud rahvusvahelised dokumendid ei ole ilmselt kättesaadavad ja puudu jääb kogemustest nende kasutamisel.

Mõjurite (eelkõige temperatuuri) määramatuse allikana seostati enamasti vaid kasutatud mõõtevahendite määramatusi. Kuid sageli võib palju olulisem olla panus, mis tuleneb mõõdetava suuruse definitsioonile mittevastavusest või ebarahuldavast protseduurist.

Õhu üleslükkeparandi arvutamisel on nõutav õhu temperatuur kaalukambris. Kui seda hinnatakse termomeetri näidu alusel, mis mõõtmise ajal asus näiteks väljaspool kaalukambrit, siis temperatuuri erinevus kaalukambris ja tegelikus mõõtekohas võib tunduvalt ületada termomeetri kalibreerimise määramatust.

Enamasti esitasid laborid korralikult läbitöötatud mõõtemääramatuse büdžetid. Samas oli mõõtemääramatuse hindamisel ka probleeme. Paarile laborile valmistas raskusi ka määramatuse põhiliste komponentide ja liitmääramatuse hindamine. Keerukam mõõtemudel, mis sisaldas õhu üleslükke parandit ja selle määramatuse hindamist, valmistas raskusi praktiliselt kõigile osalejatele.

Järeldused

Osalenud laborite poolt esitatud võrdlusetalonide kalibreerimise tulemused olid RME tugiväärtustega vastavalt [1] enamasti rahuldavas kooskõlas (36 tulemust 40st). Rahuldav kooskõla on eriti hinnatav nende tulemuste korral, millele omistatud laiendmääramatus on väike.

Spetsiaalse A1 vihi korral, kui oli nõutav õhu üleslükke parandi määramine ja arvessevõtmine, ei saavutanud rahuldavat kooskõla tugiväärtusega neli laborit kuuest, mis viitab tõsiasi, et vihtide kalibreerimise seisukohalt oluliste mõjurite mõõtmine vajab parandamist. Edasiarendamist nõuab kalibreerimismetoodika ja määramatuse hindamine, üle peaks vaatama nende mõõtevahendite rahvusvahelise seostatuse, mis on ette nähtud mõjurite mõõtmiseks. Kooskõla laborite vahel aitaks parandada ühtne kalibreerimisbaas, mille loomiseks tuleks soetada sobivaid etalonvahendeid. Tulemuste kooskõla demonstreerimiseks oleks tarvilik võrdlusmõõtmine ka selles valdkonnas.

Kokkuvõtteks

Viimase paarikümne aasta jooksul on võrdlusmõõtmiste roll mõõtetulemuste kvaliteedi kindlustamisel kiiresti kasvanud ja omandanud üha suurema kaalu mõõteastendiku kõigil tasanditel. Vihtide kalibreerimise alane LVV (VM1-2001) on esimesi, mis tugineb täielikult Eesti metroloogiakompetentsile ning vastab rahvusvaheliselt aktsepteeritud juhenditele ja praktikale. Nimetatud võrdlus lubas edukalt hinnata kõigi huvitatud laborite parimat mõõteväime, meetodikaid, etalonseadmeid, laboratooriumi tingimusi ja kooskõla oluliste mõjurite mõõtmisel. Võrdlustulemused demonstreerisid laborite teenuste ekvivalentsust üldtunnustatud rahvusvaheliste põhimõtete kohaselt.

Vajadus LVV regulaarseks korraldamiseks on ilmne ka väga paljudes teistes mõõtevaldkondades nagu termomeetrite kalibreerimine, mitmesugused elektrilised ja pikkusmõõtmised, ruumalade/tiheduste määramine, soojuse ja kulu mõõtmised ja keemilise analüüsi võtmealad.

Tabel 1. Võrdlusmõõtmise VM-2001 tulemused: kõigi osalenud laborite määratud väärtused koos määramatusega

ISO Peasekretäriks määrati Alan Bryden

Prantsuse Standardiinstituudi AFNOR peadirektor Alan Bryden määrati ISO peasekretäriks 14. - 15. novembril Genfis toimunud ISO Nõukogu koosolekul.

Ta asub ametisse 1. märtsist 2003.

Hr Bryden on sündinud 1945. a.

AFNORi direktor ja ISO ning CEN nõukogude liige alates oktoobrist 1999.

Samuti on ta Prantsuse Akrediteerimiskomitee COFRAC välissuhete komisjoni president.

Aastatel 1981 - 1999 töötas Alan Bryden Prantsuse rahvusliku katsebori peadirektorina. Sel perioodil loodi tema oselusel EUROLAB, mille esimeseks presidendiks ta ka oli.

Samuti oli ta Rahvusvahelise laborite akrediteerimise liidu ILAC juhataja.

Rahvuselt prantslane, on tal ka inglise kodakondsus, abielus, kolme lapse isa. Tegeleb regulaarselt spordiga - ratsutamise ja purjetamisega.

ISO kaebuste käsitlemise standard aitab kaitsta tarbijat

Ilmus ISO komiteekavand ISO/CD 10018 *Complaints handling*
Kavandi koostas ISO tehnilise komitee 176 Kvaliteedijuhtimine ja -tagamine alamkomitee 3 Toetavad tehnoloogiad (*Supporting technologies*)

Standardikavand kirjeldab tarbijate kaebuste efektiivse käsitlemise protsessi.

Kaebuste käsitlemine on kriitiline teema, mille korrektne käsitlemine toob kasu nii tarbijatele kui ettevõtetele ning tõstab klientide lojaalsust firmale.

Standard on firmadele abiks tarbijate kaebuste lahendamisel ning protsessi pideva parendamise juurutamisel.

Standard käsitleb järgmisi aspekte:

- Aitab kliendile orienteeritud keskkonna loomise teel saavutada kliendi rahulolu oma toote või teenuse pideva parendamise teel
- Juhtkonna kaasatus ja seotus ressursside juhtimise teel, s.h ka personali koolitus
- Kaebuste esitajate vajaduste ja ootuste tundmaõppimine
- Pakub kaebuste esitajatele ausat, avatud, efektiivset ja lihtsalt kasutatavat kaebuste esitamise protsessi
- Analüüsib ja hindab kaebusi toote või teenuse kvaliteedi tõstmise eesmärgil
- Auditeerib kaebuste käsitlemise protsessi efektiivsust

WTO SEKRETARIAADILT SAABUNUD TEATISED

Maailma Kaubandusorganisatsiooni WTO sekretariaadilt saabunud õigusaktide eelnõud, milles sisalduvad tehnilised normid võivad saada kaubanduse tehnilisteks tõketeks.

Eelnõude kohta on võimalik esitada kommentaare 2 nädalat enne tabelis toodud kuupäeva

Majandusministeeriumi Karel Kangro tel 625 6397, faks 625 6404, kkangro@mkm.ee

Eelnõude terviktekstid ja info EVS Teabekeskusest Signe Ruut tel 605 5062, faks 605 5063,

HARMONEERITUKS TUNNISTATUD

Tehnilise normi ja standardi seaduse muutmise seaduse (RT I 2002, 32, 186) kohaselt avaldab Eesti Standardikeskus oma veebilehel ja väljaandes teavet harmoneeritud standarditest.

Harmoneeritud (ühtlustatud) standardid on EL Uue lähenemisviisi direktiividega liituvad standardid. Harmoneeritud standarditeks loetakse need standardid, millele on viidatud EL ametlikus väljaandes *Official Journal*. Harmoneeritud standardite kasutamine on kõige lihtsam viis tõendada direktiivide oluliste nõuete täitmist. Lisainfo <http://www.newapproach.org/>

Igas EVS Teatajas numbris ja EVS kodulehel saab tutvuda Uue lähenemisviisi direktiivide all harmoneeritud standarditega. Ühtlasi avaldame ka, millised neist standarditest on üle võetud Eesti standarditeks.

Seekord on avaldatud **ehitustoodete, lõbusõidulaevade ja plahvatusohtliku keskkonna standardid** (avaldatud septembri ja oktoobri Euroopa Ühenduste Teataja C-seerias).

Kõik seekord viidatud standardid on üle võetud Eesti standarditeks, välja arvatud üks kavand, mis on aasta lõpuni arvamusküsitlusel (loetelus märgitud **).

NÕUKOGU DIREKTIIV 89/106/EMÜ liikmesriikide ehitustoodete käsitlevate seaduste, määruste ja haldusnormide ühtlustamisest 21. detsember 1988 (2002/C 212/06) 6.9.2002

Viidatud standardi tähis	Standardi nimetus	Vastavalt Direktiivi 89/106/EMÜ artiklile 4(2)(a) harmoneeritud Euroopa standardina rakendamise kuupäev	Standardi ülemineku- perioodi lõpukuupäev (°)

UUED STANDARDID JA KAVANDID ARVAMUSKÜSITLUSEKS

See EVS Teataja osa avaldab andmed uutest vastuvõetud Eesti standarditest ja avalikuks arvamusküsitluseks esitatud standardite kavanditest Rahvusvahelise standardite klassifikaatori (ICS) järgi.

Samas jaotises on toodud andmed nii eesti keeles avaldatud kui ka jõustumistega Eesti standarditeks ingliskeelsetena vastuvõetud rahvusvahelistest ja Euroopa standarditest. Kuna võimalusel on ingliskeelsetena vastuvõetud standardi nimetus ja käsitusala tõlgitud eesti keelde ja loetelust ei ole aru saada, millised standardid on tõlgitud eesti keelde, on eesti keeles avaldatud standardid toodud ka eraldi nimekirjana Teataja lõpus.

Eesmärgiga tagada standardite vastuvõtmine järgides konsensuse põhimõtteid, peab standardite vastuvõtmisele eelnema standardite kavandite avalik arvamusküsitlus, milleks ettenähtud perioodi jooksul on asjast huvitatuil võimalik tutvuda standardite kavanditega ning teha ettepanekuid.

EVS Teatajas on esitatud arvamusküsitlusele:

- 1) Euroopa ja rahvusvahelised standardid, mis on kavas vastu võtta Eesti standarditeks jõustumistega (kavandid kättesaadaval standardina inglise keeles EVS raamatukogus ja neid saab osta müügigrupist; EVS tehnilistel komiteedel on võimalik saada koopiaid oma käsitusala kokkulangetavatest standarditest EVS kontaktisiku kaudu);

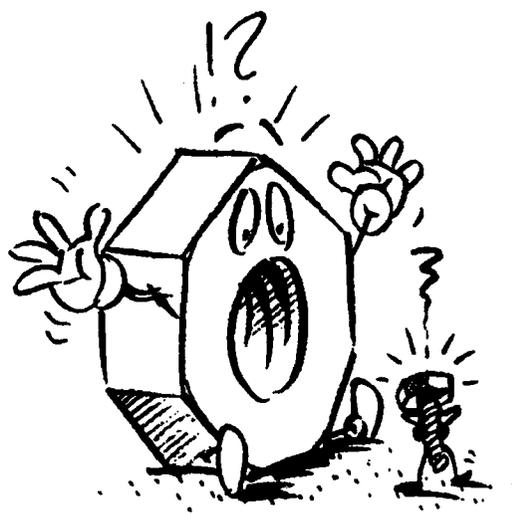

- 2) Eesti standardite kavandid, mis Eesti standardimisprogrammi järgi on jõudnud arvamusküsitluse etappi (kavandid on kättesaadavad eesti keeles standardiosakonnas, neid saab osta müüjigrupist);
- 3) Euroopa (prEN) standardite kavandid, mis on saadetud liikmetele arvamusküsitluseks (kavandid on kättesaadavad EVS raamatukogus, v.a Euroopa standarditeks ülevõetavate nende ISO tehniliste komiteede kavandid (prEN ISO), mille töös EVS ei osale, ja neid saab osta müüjigrupist. EVS tehnilistel komiteedel on võimalik saada koopiaid oma käsitusala kokkulangevatest kavanditest EVS kontaktisiku kaudu).

EVS Teatajas on kavandid identifitseeritud sellele standardite andmebaasis omistatud projekti numbriga järgi (nt prEVS 18958), kavandite saamiseks on soovitatav ära näidata ka kavandiga identse standardi tähis. Teavet Eesti standardimisprogrammist saab standardiosakonnast.

Kavandite arvamusküsitlusel on eriti oodatud teave, kui rahvusvahelist või Euroopa standardit ei peaks vastu võtma Eesti standardiks (vastuolu Eesti õigusaktidega, pole Eestis rakendatav jt põhjustel).

**Railway applications - Track -
Switches and crossings - Part 1:
Definitions**

This European Standard provides an accepted "terminology" for switch and crossing work. With the assistance of diagrams, the various components are given definitions, and these specific names are regarded as obligatory. The definitions cover the constituent parts and design geometry of switch and crossing work, and include the movement of switches. Additional terminology of a more specific nature will be defined in the relevant part of the series prEVS 54971

Tähtaeg: 2003-02-01

Identne prEN 13232-5:2002

**Railway applications - Track -
Switches and crossings - Part 5:
Switches**

The scope of this part is:- to establish a working definition for switches and their constituent parts and identify the main types ; - to list the minimum informative requirements for the manufacture of the switches and/or constituent parts ; - to formulate codes of practice for inspection and tolerances of both full and half sets of switches and their constituent parts ; - to establish the limits and scope of supply ; - to list the methods by which switches and their parts should be identified and traced ; - to list the different and varying ways by which switches can be described using the following parameters :- geometry of the switches ; - types of construction ; - performance requirements ; - design criteria ; - tolerances and inspection

Fire detection and fire alarm systems - Part 7: Smoke detectors - Point detectors using scattered light, transmitted light or ionization

This standard specifies requirements, test methods and performance criteria for point smoke detectors that operate using scattered light, transmitted light or ionization, for use in fire detection and fire alarm systems for buildings (see EN 54-1:1996). For other types of smoke detector, or smoke detectors working on different principles, this standard should only be used for guidance. Smoke detectors with special characteristics and developed for specific risks are not covered by this standard

Functional safety of electrical/electronic/programmable electronic safety-related systems - Part 1: General requirements

Sets out a generic approach for all safety lifecycle activities for systems comprised of electrical and/or electronic and/or programmable electronic components (electrical / electronic / programmable electronic systems (E/E/PESs)) that are used to perform safety functions. This unified approach has been adopted in order that a rational and consistent technical policy be developed for all electrically-based safety-related systems. Is intended to facilitate the development of application sector standards. Has the status of a basic safety publication in accordance with IEC Guide 104.

Environmental testing - Part 3-4: Supporting documentation and guidance Damp heat tests

Provides the necessary information to assist in preparing relevant specifications, such as standards for components or equipment, in order to select appropriate tests and test severities for specific products and, in some cases, specific types of application. The object of damp heat tests is to determine the ability of products to withstand the stresses occurring in a high relative humidity environment, with or without condensation, and with special regard to variations of electrical and mechanical characteristics. Damp heat tests may also be utilized to check the resistance of a

specimen to some forms of corrosion attack.

Environmental testing - Part 3-5: Supporting documentation and guidance Confirmation of the performance of temperature chambers

Rassemble les informations nécessaires aux rédacteurs qui, lors de l'établissement d'une spécification particulière telles que des normes pour les composants ou les matériels, choisissent les essais appropriés et leurs sévérités pour un produit particulier et, dans certain cas, pour des types d'application donnés. Le but de ces essais de chaleur humide est de déterminer l'aptitude des produits à supporter les contraintes d'un environnement à forte humidité relative, avec ou sans condensation, et plus particulièrement de déterminer les variations de leurs caractéristiques électriques et mécaniques. Les essais de chaleur humide peuvent aussi être appliqués en vue de vérifier la résistance d'un spécimen à certaines formes d'attaque par corrosion.

Environmental testing - Part 2-78: Tests - Test Cab: Damp heat, steady state

Provides a test method for determining the suitability of electrotechnical products, components or equipment for transportation, storage and use under conditions of high humidity. The test is primarily intended to permit the observation of the effect of high humidity at constant temperature without condensation on the specimen over a prescribed period. This test provides a number of preferred severities of high temperature, high humidity and test duration. The test can be applied to both heat-dissipating and non-heat dissipating specimens. The test is applicable to small equipment or components as well as large equipment having complex interconnections with test equipment external to the chamber, requiring a set-up time which prevents the use of preheating and the maintenance of specified conditions during the installation period.

Overhead electrical conductors

-Formed wire, concentric lay, stranded conductors

Specifies the electrical and mechanical characteristics of concentric lay, overhead conductors of wires formed or shaped before, during or after stranding, made of combinations of any of the following metal wires:

a) hard aluminium as per IEC 60889 designated A1; b) hard aluminium as per IEC 60889 designated A1F wire shaped before stranding; c) hard aluminium alloy as per IEC 60104 designated A2 or A3; d) hard aluminium alloy as per IEC 60104 designated A2F or A3F shaped before stranding; e) regular strength steel, designated S1A or S1B, where A and B are zinc coating classes, corresponding respectively to classes 1 and 2; f) high strength steel, designated S2A or S2B; g) extra high strength steel, designated S3A; h) aluminium clad steel, designated SA.

Rotating electrical machines - Equivalent loading and superposition techniques - Indirect testing to determine temperature rise

This standard applies to machines covered by IEC 34-1 when they cannot be loaded to a specific condition (rated or otherwise) for whatever reason. The methods are not suitable for machines of and below 1 kW. The object of this standard is to provide descriptions of various indirect load tests, the purpose of which is to determine the temperature rise of rotating electrical machines, including ac induction machines, ac synchronous machines and dc machines; both motors and generators are covered within the scope of the standard. The test methods in some cases provide in addition a means of measuring or estimating other parameters such as losses and vibration, but the methods are not designed specifically to provide such data. The proposed methods of test are considered equivalent, the choice of them relying only on the location, the testing apparatus and the kind of machine and the test result accuracy.

Three-phase dry-type distribution transformers 50 Hz, from 100 to 2500 kVA, with highest voltage for equipment not exceeding 36 kV - Part 1:

General requirements and requirements for transformers with highest voltage for equipment not exceeding 24 kV

This Harmonization Document covers transformers from 100 to 2 500 kVA intended for operation in three-phase distribution networks. It applies to three-phase dry-type transformers for continuous service 50 Hz, natural cooling, with two windings: - a primary (high-voltage) winding with a highest voltage for equipment of 3,6 kV to 24 kV. - a secondary (low-voltage) winding with a highest voltage for equipment not exceeding 1,1 kV.

Dimensions of electronic tubes and valves

Gives dimensions and tolerances for electronic tube and valve bases, holders and caps, together with the relevant gauges and gauging procedure, to ensure interchangeability. Also includes recommended practice for the preparation of drawings of electronic tubes and valves. This is a loose-leaf publication and supplements, containing new or revised sheets, are issued from time to time.

Components for low-voltage surge protective devices - Part 311: Specification for gas discharge tubes (GDT)

Gas discharge tubes (GDTs) are used for applications up to 1 000 V a.c. or 1 500 V d.c. in

communication or signalling circuits. They are defined as a gap, or series of gaps, in an enclosed discharge medium other than air.

They are designed to protect apparatus or personnel, or both, from high transient voltages. This standard does not specify requirements applicable to complete surge protective devices, nor does it specify total requirements for GDTs employed within electronic devices, where precise coordination between GDT performance and surge protective device withstand capability is highly critical.

Radio Equipment and Systems (RES) - Private wide area paging service - Part 1: Technical characteristics for private wide-area paging systems

This European

Telecommunication Standard (ETS) specifies the minimum performance characteristics and related methods of measurement for Private Wide-Area Paging (PWAP) systems operating on frequencies up to 470 MHz. The types of equipment covered by this ETS are as follows: - base station transmitters; - base station receivers; - base station transceivers; - pocket receivers. This ETS does not include performance characteristics that may be required by the user or requirements for interfacing equipment.

Radio Equipment and Systems (RES); ElectroMagnetic Compatibility (EMC) standard for VHF FM broadcasting transmitters

This European

Telecommunication Standard (ETS) covers the assessment of VHF FM sound transmitters and ancillary equipment in respect of ElectroMagnetic Compatibility (EMC). Technical specifications related to the antenna port are not included in this ETS. Such technical specifications are found in the related product standard for the effective use of the radio spectrum. This ETS specifies the applicable EMC tests, test methods, the limits and the minimum performance criteria for VHF FM sound broadcasting transmitters operating in the frequency range 87,5 MHz to 108 MHz.

Electromagnetic compatibility and Radio spectrum Matters (ERM); ElectroMagnetic Compatibility (EMC) standard for Narrow-Band Direct-Printing (NBDP) NAVTEX receivers operating in the maritime mobile service

The present document covers the assessment of radiocommunication and ancillary equipment in respect of Electromagnetic Compatibility (EMC). Technical specifications related to the antenna port are found in the related product standard ETS 300 065 [9] for the effective use of the radio spectrum. The present document specifies the applicable EMC tests, the test methods, the limits and the minimum performance criteria for Narrow-Band Direct-Printing (NBDP) NAVTEX receivers operating in the maritime mobile service and the associated ancillary equipment.

Specification of the radio data system (RDS) for VHF/FM sound broadcasting in the frequency range from 87,5 to 108,0 MHz.

The Radio Data System (RDS) is intended for application to VHF/FM sound broadcasts in the range 87.5 MHz to 108.0 MHz which may carry either stereophonic (pilot-tone system) or monophonic programmes. The main objectives of RDS are to enable improved functionality for FM receivers and to make them more user-friendly by using features such as Programme Identification, Programme Service name display and where applicable, automatic tuning for portable and car radios, in particular.

Methods of measurement for equipment used in terrestrial radio-relay systems; Part 1: Measurements common to sub-systems and simulated radio-relay systems

Gives standard conditions of measurement and methods of measuring the characteristics common to sub-systems of terrestrial line-of-sight radio-relay systems and to simulated radio-relay systems using frequency modulation. The tests described are limited to analogue transmission systems. Standardizes the conditions and methods of measurement to be used to ascertain the performance of terrestrial radio-relay systems and of the equipment used in such systems, and facilitates the comparison of the results of measurements made by different observers. Contains details of selected methods of making measurements to enable the assessment of the essential properties of a terrestrial radio-relay system and of the equipment used in such systems.

Electromagnetic compatibility (EMC) - Part 4-25: Testing and measurement techniques HEMP immunity test methods for equipment and systems
Describes the immunity test levels and related test methods for electrical and electronic equipment and systems exposed to high-altitude electromagnetic pulse (HEMP) environments.

Specifications for test equipment and instrumentation test set-up, test procedures, pass/fail criteria, and test documentation requirements are also defined by this standard. These tests are intended to demonstrate the immunity of electrical and electronic equipment when subjected to HEMP radiated and conducted electromagnetic disturbances. The objective of this part of IEC 61000 is to establish a common and reproducible basis for evaluating the performance of electrical and electronic equipment, when subjected to HEMP radiated environments and the associated conducted transients on power, antenna, and input/output (I/O) signal and control lines.

Standardization of interconnections between broadcasting transmitters or transmitter systems and supervisory equipment - Part 2: Interface standards for systems using data bus type interconnections

This part of IEC 60864 deals with the interface between a transmitter (or system of transmitters) and the supervisory equipment which is intended to remotely monitor and/or control the transmitter(s). It details the interconnections and facilities to be provided with a view to achieving compatibility between different types and makes of transmitters and supervisory equipment.

Applies to fibre optic switches.

These have the following features:

-they are passive without optoelectronic elements; -they have two or more states in which power may be routed between ports; -the ports are optical fibres or optical fibre connectors. This standard establishes uniform requirements for their optical, mechanical and environmental properties. It also establishes measurement and test procedures for quality assessment.

Railway applications - Track - Switches and crossings - Part 3: Requirements for wheel/rail interaction

This part of this European Standard specifies:- characterisation of wheel and track dimensions;- geometric design principles for wheel guidance;- design principles for wheel load transfer;- deciding whether movable crossings are needed. These are illustrated by their application to turnout components:- switches;- crossings;- check rails. But the principles apply equally to more complex layouts

Heat resistant steel castings

This European Standard is applicable to heat resistant steel castings, for general purposes (non pressure) above 600 °C. It is also applicable to heat resistant nickel and cobalt base alloys. This standard relates to castings manufactured from ferritic, austenitic-ferritic, austenitic steels, nickel and cobalt base alloys (characterised by their chemical composition [see Table 1] and mechanical properties [see Table 2]). In cases where castings are joined by welding by the founder, this European Standard applies. In cases where castings are welded : to wrought products (plates, tubes, forgings...); or by non founders. this European Standard does not apply.

Käesolev standard käsitleb viilkatuse kandetarindite külge püsivalt kinnitatud konkse, mis on ette nähtud katusekatjate redelite riputamiseks, töölavade toestamiseks, samuti inimese allakukkumist takistavate ohutusvahendite kinnitamiseks. Standard määratleb olulised mõtted, kasutatavad materjalid, nõuded kandevõime ja katsetuste kohta. Standard ei käsitle tarindeid, mis on ette nähtud ainult inimese allakukkumist takistavate ohutusvahendite kinnitamiseks.

Voltage bands for electrical installation of buildings

Applies to a.c. electrical installations of buildings supplied at a frequency not exceeding 60 Hz and at a nominal voltage up to and including 1 000 V. Defines two voltage bands: Band I covers the installations where protection against shock is provided under certain conditions by the value of voltage and the installations where the voltage is limited for operational reasons (e.g. telecommunications, signalling, bell, control and alarm installation). Band II contains the voltage for supplies to household, commercial and industrial installations. This band contains all the voltage of public distribution systems in the various countries. A basic safety publication in accordance with IEC Guide 104. Note -The voltage bands defined are intended mainly for use in connection with installation rules (see IEC 60364), but may also be used when preparing requirements for electrical equipment.

Liigitus

This European Standard establishes a classification system for resilient floor coverings. The classification is based on practical requirements for areas of use and intensity of use and is linked to the requirements specified in the European Standard for each type of resilient floor covering. This standard is also intended to give guidance to manufacturers, specifiers and consumers to enable them to choose the appropriate class of resilient floor covering for any given area of use or specific room. NOTE - The wear and appearance of resilient floor coverings are influenced by standards of installation and maintenance, the condition of the subfloor and the kind of use (type of footwear, high concentrations of localized traffic, etc.). These factors should be taken into account when using this classification system

cracking**

This European draft standard specifies a test method for screening the resistance of polymeric geosynthetic barriers to stress cracking. The test is applicable to polypropylene and polyethylene based products and to all other polymeric geosynthetic barriers which have a partially crystalline structure

prEVS 54958

Tähtaeg: 2003-02-01

Identne prEN 14581:2002

**Natural stone test methods -
Determination of thermal
expansion coefficient**

This European standard specifies methods to determine the linear thermal expansion coefficient of natural stone, either based on mechanical length-change measurements or using bonded electric strain gauges

prEVS 54961

Tähtaeg: 2003-02-01

Identne prEN 14579:2002

**Natural stone test methods -
Determination of sound speed
propagation**

The European Standard specifies a method for the determination of the velocity of propagation of pulses of ultrasonic longitudinal waves in natural stone

prEVS 54966

Tähtaeg: 2003-02-01

Identne prEN 14580:2002

**Natural stone test methods -
Determination of static elastic
modulus**

The standard specifies a method to determine the static elastic modulus of natural stone in uniaxial compression

prEVS 55028

Tähtaeg: 2003-02-01

Identne prEN 14585:2002

**Pressurised corrugated metal
hose assemblies**

This European standard specifies the requirements for material, design, manufacturing, testing and documentation for pressurised corrugated metal hose assemblies intended for use with pressure equipment and having a PS greater than 0,5 bar

prEVS 55051

Tähtaeg: 2003-02-01

Identne prEN 14586:2002

**Specification for landing valves
for dry riser and other dry main
systems for fire fighting in
buildings**

This Standard specifies requirements for Landing Valves for Dry Main systems in buildings. The valves generally comply with the Standards produced by CEN/TC 69 for General Purpose, Copper, Alloy, Gate, Globe and ball valves, suitable for installation as landing valves on Dry Risers/Mains. Additional requirements are specified for their use as fire hydrants in buildings
