EESTI UUDISED

10. veebruaril 2003 registreeriti EVS/TK 22 "Informatsioon ja dokumentatsioon". Komitee esimees on Veiko Berendsen (Riigikantselei) ja aseesimees Anu Nuut (Eesti Rahvusraamatukogu). Komitee asub Eesti Rahvusraamatukogus ja sekretär - kontaktisik on Endla Sandberg.

20. veebruaril Standardikeskuse korraldusel toimunud seminaril "EL Ühisturu võimalused - lõikusaeg" tutvustati standardite kasutamise vajalikkust ning tööstust toetavat kvaliteedi infrastruktuuri. Vt rohkem lk 5.

21. veebruaril toimus Majandus- ja kommunikatsiooni-ministeeriumi juures tegutseva Standardimiskomisjoni koosolek, kus kinnitati 2003. a teise poolaasta standardimiskava. Standardimiskava on dokument, kuhu koondatakse nende standardite loend, mille koostamist asjaomased ministeeriumid peavad oluliseks. Vabariigi Valitsuse 11. veebruari 2003. a korraldusega nr 128-k muudeti standardimiskomisjoni koosseisu. Vt lk 2.

21. veebruaril osales Standardikeskuse teabeosakonna spetsialist Signe Ruut Brüsselis Euroopa Komisjoni poolt kandidaatriikidele korraldatud WTO SPS (Sanitaar ja fitosanitaarmeetmed) teabekeskuste nõupidamisel. Kõne all olid probleemid SPS alastest teavitamises enne liitumist ja muutused ning erinevused peale liitumist Euroopa Liiduga.

25. veebruaril toimus Soome Keskkonnaministeeriumis programmi EL Phare alamprogrammist "Twinning Light" esimene töökoosolek, milles vötsid osa Majandus- ja kommunikatsiooniministeeriumi ehitus- ja elamuosakonna peaspetsialist Janne Kurg ning EVS standardiosakonna peaspetsialist Kaido Rajur. Vt lk 7.

Vabariigi Valitsuse 4. veebruari 2003. a määrusega nr 43 kehtestati **Isikukaitsevahendi ohutusnõuded ning nõuetele vastuvuse hindamise ja tõendamise kord** RTI, 13.02.2003, 14, 80

§ 3. Ohutuse tagamine

(2) Eeldatakse, et isikukaitsevahend vastab ohutusnõuetele, kui see on valmistasud vastavuses üht või enamat ajakohast ohutusnõuet käsitleva «Tehnilise normi ja standardi seaduse» (RT I 1999, 29, 398; 2000, 29, 169; 78, 495; 2002, 32, 186; 99, 580) § 6 lõike 2 mõistes harmoneeritud standardiga (edaspidi *harmoneeritud standard*).

(3) Kui harmoneeritud standardeid ei ole rakendatud või neid on rakendatud osaliselt või kui sellised standardid puuduvad, peab tootja või tema volitatud esindaja turujärelevalveasutuse nõudmisel tõendama, et isikukaitsevahendi ohutus on nõutud tasemel.

Kallid lugejad!

Täna saate lugeda kokkuvõtet EVS Teataja kohta tehtud küsitleuse tulemustest. Täname veelkord kõiki vastanuid.

Lubatud auhinna "Eesti standardite loetelu 2003" võitis Heino Nõgu, AS Nuia PMT.

Viimastel aastatel on hakatud kõikide tasandite standardiorganisaatsioonides erilist tähelepanu pöörama standardimise nähtavaks tegemisele. Üheks kanaliks selles on standardorganisaatsioonide ametlikud väljaanded. Teised kanalid on standardimist ja standardeid propageerivad üritused ja muud väljaanded. Üks selline üritus - äriseminar "EL Ühisturu võimalused" toimus EVS korraldusel 20. veebruaril Radisson SAS hotellis.

Ettevõtete suhteliselt vähene huvi on töenduseks, et nad ei ole endale veel piisavalt teadvustanud standardite vajadust. Siin seisab EVS ees ülesanne veelgi enam selgitada standardite vajalikkust ja standardimisest saadavat kasu.

Ühe positiivse näitena sellest andis EVS välja mini CD Standardikeskuse, standardimise ja turunõuete tutvustamiseks.

Standardimise nähtavakstege mist pidas oluliseks ka CENELEC oma foorumil Brüsselis, milles vöttis osa ja annab sellest ülevaate EVS standardiosakonna juhataja Raul Juhanson.

Anne Laimets
anne@evs.ee.

§ 37. Vastavusdeklaratsioon

(1) Vastavusdeklaratsioon on «Toote nõuetele vastavuse töendamise seaduse» §-s 5 sätestatud dokument, milles tootja või tema volitatud esindaja töendab ja kinnitab oma allkirjaga, et turule lastav isikukaitsevahend vastab sellele kehtestatud nõuetele.

(2) II gruvi isikukaitsevahendi vastavusdeklaratsioonis peavad lisaks eeltoodule olema tüübihindamise teostanud heakskiidetud asutuse andmed, tüübihindamise kuupäev ja tüübihindamissertifikaadi number.

(3) III gruvi isikukaitsevahendi vastavusdeklaratsioonis peavad lisaks eeltoodule olema andmed tootja kvaliteedisüsteemi nõuetele vastavaks tunnistanud heakskiidetud asutuse kohta.

§ 38. Tüübile vastavuse hindamine

(1) Tüübile vastavuse hindamine (edaspidi *tüübihindamine*) on menetlus, mille puhul heakskiidetud asutus teeb kindlaks ja töendab, et hinnatav isikukaitsevahendi tüüp vastab käesoleva määrasega kehtestatud asjakohastele nõuetele. Heakskiidetud asutus käesoleva määrase tähenduses on tunnustatud asutus, kellele on antud õigus teostada käesoleva määrase kohaseid isikukaitsevahendi nõuetele vastavuse hindamiseks ja töendamiseks vajalikke vastavushindamise protseduure.

(3) Heakskiidetud asutus kontrollib tüübihindamisel, kas tootja tehniline toimik on kooskõlas märgitud harmoneeritud standarditega.

(4) Kui tootja ei ole rakendanud harmoneeritud standardeid või on neid rakendanud osaliselt või kui need puuduvad, teeb heakskiidetud asutus kindlaks, kas tootja kasutatud tehnospetsifikaat vastab ohutusnõuetele ning seejärel kontrollib, kas tootja tehniline toimik on kooskõlas tehnospetsifikaadiga.

(5) Heakskiidetud asutus kontrollib, kas näidiseksemplar on valmistatud kooskõlas tootja tehnilise toimikuga ning on otstarbekohasel kasutamisel ohutu.

(6) Heakskiidetud asutus teeb vajalike kontrollimiste ja katsete abil kindlaks, kas näidiseksemplar vastab harmoneeritud standarditele.

(7) Kui tootja ei ole rakendanud harmoneeritud standardeid või on neid rakendanud osaliselt või kui sellised standardid puuduvad, teeb heakskiidetud asutus kindlaks, kas tootja kasutatud tehnospetsifikaadid vastavad ohutusnõuetele, ning teeb vajalike kontrollimiste ja katsete abil kindlaks, kas näidiseksemplar vastab neile tehnospetsifikaatidele.

(8) Kui näidiseksemplar vastab käesoleva määrasega kehtestatud asjakohastele ohutusnõuetele, koostab heakskiidetud asutus tüübihindamissertifikaadi ning edastab selle taotluse esitajale.

(9) Tüübihindamissertifikaadis esitatakse kontrollimiste tulemused, näidates, kas isikukaitsevahend vastab harmoneeritud standardile või ohutusnõuetele, ning esitatakse isikukaitsevahendi tüubi turule laskmise erinõuded, tüubi identifitseerimiseks vajalikud kirjeldused ja joonised.

§ 40. Toote kontrollil põhinev kvaliteedisüsteem

(1) Tootja on kohustatud rakendama köiki vajalikke meetmeid, et tagada tootmisprotsessi, sealhulgas isikukaitsevahendite lõppkontrolli ja katsetuste ühtluse ning isikukaitsevahendite vastavuse tüübihindamissertifikaadile ja asjakohastele ohutusnõuetele.

(2) Tootja esitab valitud heakskiidetud asutusele taotluse oma toote kontrollil põhineva kvaliteedisüsteemi hindamiseks.

(3) Heakskiidetud asutus teeb hindamiseks vajalikud kontrollid pisteliselt, tavaliselt vähemalt üks kord aastas.

(4) Heakskiidetud asutus kontrollib küllaldast hulka isikukaitsevahendeid, tehes harmoneeritud standardites nimetatud või ohutusnõuetele vastavuse kinnitamiseks vajalikud katsed. Katsete kohta antakse tootjale protokoll.

§ 41. Tootmisprotsessi kontrollil põhinev kvaliteedisüsteem

(4) Heakskiidetud asutus hindab kvaliteedisüsteemi, et teha kindlaks, kas see vastab lõigetes 2 ja 3 sätestatud nõuetele. Kui kvaliteedisüsteem vastab sellekohastele harmoneeritud standarditele, eeldab heakskiidetud asutus, et kvaliteedisüsteem vastab nõuetele.

§ 43. Turule laskmine

Isikukaitsevahendi võib turule lasta, kui on täidetud järgmised nõuded:

- 1) isikukaitsevahend kaitseb nõuetekohase hooldamise ja otstarbekohase kasutamise korral kasutaja tervist ning tagab tema ohutuse, ohustamata seejuures teisi isikuid, koduloomi ja vara;
- 2) isikukaitsevahendi nõuetele vastavus on käesolevas määruses sätestatud korras töendatud;
- 3) isikukaitsevahendi tootja või tema volitatud esindaja esitab turujärelevalveasutusele tema nõudmisel isikukaitsevahendi vastavusdeklaratsiooni;
- 4) isikukaitsevahendile on paigaldatud vastavusmärk;
- 5) isikukaitsevahend on varustatud muu nõutava märgistuse ja teabega.

5. peatükk

RAKENDUSSÄTTED

§ 44. Üleminekuperiood

Turule lastav Eestis toodetud isikukaitsevahend peab kandma vastavusmärki pärast Eesti ühinemist Euroopa Liiduga

Vabariigi Valitsuse 11. veebruari 2003. a korraldusega nr 128-k muudetakse

Vabariigi Valitsuse 22. mai 2001. a korraldust nr 326-k «Standardimiskomisjoni moodustamine» RTL, 17.02.2003, 23, 343

1. Teha punktis 1 järgmised muudatused:

1) arvata standardimiskomisjoni koosseisust välja Alice Vood, Tuuli Tang ja Leida Roos;

2) nimetada standardimiskomisjoni liikmeteks:

Merike Kompus – Majandus- ja Kommunikatsiooniministeeriumi tööstusosakonna juhataja, komisjoni esimees

Meelis Maiste - Siseministeeriumi õigusosakonna nõunik

Leelo Männik - Sotsiaalministeeriumi rahvatervise osakonna peaspetsialist;

EVS TEATAJA KÜSITLUSE TULEMUSED

Koos EVS Teataja selle aasta esimese numbriga saite kätte meie küsitluslehe, kus palusime teie arvamusi ja ettepanekuid Standardikeskuse ametliku väljaande kohta.

Täidetult saime küsitluslehti tagasi 30. Üldistuste tegemiseks on seda küll vähe, aga kuna vastused olid ainult paari erandiga väga ühesugused, saame mõningaid järelusi siiski teha.

Kõige rohkem vastanutest - 43 % tellib EVS Teatajat 2-5 aastat, 5-10 aastat tellijaid oli 37 %, 12 % tellijaid saab EVS Teatajat 1-2 aastat. (Nüüd ja edaspidi ei tule kokku 100 %, sest kõik ei vastanud kõikidele küsimustele).

Paberkandjal loeb ajakirja vastanutest 76 % ja elektrooniliselt 16 %. Keskmiselt loeb asutusse tellitud Teatajat 5 inimest.

Võib öelda, et jälgitakse peaaegu kõiki rubriike, kõige rohkem, 93 % Eesti uudiseid, uute standardite loetelu 90 %, kuu standardite tutvustust 83 %. Järgnevad artiklid, ISO JA CEN uudised, harmoneeritud standardid, uued trükised, kvaliteet.

Eriti ei olda veel harjunud jälgima arvamusküsitlust - seda teeb vaid 57 %, kuigi see peaks olema oluline eelinfo peagi ilmuvate standardite kohta.

Oma lugejad on nii akrediteerimisel 66 %, kui metroloogial 57 %. Üks ettepanek oli just akrediteerimise ja metroloogia osakaalu suurteendamise kohta. Oleme valmis avaldama ka edaspidi sellekohaseid artikleid, mida meile pakutakse.

Kui kõigis rubrikkides oli selle jälgijaid rohkem kui mittejälgijaid, siis ainukeseks erandiks sellest oli WTO teated, kus suhe oli ühega mittejälgijate kasuks. See on muidugi seletatav WTO teadete suure spetsiifilisusega.

EVS Teataja ilmumissagedus rahuldab peaaegu kõiki. Ainult paar ettepanekut oli võimaluse kohta kaaluda vajadusel harvemini välja andmist.

Meeldivaks üllatuseks oli, et valdavas enamuses ollakse rahul nii EVS Teataja sisu (93 %), kujunduse (86 %) kui ka trüki ning köite kvaliteediga (samuti 86 %). Vastanutest vaid kaks ei olnud rahul sisu ja üks kujundusega.

Liiga kalliks ja liiga odavaks ei pidanud EVS Teatajat keegi, vastanutest 90 % pidas hinda parajaks. Seda tulemust võib küll pidada harukordseks, mitte keegi ei kurtnud, et väljaanne oleks liiga kallis.

Uute standardite ja arvamusküsitluse rubriigis standardite käsitlusalaade avaldamist pidas vajalikuks 60 % ja mittevajalikuks 16 %. Sageli ei selgu standardi pealkirjast, millega on tegemist. Siin ongi abiks käsitlusala.

Ühe küsimusena tahtsime teada, kas ollakse valmis tellima kvaliteetsemat, kuid seetõttu ka kallimat EVS Teatajat.

Eitavalt vastas sellele 50 %, kallimat ajakirja oleks valmis tellima 27 %.

Saime hulgaliselt ettepanekuid ja kommentaare, mida püüame võimaluse korral edaspidi arvestada.

Ettepanekuid tehti ka EVS töö teiste aspektide kohta, mis on edastatud EVS vastavatele osakondadele.

Auhinnaks olnud Eesti standardite loetelu võitis Heino Nõgu, AS Nuia PMT.

Õnnitleme võitjat!

Tänname veelkord kõiki vastanuid!

Anne Laimets
EVS Teataja toimetaja

ETTEVÕTJA EI OLE VEEL TEADVUSTANUD STANDARDITE VAJADUST

Pildil: Sven Kasemaa, Mati Peekmaa, Siret Keegel, Raul Juhanson ja Merike Kompus panneldiskussioonil

20. veebruaril korraldas Standardikeskus koostöös Rootsiga Standardiorganisatsiooniga SIS seminarit "EL ühisturu võimalused - lõikusaeg". Radisson SAS hotelli suurepärase vaatega Tallinna saalis avas seminarit EVS juhatuse esimees Kaubandus-Tööstuskoja tegevdirektor Siim Raie.

Osavõtjad said seminaril ülevaate kvaliteedi infrastruktuurist tööstuse toetajana (Majandus- ja kommunikatsiooniministeeriumi tööstusosakonna juhataja Merike Kompus), standardite kasutamise vajalikkusest (EVS tegevdirektor Sven Kasemaa) ja standardimises osalemise eelistest (EVS standardiosakonna juhataja Raul Juhanson).

Standardite kasutamise kogemusi jagasid Eesti edukate ettevõtete AS Elcoteq Tallinn kvaliteedijuht Siret Keegel ja AS Standard ökonoomikadirektor Mati Peekmaa.

Seminaril osales 50 ettevõtete ja organisatsioonide ning euroinfokeskuste esindajat.

Osavõtjaid oleks võinud seminaril olla rohkem, saatsime välja üle 3000 kutse. Ettevõtete vähene huvi on tõenduseks, et nad ei ole endale veel piisavalt teadvustanud standardite vajadust.

Saamaks võimalikult suurt kasu Euroopa Liidu liikmestaatusest peab Eesti tööstus :

- kohanema uute ootuste, nõuete ja standarditega suutmaks koduturul konkureerida Euroopa turu lainemisest tingitud Eesti turule sissetungijatega
- kasutama standardite abil ise lainenud Euroopa turul õigeaegselt uusi ekspordivõimalusi enne, kui seda teevad väliskonkureandid
- kasutama EVS-i suletud uste avajana aktiivsel osalemisel standardimisprotsessis EVS toetab ettevõtjaid selles igati.

Mitmed ettevõtted on juba kogenud standardite kasutajad, paljudele aga oli see esimeseks tutvuseks standardite keerulise maailmaga.

Seminari lõpus toimunud paneeldiskussioonil esitatud küsimused viitasid kitsaskohtadele vastavushindamise praeguses seisus Eestis. Üleminekuaja töttu ei ole veel võimalik saada Eestis oma toodetele CE märgistust, ilma CE märgistuseta aga pole võimalik minna nn Uue lähenemisviisi direktiivide alla kuuluvate toodetega Euroopa turule.

Tähelepanu pöörati ka riiklike etalonide vähesusele ja ebapiisavale kalibreerimisvõimle, mis kahandab Eesti tööstuse konkurentsivõimet Euroopas.

Probleemina tõstati terminoloogia ühtlustamise küsimus.

Sõnavõttudest selgus, et standardite kasutajad vajaksid lisakoolitust, et võimalikult kiiresti ja tulemuslikult teha internetis vajalikke standardite otsinguid. Selleks plaanime sel teemal koolitust septembris seminaril "Standardiinfo elektroonilised allikad".

Seminari esitles Standardikeskus oma vastvalminud mini CD-d, mis tutvustab EVS tegevust, publikatsioone, standardimist ning turunõudeid. Vt ka lk 12.

Välja oli pandud ka näitus standarditest ning Standardikeskuse väljaannetest.

Osalejad jäid seminariga rahule, keskmne hinne oli viiepalli süsteemis neli.

Pildil: vaheajal koos Rootsiga kolleegidega

Seminari võib kokku võtta AS Tarkoni esindaja Peeter Salk'i sõnadega "Tervitan standardimise propageerimist, siin tuleb selgitustööd tunduvalt laiendada. Kõrgem standardimise tase tõstab Eesti ettevõtete autoriteeti Euroopa turul".

Anne Laimets
EVS peaspetsialist

CENELEC FOORUMIL

CENELEC
Euroopa Elektrotehnika Komitee (CENELEC) korraldas liikmete ja kandidaati liikmete informeerimiseks foorumi.

Brüsselis CEN/CENELEC uuendatud koosolekukeskes toimus 29. jaanuaril foorum tutvustamaks liikmetele ülevaadet CENELEC-i arengutest ning pakutavatest teenustest.

Elektrala standardimine on ka Eestis kasvava tähtsusega. Eelmisel aastal asutati kaks esimest rahvuslikku tehnilikomiteed - Madalpinge ja Kõrgepinge - ning käesoleval aastal on plaan kokku kutsuda Valgustuse ja Terminoloogia standardimise komiteed.

Seega peab EVS antud valdkonna arengutega kursis olema, et huvipoolele Eestis pakkuda võimalikult head teenust.

Ühepäeval foorumil anti hommikupoolikul ülevaade CENELEC-i üldistest arengusuundadest ja eesmärkidest. Põhilised strateegilised eesmärgid on seotud Euroopa ühisturu toetamisega standardistegevuse kaudu, mille eesmärgiks on elektrotehnika toodete, süsteemide ja teenuste kaubandustöökete kaotamine. CENELEC peab endiselt oluliseks koostööd

Rahvusvahelise Elektrotehnika Komisjoniga (IEC). Ligi 75 % CENELEC-i standarditest baseerub IEC tööl.

CENELEC-i peasekretär **M. C. Parlevliet** tutvustas *CENELEC Masterplan*-strategiadokumendi punkte ning nende täitmist.

Üheks olulisimaks eesmärgiks CENELEC-i jaoks on valdkonna standardimise ja organisatsiooni tuntuse suurendamine – presenteeriti uut CENELEC tegevust ja Euroopa standardimissüsteemi tutvustavat trükitist “*Primer on Standards. Uncovering the Mysteries of Standardization in Europe*” Vt ka lk 12.

Strategiadokumendiga saab lähemalt tutvuda <http://www.cenelec.org/Documents/Masterplan/CLCMplan.pdf>.

Pr Rodande, kes on Euroopa standardiorganisatsioonide sisereeglite töörühma liige tutvustas CENELEC-i uusi dokumente. Ta rõhutas, et uued dokumendid on loodud hõlbustamaks ja kiirendamaks standardimist Euroopas. Teiseks oluliseks eesmärgiks dokumentide loomisel oli ka formaatide ühtlustamine rahvusvaheliste standardiorganisatsioonide dokumentidega, et tagada veelgi efektiivsem koostöö Euroopa ja rahvusvahelisel tasandil.

standardijatele võimalikult mugavat töökeskkonda.

Ettekande uutest IT võimalustest ning nende kasutamisest tegi esimesena Interneti võimalusi kasutama asunud komitee TC 215

"Electrotechnical aspects of telecommunication equipment" sekretär Thomas H. Wegmann. Tehniliste komiteede vajaduste rahuldamiseks loodud CLCTECH tagab tehniliste komiteede liikmetele internetipõhise ligipääsu kõigile komitee töödokumentidele ja standardikavanditele. CLCTECH on keskne dokumendi haldussüsteem, mis võimaldab töödokumente vaadata, alla laadida ning uusi või kommenteeritud dokumente teistele asjasthuvitatutele kättesaadavaks teha. Läbi CLCTECH on ka kõigi EVS elektrala komiteede sekretäridele avatud juurdepääs

peegeldatavate CENELEC-i komiteede töödokumentidele ja standardikavanditele. CENELEC-i esindaja E. Cornez. täiendas hr Wegmanni ettekannet ülevaatega uutest võimalustest, mille tekitamiseks CENELEC hetkel ettevalmistusi teeb. Plaanis on uuendada kodulehekülge, muutes selle struktuuri sarnaseks IEC koduleheküljega. Eesmärgiks on elektrala standardijate ja standardikasutajate elu lihtsustamine. Lisaks võimaldab uus lehekülg sooritada standardi ost elektronilise maksega. Uue kodulehekülje valmimine on planeeritud käesoleva aasta lõpuks.

Raul Juhanson

EVS standardiosakonna juhataja

TWINNING LIGHT STARTIS

EVS Teataja eelmises numbris (veebruar 2003) Eurokoodeksite sarja standardite kohta kirjutatud artiklis oli juttu ka nende standardite rahvuslike lisade koostamiseks pakutavast EL Phare alamprogrammist "Twinning Light". 25. jaanuaril toimus Soome Keskkonna-ministeeriumis selle programmi esimene töökoosolek, milles Eesti poolt võtsid osa Majandus- ja kommunikatsiooniministeeriumi ehitus- ja elamuosakonna peaspetsialist Janne Kurg ning EVS standardiosakonna peaspetsialist Kaido Rajur. Soome poolt osalesid projekti juht, Soome Keskkonnaministeeriumi elamu- ja ehitusosakonna juhataja Matti J. Virtanen ning eksperdid Tauno Hietanen (betoonkonstruktsioonid), Jouko Kouhi (teraskonstruktsioonid) ning Tor-Ulf Weck (ehituskonstruktsioonide projekteerimise alused, koormused, puitkonstruktsioonid ja kivikonstruktsioonid). Koosolekul arutati programmi teostamise üksikasju, nagu tegevused, ajagraafik, programmis osalevad eksperdid, terminoloogia, koolitus jms. Koosolekust osavõtjad leppsid kokku, et programm "Twinning Light" käsitleb peamiselt

standardeid Eurokoodeks 1 (ehituskonstruktsioonide koormused), Eurokoodeks 2 (betoonkonstruktsioonid), Eurokoodeks 3 (teraskonstruktsioonid), Eurokoodeks 5 (puitkonstruktsioonid) ja Eurokoodeks 6 (kivikonstruktsioonid) ning nende rahvuslikke lisasid. Nimetatud valdkondades viiakse läbi Eesti ja Soome ekspertide ühiskoosolekuid, samuti korraldatakse Eestis rida seminare, milles saavad osa võtta kõik asjast huvitatud spetsialistid.

Programm "Twinning Light" kestab 8 kuud. Eurokoodeksite seminarid algavad mais-juunis ning jätkuvad septembris-oktoobris.

Seminariel käsitletakse mitte ainult uute Eurokoodeksite teoreetilist külge ning nende erinevust vastavate Euroopa eelstandarditega (ENV 1991, ENV 1992, ENV 1993, ENV 1995 ja ENV 1996) võrreldes, aga ka nende praktilist kasutamist (koos arvutusnäidetega). Eesti ja Soome koostöö ehituskonstruktsioonide projekteerimise valdkonnas jätkub mingis vormis kindlasti ka tulevikus.

Kaido Rajur

EVS standardiosakonna peaspetsialist

VEEBRUARIKUU STANDARDID

EVS 656:2003 Teravili ja teraviljasaadused. Niiskusesisalduse määramine

Standard käsitleb teravilja [nisu, durumnisu, riis (kestaga, kestata ja osaliselt kestata), kaer, hirss, rukis, oder, tritikale, sorgo] ja teraviljasaadustest (jahvatatud terad, manna, jahu) niiskusesisalduse määramise meetodit. Standard ei kehti maisile.

EVS 678:2003 Teravili. Mahukaalu määramine

Standard käsitleb teravilja (nisu, kaer, oder ja rukis) mahukaalu määramismeeetodit kasutades 1 l mõõtekonteinerit.

EVS 760:2003 Teravili ja teraviljasaadused. Toorproteiinisisalduse määramine

Standard käsitleb teravilja ja teraviljasaadustest toorproteiinisisalduse määramise meetodit ning kehtib inimtoiduks ja söödaks kasutatavalte teraviljale.

EVS 780:2003 Teravili, kaunvili ja jahvatatud tooted. Proovivõtt staatilistest kogustest

Standard käsitleb puistes või kottides teravilja, kaunvilja ja teraviljast ning kaunviljast jahvatatud toodete, välja arvatud granuleeritud tooted, (edaspidi "vili") kvaliteedi määramiseks proovivõtu üldtingimus.

Standard on rakendatav käsitsi või mehaanilisel proovivõtul staatilistest viljalaadungitest sügavusega kuni 3 m.

Staatiliste laadungite puhul sügavusega üle 3 m kuni 12 m tuleb kasutada mehaanilisi proovivõtumeetodeid. Kui puistelaadungi sügavus on üle 12 m, tuleb proove võtta viljavooost vastavalt standardile EVS 798.

Standard ei kehti seemneviljale ning ei rakendu kindlate spetsiifiliste nõuetega proovivõtu puhul (näiteks mikrobioloogilised, mükotoksiinide või pestitsiidide sisalduse analüüs).

Sellisel juhul on soovitatav lepingupartneritel proovivõtu osas omavahel kokku leppida.

EVS 798:2003 Teravili ja jahvatatud teraviljasaadused. Automaatproovivõtt

Standard käsitleb inimtoiduks mõeldud teravilja ja jahvatatud teraviljasaadustest (edaspidi "vili") kvaliteedi määramiseks automaatproovivõtu üldtingimusi puistekaubale nende teisaldamisel isevoolu teel või transportöri abil.

Standard ei rakendu kottides või pakendis kauabale, vagunites, laevadel, silodes või kaubaladudes asuvatele staatilistele kogustele.

Samuti ei kehti käesolev standard seemneviljale.

EVS 815:2003 Mais. Niiskusesisalduse määramine

Standard käsitleb inimtoiduks mõeldud maisis ja jahvatatud maisis niiskusesisalduse määramise meetodit.

EVS 820:2003 Teravili ja teraviljasaadused. Toorkiu määramine

Standard käsitleb teraviljas ja teraviljasaadustes toorkiu määramist.

EVS-ISO 3093:2003 Teravili. Langemisarvu määramine

Käesolev meetod on rakendatav teraviljale ja eriti nisule ja rukkile ja nendest jahvatatud toodetele jaotise 7.5 nõuetele vastavate osakeste suurusega. Meetod ei ole praegusel ajal rakendatav õlletööstuses.

EVS-ISO 5529:2003 Nisu. Setteindeksi määramine. Zeleny test

Standard kirjeldab meetodit, mis on tuntud kui "Zeleny settetest", et hinnata üht nisu kvaliteeti määrapatest faktoritest sellest valmistatud jahu küpsetusjõu suhtes. Käesolev meetod kehtib ainult nisule *Triticum aestivum*.

EVS-ISO 7305:2003 Jahvatatud teraviljasaadused. Rasva happesuse määramine

Standard kirjeldab jahvatatud teraviljasaadustes "rasva happesuse" määramise meetodit. See on rakendatav tavanisust ja kõvast nisust saadud jahule ja mannale, samuti makaronitoodetele.

Märkus. Meetod on kasutatav ka teraviljale, maisist saadud jahule ja mannale, ja rukkiahule ja kaerahelvestele, kuid enne rakendusala kinnitamist on lisaks tingimata vajalik laboratooriumitevaheline test.

EVS-ISO 9648:2003 Sorgo. Tanniinisalduse määramine

Standard sätestab üldmeetodi sorgo tanniinisalduse määramiseks.

See ei ole spetsiifiline ühele kindlale polüfenoolide tüübile. Selle sobivus kasutamiseks on põhjendatud usaldusväärse negatiivse korrelatsiooniga, mis on tuvastatud tulemuste vahel, millised on saadud mõõtes sorgo metabolismeerivat energiat loomkatsetel kukkedega ja käesolevat meetodit kasutades.

EVS 814:2003 Normaalbetooni külma-kindlus. Määratlused, spetsifikatsioonid ja katsemeetodid

Standardis püstitakse nõuded normaalbetooni külmakindlusele sõltuvalt betoontarindi eksp-luatatsioonitingimustele ja antakse katsemeetod selle otseseks määramiseks. Betoontarindite projekteerimisel tuleb sageli arvestada peale külmakindluse nõude ka teiste keskkonna-klasside möjuritega (EVS-EN 206-1 jaotis 4.1), mis võivad tingida erimeetmete rakendamist nii betooni koostisosade valikul, tehnoloogilises protsessis kui ka betoontarindite konstrukt-sioonis (näiteks armatuuri kaitsekihi määra-misel).

Standardis on kirjeldatud betooni külma-kindluse hindamist külmutamis-sulatamis-meetodiga otsesel katsetamisel ettenähtud katsetus(külmutus)keskkonnas, milleks võib olla kas vesi või naatriumkloriidi vesilahus. Arvestades standardis EVS-EN 206-1 määratletut konkreetset keskkonnaklassi, mille alusel toimub betoontarindi külmakindluse klassi ja sellekohase vastavuskriteeriumi valik, võib üksikjuhtudel nii keskkonnaklassi (külma-kindluse klassi) kui ka katsetus(külmutus)-keskkonna määramine toimuda osapoolte kokkuleppel.

Standard ei käitle standardi EVS-EN 206-1 klassifikatsiooni järgi raske- ega kerabetooni (mull- ja korebetoon).

Märkus. Mõnedel juhtudel ei pruugi katsemeetod sobida eribetoonide, näiteks kõrgtugeva betooni, isetihenduva betooni jt katsetamiseks. Sel juhul tuleb kasutada kokkuleppelist erimetoodikat.

Käesoleva standardi kinnitamisega eeldatakse, et standardile EVS-EN 206-1 koostatakse Eesti rahvuslik lisa.

EVS-ISO/IEC 9126-1:2003 Tarkvara-tehnika. Toote kvaliteet. Osa 1: Kvalitedimudel

ISO/IEC 9126 see osa kirjeldab tarkvaratoote kvaliteedi kaheosalist mudelit: a) sisekvaliteeti ja väliskvaliteeti ning b) kasutuskvaliteeti. Mudeli esimene osa spetsifitseerib kuus sise- ja väliskvaliteedi näitajat, mis jagunevad edasi allnäitajateks. Neid allnäitajaid kuulutatakse väliselt, kui tarkvara kasutatakse arvutisüsteemi osana, ning nad on tarkvara siseatribuutide tulemuseks. ISO/IEC 9126 see osa ei detailiseeri sise- ja väliskvaliteedi mudelit allapoole allnäitajate taset.

Mudeli teine osa spetsifitseerib neli kasutuskvaliteedi näitajat, kuid ei detailiseeri kasutuskvaliteedi mudelit allapoole näitajate taset. Kasutuskvaliteet on tarkvaratoote kuue kvaliteedinäitaja ühendatud toime kasutaja jaoks.

Määratletud näitajad on kohaldatavad iga liiki tarkvarale, sealhulgas püsivaras sisalduvatele programmidele ja andmetele. Näitajad ja allnäitajad loovad tarkvaratoote kvaliteedi ühtse terminoloogia. Nad loovad ka raamstrukturi tarkvara kvaliteedinõete spetsifitseerimiseks ja kompromisside tegemiseks tarkvaratoote suutlikkusvõimaluste vahel.

Normatiivilsila A annab soovitusi ja nõudeid tarkvaratoote meetrumite ja kasutuskvaliteedi meetrumite kohta. Nende meetrumite näiteid on ISO/IEC 9126 teistes osades. Neid meetrumeid saab rakendada tarkvaratoodete, sealhulgas vahetoodete kvaliteedinõete ja lahenduseesmärkide spetsifitseerimisel. Standardis ISO/IEC 14598-1 on seletatud, kuidas seda kvalitedimudelit saab rakendada tarkvaratoodete hindamisel.

ISO/IEC 9126 see osa võimaldab tarkvara hankimise, nõuete, väljatöötuse, kasutamise, hindamise, toe, hoolduse, kvaliteeditagamise ja auditeerimisega seotuil spetsifitseerida ja hinnata tarkvaratoodete kvaliteeti eri vaatepunktidest. Näiteks võivad teda kasutada arendajad, hankijad, kvaliteeditagamise personal ja sõltumatud hindajad, eriti need, kes vastutavad tarkvaratoodete kvaliteedi spetsifitseerimise ja hindamise eest. ISO/IEC 9126 selles osas määratletud kvalitedimudeli kasutamise näidete hulka kuuluvad

- nõuete määratluse täielikkuse valideerimine;
- tarkvaranõete piiritlemine;
- tarkvara projekteerimise eesmärkide piiritlemine;
- tarkvara testimise eesmärkide piiritlemine;
- kvaliteeditagamise kriteeriumide piiritlemine;
- valmis tarkvaratoote vastuvõtukriteeriumide piiritlemine.

MÄRKUS 1. ISO/IEC 9126 seda osa saab kasutada koos standardiga ISO/IEC 15504 (mis käsitleb tarkvaraprotsesside hindamist), et luua

- raamstruktur tarkvaratoote kvaliteedi määratlemiseks tellija-tarnija-protsessis;
- tugi läbivaatusele, verifitseerimisele ja valideerimisele ning raamstruktur kvaliteedi kvantitatiivseks hindamiseks abiprotsessis;

- tugi organisatsiooni kvaliteedieesmärkide püstitamiseks haldusprotsessis.

MÄRKUS 2. ISO/IEC 9126 seda osa saab kasutada koos standardiga ISO/IEC 12207 (mis käitleb tarkvara elutsükli), et luua

- raamstruktur tarkvaratoote kvaliteedinõuete määratlemiseks elutsükli primaarprotsessis;
- tugi läbivaatusele, verifitseerimisele ja valideerimisele elutsükli abiprotsessides.

MÄRKUS 3. ISO/IEC 9126 seda osa saab kasutada koos standardiga ISO 9001 (mis käitleb kvaliteeditagamise protsesse), et luua

- tugi kvaliteedieesmärkide püstitamisele;
- tugi lahenduse läbivaatusele, verifitseerimisele ja valideerimisele.

EVS-ISO/IEC TR 9294:2003 Infotehnoloogia. Tarkvara dokumentatsiooni halduse suunised

Tehniline aruanne pakub suuniseid tarkvara dokumentatsiooni halduse kohta neile juhtidele, kes vastutavad tarkvara või tarkvarapõhiste toodete valmistuse eest. Need suunised on mõeldud aitama juhtidel tagada, et nende organisatsioonis luuakse toimiv dokumentatsioon.

See aruanne käitleb poliitikaid, standardeid, protseduure, ressursse ja plaane, mille eest juhtidel tuleb hoolitseda tarkvara dokumentatsiooni toimivaks halduseks.

Antavad suunised on mõeldud rakendatavaina kõigile tarkvara tüüpidele, alates lihtsaimast programmist ja lõpetades keerukaima tarkvarakomplekti või -süsteemiga. Hõlmatud on kõik tarkvara dokumentatsiooni tüübidi, mis on seotud tarkvara elutsükli kõigi jätkudega.

Tarkvara dokumentatsiooni halduse põhimõtted on ühesugused sõltumatult projekti mahust. Väikeste projektide puhul ei tarvitse paljud selles aruandes esitatud üksikasjad olla rakendatavad, kuid põhimõtted jäavad samaks.

Juhid võivad kohandada neid soovitusi oma konkreetsetele vajadustele.

Tuleks rõhutada, et suunised on antud dokumentatsiooni halduse seisukohalt. Esitatud ei ole üksikasjalikke nõuandeid näiteks tarkvaradokumentide sisu ja ülesehituse kohta.

EVS-ISO/IEC TR 13335-5:2003 Infotehnoloogia. Infoturbe halduse suunised. Osa 5: Võrguturbe halduse suunised

ISO/IEC TR 13335-5 annab infoturbe halduse eest vastutajaile suuniseid võrkude ja side kohta. Need suunised aitavad piiritleda ja analüüsida sidega seotud tegureid, mida tuleks arvestada võrguturbe nõuete kehtestamisel.

ISO/IEC TR 13335 see osa põhineb käesoleva tehnilise aruande 4. osal, andes sissejuhatuse sobivate turvameetmealade piiritlemissidevõrguühendustega seotud turvalisuse seisukohalt.

EVS-ISO/IEC TR 15504-9:2003 Infotehnoloogia. Tarkvaraprotsesside hindamine. Osa 9: Sõnastik

ISO/IEC TR 15504 see osa määratleb terminid, mida kasutatakse kogu dokumendis ISO/IEC TR 15504.

Leidmise hõlbustamiseks esitatakse terminid algul tähestikjärjestuses, mõistmise hõlbustamiseks määratletakse samad terminid seejärel sugulastermineid koondavate loogiliste rühmadena.

EVS-ISO/IEC 17799:2003 Infotehnoloogia. Infoturbe halduse menetluskoodeks

See standard annab soovitusi infoturbe halduse kohta, kasutamiseks kõigile neile, kes vastutavad turbe algatamise, evituse või säilitamise eest oma organisatsioonis. Ta on mõeldud andma ühist alust organisatsiooni turvastandardite ja toimiva turbahalduse menetlusviisi väljatöötamiseks ning tagama kindlustunnet organisatsioonidevahelises ajajamises. Selle standardi soovitusi tuleks valida ja kasutada kooskõlas kehtivate seaduste ja eeskirjadega.

KVALITEET

15. ülevaade ISO 9000 ja ISO 14000 sertifitseerimisest

Pealkirja all *Global perspectives on global standards* ilmus ajakirja *ISO Management Systems* 2003. a esimeses numbris rohkete värviliste diagrammidega illustreeritud pikem ülevaade ISO 9000 ja ISO 14000 järgi sertifitseeritud ettevõtetest.

15. korda ilmuv ülevaade võtab kokku 5398 ISO 9000 ja ISO 14000 järgi sertifitseeritud firma tulemused Põhja-Ameerika, Euroopa ja Aasia viieteistkümnest majanduspiirkonnast. Võrreldakse motivatsioone ja kasusid, kuidas need erinevad majanduspiirkondade ja ärisektorite kaupa.

ISO 9000 järgi sertifitseerimise motivatsiooniks on nimetatud kulude alandamist, kvaliteedi parendamist, turunduseeliseid, survet tarbijate poolt, paljude konkurentide sertifitseerimist, teiste kasu, võimalike kaubandustõkete vältimist, töötajate teadlikkuse tõstmist, suhteid võimuorganitega, firma imagot.

Suurimat kasu saadi ISO 9000 sertifitseerimisest firmade vastute põhjal kvaliteedi parendamisest, kliendi rahulolu suurendamisest, paranenud protseduuridest ja firma imagost.

Maade ja äisektorite lõikes erinesid nii saadavad kasud kui ka motivatsioonid. Nii toimub nt Prantsusmaal ja Taiwanis ISO 9000 järgi sertifitseerimine täiesti erinevatel põhjustel ning ka saadavad kasud erinevad suuresti. Nt nimetasid paranenud protseduure Austraalia, Kanada ja Prantsusmaa firmad. Jaapanis peeti oluliseks kõrgemat "töötajate moraali", Hong-Kongi aruandes nimetati suhete paranemist võimorganitega. Sama mudel valitseb sektorite lõikes. Nt farmaatsiatööstus nimetas ka enam kui teised äisektorid paranenud suhteid võimuorganitega.

Abiks ISO 9000 sarja standardite paremal kasutamisel

ISO 20. veebruari pressiteade juhib veelkord tähelepanu ISO poolt koostatud tasuta saadavatele väljaannetele, mis aitavad kasutajaid saada parimat teavet ISO 9000:2000 seeria standardite kohta.

Need kaks väljaannet on tõlgitud ka eesti keelde ja tasuta mahalaadimiseks saadaval EVS veebilehel.

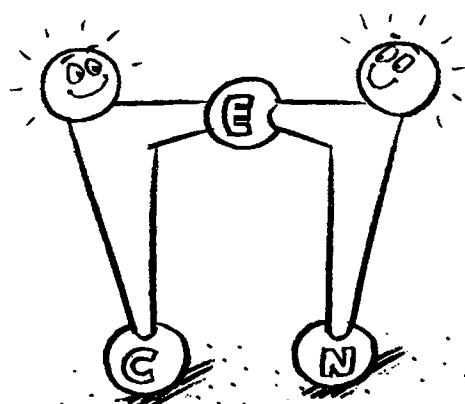

Need kahte "Kvaliteedijuhtimise põhimõtted" ja "ISO 9000 standardite vcalik ja kasutamine" soovitame lugeda kõigil, kes alustavad kvaliteedijuhtimissüsteemide evitamisega. Paberversioonid on müügil Standardikeskuses.

CEN UUDISED

VIIMASEL AJAL ILMUNUD CEN SEMINARIKKULEPPED

Koostootmine

CWA 14642:2003 : *Electrical interface for domestic cogeneration – Requirements for distribution network connection for micro-cogeneration systems for domestic use up to 16 A per phase in low-voltage distribution networks (230/400 V)*

Annab võrguühenduse põhinõuded, mis võimaldavad energiat transportida määratud kohast elektrivõrkudesse tagades samal ajal kodus seadme ja võrgu töö ohutuse.

CWA antakse üle CENELECile, et see võtta üle Euroopa standardiks.

Väärtpaperite trükkimine

CWA 14641:2003 : *Security management system for secure printing*

See CWA sätestab kriteeriumid rahatähitede, magnetkaartide, passide, vautserite jne trükkimise kvaliteedijuhtimissüsteemi ja ohutuse tagamiseks. Eesmärgiks on kehtestada antud dokumendil põhinev sertifitserimissüsteem, mis aitaks võidelda võltsingute röövimiste ja teiste kuritegudega.

Ehitus

CWA 14646:2003 : *Execution standards for the use and installation of post-tensioning kits for pre-stressing of structure and qualification of the specialist company and its personnel*

Infotehnoloogia

CWA 14643:2003 *Internalisation of the IEEE Learning Object Metadata*

CWA 14644:2003 *Quality Assurance Standards (Kvaliteeditagamisstandardite rakendamine õpetamissprotsessis)*

CWA 16645:2003 *Availability of alternative language version of a learning resource in IEEE LOM*

CWA 14365:2003 *Guide on the use of Electronic Signature*

ISO UUDISED

Sotsiaalne vastutus

Huvitatud osapooltest koosnev konsultatiivrühm hakkas analüüsima kas ja kuidas ISO aitab organisatsioonidel täita sotsiaalse vastutuse nõuet. Konsultatiivrühm pidas oma esimese koosoleku jaanuaris 2003 Kanadas ja teise veebruaris Šveitsis.

Aruanne tehtu kohta on kavas esitada 13.-14. märtsil Genfis toimuval ISO Nõukogu koosolekul.

Mis siis on see salapärane sotsiaalne vastutus (*Corporate Social Responsibility CSR*)?

Tänaseks pole veel leitud ühtset ning kõiki osapooli rahuldavat versiooni, CSRs enimlevinud definitsioon on "ettevõtetepoolne vabatahtlik püüd integreerida oma igapäevasesse äritegevusesse ning osanikega suhtlemisse võimalikult palju sotsiaalseid ning keskkonnaalaseid elemente". Sotsiaalselt vastutustundliku tegevusena ei kvalifitseeru aga üksnes olemasoleva seadusandlusega kooskõlas tegutsemine, vaid lisapingutuste tegemine eesmärgiga investeerida nõutust enam inimkapitali, keskkonda ja osanikega suhtlemisse.

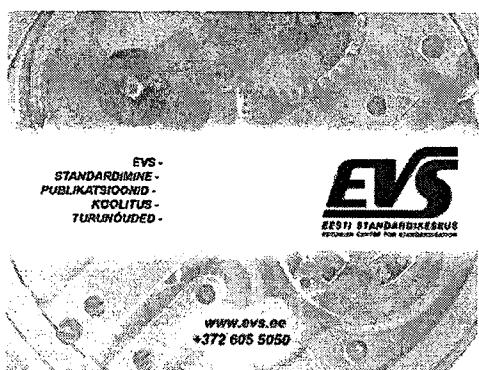

UUED TRÜKISED

EVS mini CD

Soovijatel on võimalus osta EVS uus mini CD, mis sisaldab:

- EVS tutvustuse
- Standardimise korralduse
- EVS publikatsioonid
- Turunõuded

CD hind on 50 krooni

ILMUS
EESTI STANDARDITE LOETELU
Seisuga 1. jaanuar 2003

Seekord on loetelu kolmes köites.

Paberversioon maksab 265 krooni.

Loetelu on üleval ka meie veebilehel vt kataloog

ISO/IEC Guide 68 Arrangements for the recognition and acceptance of conformity assessment results

Uue ISO/IEC Juhendi eesmärgiks on aidata vähendada üleliigseid, kulukaid ja aeganõudvaid vastavushindamise aspekte tõstes sellega rahvusvahelise kaubanduse efektiivsust.

Kaubad ja teenused liiguvad üle riigipiiride, äripartnerid ja riigiasutused võivad nõuda standardite, õigusaktide ja muude nõuete täitmise kontrollimist s.o vastavushindamist. Eksportijate üks põhilisi raskusi seisneb toodete, teenuste, süsteemide, protsesside ja materjalide mitmekordsete katsete ja sertifitseerimise vajaduses. Neid kulutusi aitab järslt vahendada toodete ühekordne katsetamine ja katsetulemuste tunnustamine kõikidel turgudel. Uus juhend pakubki selleks protseduure. Juhend on koostatud lihtsas keeles ja arusaadavalta ka neile, kes ei ole vastavushindamisega väga kursis.

Juhendi hind CHF 52.-

Primer on Standards
Uncovering the mysteries of standardization in Europe

CENELEC väljaanne tutvustab CENELEC-i, Euroopa standardeid, CENELEC-i Vastavushindamise Foorumit, Euroopa standardimissüsteemi ja selle suhteid EÜ seadusandlusega, CE märgistust, vastavushindamist ja turujärelevalvet seoses Uue lähewnmisviisi direktiividega.

UUED STANDARDID JA KAVANDID ARVAMUSKÜSITLUSEKS

See EVS Teataja osa avaldab andmed uutest vastuvõetud Eesti standarditest ja avalikuks arvamusküsitluseks esitatud standardite kavanditest Rahvusvahelise standardite klassifikaatori (ICS) järgi.

Samas jaotises on toodud andmed nii eesti keeles avaldatud kui ka jõustumisteatega Eesti standarditeks ingliskeelsetena vastuvõetud rahvusvahelistest ja Euroopa standarditest. Kuna võimalusel on ingliskeelsena vastuvõetud standardi nimetus ja käitusala tõlgitud eesti keelde ja lootelust ei ole aru saada, millised standardid on tõlgitud eesti keelde, on eesti keeles avaldatud standardid toodud ka eraldi nimekirjana Teataja lõpus.

Eesmärgiga tagada standardite vastuvõtmine järgides konsensuse põhimõtteid, peab standardite vastuvõtmisele eelnema standardite kavandite avalik arvamusküsitlus, milleks ettenähtud perioodi jooksul on ajasthuvitatult võimalik tutvuda standardite kavanditega ning teha ettepanekuid.

EVS Teatajas on esitatud arvamusküsitlusele:

- 1) Euroopa ja rahvusvahelised standardid, mis on kavas vastu võtta Eesti standarditeks jõustumisteatega (kavandid kättesaadaval standardina inglise keeles EVS raamatukogus ja neid saab osta müügigrupist; EVS tehnilistel komiteedel on võimalik saada koopiaid oma käitusalaga kokkulangevatest standarditest EVS kontaktisiku kaudu);

- 2) Eesti standardite kavandid, mis Eesti standardimisprogrammi järgi on jõudnud arvamusküsitluse etappi (kavandid on kättesaadavad eesti keeles standardiosakonnas, neid saab osta müügigrupist);
- 3) Euroopa (prEN) standardite kavandid, mis on saadetud liikmetele arvamusküsitluseks (kavandid on kättesaadavad EVS raamatukogus, v.a Euroopa standarditeks ülevõetavate nende ISO tehniliste komiteede kavandid (prEN ISO), mille töös EVS ei osale, ja neid saab osta müügigrupist. EVS tehnilistel komiteedel on võimalik saada koopiaid oma käitusalaga kokkulangevatest kavanditest EVS kontaktisiku kaudu).

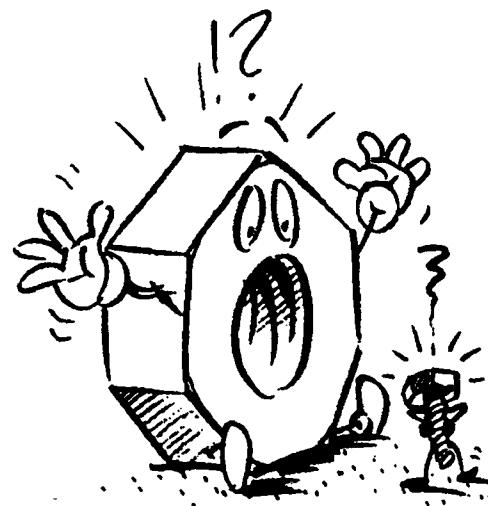

EVS Teatajas on kavandid identifitseeritud sellele standardite andmebaasis omistatud projekti numbri järgi (nt prEVS 18958), kavandite saamiseks on soovitatav ära näidata ka kavandiga identse standardi tähis. Teavet Eesti standardimisprogrammist saab standardiosakonnast.

Kavandite arvamusküsitlusel on eriti oodatud teave, kui rahvusvahelist või Euroopa standardit ei peaks vastu võtma Eesti standardiks (vastuolu Eesti õigusaktidega, pole Eestis rakendatav jt põhjustel).

See Euroopa standard kehtib soojusarvestite kohta; nende seadmetega mõõdetakse seda soojushulka, mida soojusvahetustsüklis neelab või annab ära soojust edasikandev vedelik. Soojusarvesti näitab soojuse kogust ametlikult kehtivates ühikutes. See standard ei käitle arvesti enda kohta kehtivaid elektriohutuse nõudeid.

Electrical insulating materials - Thermal endurance properties - Part 3: Instructions for calculating thermal endurance characteristics

Specifies the calculation procedures to be used for deriving thermal endurance characteristics from experimental data obtained in accordance with the instructions of IEC 60216-1 and IEC 60216-2.

The experimental data may be obtained using non-destructive, destructive or proof tests. Data obtained from non-destructive or proof tests may be incomplete, in that measurement of times taken to reach the endpoint may have been terminated at some point after the median time but before all specimens have reached end-point. The procedures are illustrated by worked examples, and suitable computer programs are recommended to facilitate the calculations.

Cellulosic papers for electrical purposes - Part 2: Methods of test

Applies to cellulosic papers for electrical purposes. It specifies the methods of test to be used in testing cellulosic papers for electrical purposes to meet the requirements prescribed in the specification sheet of IEC 60554-3. In this standard, reference is made in several places to ISO standards accompanied by a short description of the method used. It is to be understood that this short description is meant for identification purposes only and that all details should be taken from the ISO standard itself.

Electrostatics - Part 3-1: Methods for simulation of electrostatic effects - Human body model (HBM) - Component testing

Describes the discharge current waveforms used to define the HBM and the basic equipment requirements used to develop these waveforms. Test parameters are defined for testing and classifying the electrostatic discharge (ESD) sensitivity of non-powered devices to the HBM. The purpose of this standard is to establish a test model that will replicate HBM failures and will define the HBM transient current discharge waveform and all necessary test parameters to ensure reliable, reproducible test results.

Reproducible data will allow accurate comparisons of HBM ESD sensitivity levels.

Electrostatics - Part 4-3:

Standard test methods for specific applications - Footwear

Describes a test method for determining the electrical resistance of footwear used in the control of electrostatic potential on people. This standard is suitable for use by the manufacturer of footwear as well as the end user. A method for measuring the electrical resistance of footwear alone is described and serves as an acceptance test for new footwear. Insulating footwear is not included within the scope of this standard although the electrical resistance measurement techniques may be applicable.

Railway applications - Compatibility between rolling stock and train detection systems

The scope of this European Standard is to describe a procedure for mutual acceptance of rolling stock to run over specific routes. It describes the methods of measurement of interference currents, the methods of measurement of the susceptibility of train detection systems, the characterisation of traction power

supplies and the procedure for acceptance. The result of the acceptance procedure is a structured justification document referred to as a compatibility case , which documents the evidence that the conditions for compatibility have been satisfied.This European Standard is not generally applicable to those combinations of rolling stock, traction power supply and train detection system which were accepted as compatible prior to the issue of this European Standard. However, as far as is reasonably practicable, this European Standard may be applied to modifications of rolling stock, traction power supply or train detection systems which may affect compatibility. The scope of the compatibility case is restricted to the demonstration of compatibility of rolling stock with a train detection system s characterisation (e.g. gabarit). Radio based signalling systems are not within the scope of this European Standard.

Generic standard to demonstrate the compliance of electronic and electrical apparatus with the basic restrictions related to human exposure to electromagnetic fields (0 Hz - 300 GHz)

The scope of this standard is limited to apparatus which is intended for use by the general public as defined in the Council Recommendation 1999/519/EC of 12 July 1999 on the limitation of exposure of the general public to electromagnetic fields (0 Hz to 300 GHz) (Official Journal L 199 of 30 July 1999). This generic standard applies to electronic and electrical apparatus for which no dedicated product- or product family standard regarding human exposure to electromagnetic fields applies. This generic standard does

not cover equipment, which fulfils the requirements given in EN 50371 or is medical equipment as defined in the Council Directive 93/42/EEC of 14 June 1993 concerning medical devices. The frequency range covered is 0 Hz to 300 GHz. The object of this standard is to demonstrate the compliance of such apparatus with the basic restrictions or reference levels on exposure of the general public related to electric, magnetic, electromagnetic fields and induced and contact current.

Integrated circuits - Measurement of electromagnetic emissions, 150 kHz to 1 GHz - Part 6: Measurement of conducted emissions - Magnetic probe method
Specifies a method for evaluating RF currents on the pins of an integrated circuit (IC) by means of non-contact current measurement using a miniature magnetic probe. This method is capable of measuring the RF currents generated by the IC over a frequency range of 0,15 MHz to 1 000 MHz.

Electricity metering - Data exchange for meter reading, tariff and load control - Part 62: Interface classes

Specifies a model of a meter as it is seen through its communication interface(s). Generic building blocks are defined using object oriented methods, in the form of interface classes to model meters from simple up to very complex functionality.

Information technology - Generic cabling systems

This European Standard specifies generic cabling for use within premises which may comprise single or multiple buildings on a campus. It covers balanced cabling and optical fibre cabling. The standard is optimised for premises in which the maximum distance over which telecommunications services have to be distributed is 2 000 m. The principles of this European Standard may also be applied to installations that do not fall within this range. Cabling defined by this standard supports a wide range of services including voice, data, text, image and video.

Maritime navigation and radiocommunication equipment and systems - Radar - Part 1: Shipborne radar - Performance requirements - Methods of test and required test results

This International Standard specifies the minimum performance requirements, methods of testing and required test results for conformance to performance standards not inferior to those required by IMO resolution MSC.64(67), Annex 4, Radar. In addition it takes account of IMO resolution A.694 and is associated with IEC 60945. When a requirements of this standard is different from IEC 60945, the requirement in this standard shall take precedence. This standard does not include the optional performance requirements for superimposition of selected parts of SENC information. These are specified in IEC 60936-3 - Radar with chart facilities.

Cable networks for television signals, sound signals and interactive services - Part 10: System performance for return paths

This standard is dealing with the transparent return path of cable networks operated in the frequency range between 5 MHz and 65 MHz or parts thereof. Higher frequencies may be used in fibre based networks. This standard lays down the basic methods of measurement for signals typically used in the return path of cable networks in order to access the performance of those signals and their performance limits.

Electromagnetic compatibility (EMC) - Part 2-2: Environment - Compatibility levels for low-frequency conducted disturbances and signalling in public low-voltage power supply systems

This standard is concerned with conducted disturbances in the frequency range from 0 kHz to 9 kHz, with an extension up to 148,5 kHz specifically for mains signalling systems. It gives compatibility levels for public low voltage a.c. distribution systems having a nominal voltage up to 420 V, single-phase or 690 V, three-phase and a nominal frequency of 50 Hz or 60 Hz. Compatibility levels are specified for electromagnetic disturbances of the types which can be expected in public low voltage power supply systems, for guidance in: - the limits to be set for disturbance emission into public power supply systems; - the immunity limits to be set by product committees and others for the equipment exposed to the conducted disturbances present in public power supply systems.

Communication cables - Part 2-1: Common design rules and construction

This European Standard harmonises the standardisation of symmetrical, coaxial and optical cables used for the infrastructure of communication, multimedia and control networks. Most of the cables covered by this European Standard are primarily intended to be used in IT networks. However, they can also be used for other applications with the exception of those which presume a direct connection to the mains electricity supply. This Part 2-1 of the European Standard EN 50290 gives the common rules for the design and construction of symmetrical, coaxial and optical cables used for the infrastructure of communication and control networks. It is to be used in conjunction with EN 50290-1-1 and is completed by generic, sectional, family and detail specifications, as appropriate, to describe in a detailed manner each type of cable with its specific characteristics.

Multi-element metallic cables used in analogue and digital communication and control - Part 1: Generic specification

When used together with EN 50290 and EN 50289, this European Standard covers cables for instrumentation, interconnection of equipment and information technology cabling applications. Cables for information technology cabling systems, covered by this standard are suitable for use in digital and analogue data systems meeting the requirements, for example, of EN 50090-2-1, EN 50090-3-1, EN 50098-1, EN 50098-2 and EN 50173. Instrumentation cables covered by this standard are suitable for connecting instruments and control systems for analogue or digital signal transmission.

Unless otherwise specified, all cables covered by this standard may be subjected to voltages greater than 50 V a.c. or 75 V d.c. but not more than 300 V a.c. or 450 V d.c. and shall meet the essential requirements of the low voltage directive. Due to current limitation related to the conductor cross sectional area, they are not intended for direct connection to

mains electricity supply. The maximum current rating per conductor is less than or equal to 175 mA unless otherwise specified in the relevant sectional specification. Cabling elements as defined in 4.3 of this standard may be incorporated in hybrid construction cables together with coaxial or optical fibre cabling elements.

Optical fibres - Part 1-30:

Measurement methods and test procedures -Fibre proof test

Describes procedures for briefly applying a specified tensile load as a proof test to continuous lengths of optical fibre. The method is applicable to types A1, A2, A3 and B optical fibres.	EVS-EN 60793-1-43:2003 Hind 117,00 Identne IEC 60793-1-43:2001 ja identne EN 60793-1-43:2002 Optical fibres - Part 1-43: Measurement methods and test procedures - Numerical aperture Establishes requirements for measuring the numerical aperture of category A1 graded-index multimode fibre, and its light-gathering ability. This is used to predict launching efficiency, joint loss at splices, and micro/macrobending performance.	Establishes uniform requirements for measuring macrobending sensitivity for category B1 to B4 single-mode optical fibres at 1550 nm and of category A1 multimode fibres at 850 nm and 1300 nm. The standard gives two methods for measuring macrobending sensitivity: power monitoring and cut-back.
EVS-EN 60793-1-31:2003 Hind 83,00 Identne IEC 60793-1-31:2001 ja identne EN 60793-1-31:2002 Optical fibres - Part 1-31: Measurement methods and test procedures - Tensile strength Provides values of the tensile strength of optical fibre samples. Tensile strength values depend on the sample length, loading velocity and environmental conditions. The test can be used for inspection where statistical data on fibre strength is required. Results are reported by means of statistical quality control distribution.	EVS-EN 60793-1-44:2003 Hind 139,00 Identne IEC 60793-1-44:2001 ja identne EN 60793-1-44:2002 Optical fibres - Part 1-44: Measurement methods and test procedures - Cut-off wavelength Provides methods for measuring the cut-off wavelength of single-mode optical fibres. The test method applies to a sample fibre in either an uncabled condition, or in a cable, or as a jumper cable. All methods require a reference measurement, with either a bend-reference technique or a multimode-reference technique.	EVS-EN 60793-1-52:2003 Hind 92,00 Identne IEC 60793-1-52:2001 ja identne EN 60793-1-52:2002 Optical fibres - Part 1-52: Measurement methods and test procedures Change of temperature Defines a test that determines the suitability of optical fibres (types A1a to A1d and B1 to B4) to withstand changes in temperature in actual use, storage and/or transport. The test permits the observation of effects of change of temperature over a given period (following the test Nb of IEC 60068-2-14).
EVS-EN 60793-1-41:2003 Hind 109,00 Identne IEC 60793-1-41:2001 ja identne EN 60793-1-41:2002 Optical fibres - Part 1-41: Measurement methods and test procedures - Bandwidth Two methods are described for measuring bandwidth: impulse response and frequency response. Both methods apply to the measurement of bandwidth of category A1 multimode fibres. Application to other categories of class A multimode fibres is under study. Neither method applies to measurement of type B single-mode fibres.	EVS-EN 60793-1-46:2003 Hind 101,00 Identne IEC 60793-1-46:2001 ja identne EN 60793-1-46:2002 Optical fibres - Part 1-46: Measurement methods and test procedures - Monitoring of changes in optical transmittance Gives two methods for monitoring the changes in optical transmittance of optical fibres and cables that occur during mechanical and environmental testing. It provides a monitor in the change of optical transmission characteristics arising from optical discontinuity, physical defects and modifications of the attenuation slope. The methods are the change in transmittance by transmitted power, and by backscattering. They apply to both multimode and single-mode fibres.	EVS-EN 60794-1-2:2002/A1:2003 Hind 109,00 Identne IEC 60794-1-2:1999/ A1:2002 ja identne EN 60794-1-2:1999/ A1:2002 Optical fibre cables - Part 1-2: Generic specification - Basic optical cable test procedures This section of International Standard IEC 60794-1 applies to optical fibre cables for use with telecommunication equipment and devices employing similar techniques and to cables having a combination of both optical fibres and electrical conductors. The object of this section is to establish uniform requirements for the geometrical, transmission, material, mechanical, ageing (environmental exposure) and climatic characterisation of optical fibre cables, and electrical requirements where appropriate.
EVS-EN 60793-1-42:2003 Hind 179,00 Identne IEC 60793-1-42:2001 ja identne EN 60793-1-42:2002 Optical fibres - Part 1-42: Measurement methods and test procedures - Chromatic dispersion Four methods are described for measuring chromatic dispersion: (a) phase shift, (b) spectral group delay in the time domain, (c) differential phase shift, and (d) interferometry. Methods (a), (b) and (c) apply to class A1 graded-index multimode fibres and class B single-mode fibres. Method (d) applies to single-mode fibres, class B1 to B3 in the 1000 nm to 1700 nm wavelength range. The methods can be applied to laboratory, factory and field measurements of chromatic dispersion. Batch control - Part 2: Data structures and guidelines for languages

This part of this standard on batch control defines data models that describe batch control as applied in the process industries, data structures for facilitating communications within and between batch control implementations and language guidelines for representing recipes. Refer to Annex A for an explanation of the UML notation that is used in this part of this standard. Refer to Annex B for a summary of all of the SQL definitions from clause 5.

Delay and power calculation standards - Part 2: Pre-layout delay calculation specification for CMOS ASIC libraries

Applies to CMOS ASIC libraries which contain cell based primitives and memories to be used during the pre-layout design phase of logic simulation, timing verification and logic synthesis. The delay calculation method addressed in this standard consists of 1) estimation of wire capacitance 2) Delay calculation method based on tablelook-up. With use of DCL and SDF, this delay calculation method helps the user have a unified timing model for various

EDA tools in the pre-layout design phase.

Digital data communication for measurement and control - Fieldbus for use in industrial control systems Part 2: Physical Layer specification

Fieldbus is a digital serial, multidrop, data bus for communication with low-level industrial control and instrumentation devices such as transducers, actuators and local controllers. The Physical Layer provides for transparent transmission of Data Link Layer entities across physical connections. Specifies the requirements for Fieldbus component parts. Also specifies the media and network configuration requirements necessary to ensure agreed levels of: a) data integrity before Data Link error checking; b) interoperability between devices at the Physical Layer

Railway applications - Rolling stock - Combined testing - Part 2: Chopper-fed direct current traction motors and their control

Applies to the combinations of motor(s), chopper and their control, and its object is to specify a) the performance characteristics of electric drives consisting of a chopper, direct current motors, and the related control system b) methods of verifying these performance characteristics by tests. In traction drives, a combined system with chopper and direct current motor(s) without any control between the mechanical output and the chopper is not usual. It is not, therefore, considered in this standard. IEC 60349-1 applies to chopper-fed direct current motors, IEC 61287-1 to power electronic convertors, and IEC 60571 to electronic equipments. As a consequence, IEC 60349-1 describes the tests to demonstrate the compliance of the motor to its specification, while IEC 61287-1 does the same for the chopper.

Electrical installations of buildings - Part 4: Protection for safety Chapter 44: Protection against overvoltages Section 443: Protection against overvoltages of atmospheric origin or due to switching

This section of IEC 60364-4 deals with protection of electrical installations against transient overvoltages of atmospheric origin transmitted by the supply distribution system and against switching overvoltages generated by the equipment within the installation. Consideration shall be given to the overvoltages which can appear at the origin of an installation, to the expected ceraunic level and to the location and characteristics of overvoltage protective devices, so that the probability of incidents due to overvoltage stresses is reduced to an acceptable level for the safety of persons and property, as well as for the continuity of service desired.

The values of transient overvoltages depend on the nature of the supply distribution system (underground or overhead) and the possible existence of a low-voltage protective device upstream of the origin of the installation and the level of the supply system. This section provides guidance where protection against overvoltages is covered by inherent control or assured by protective control. If the protection according to this section is not provided, insulation coordination is not assured and the risk due to overvoltages shall be evaluated.

Electrical installations of buildings - Part 7:

Requirements for special installations or locations Section 708: Electrical installations in caravan parks

The requirements of Part 7 supplement, modify or annul the general requirements of the other parts of IEC 60364. Also supersedes IEC 60585-1 (1977).

This European Standard specifies safety requirements for construction, performance, sizing and marking for swimming aids intended to assist users with movement through the water in the early stages of water awareness, whilst learning to swim or whilst learning part of a swimming stroke. It also gives methods of test for verification of these requirements

STANDARDITE TÜHISTAMINE

Seoses ISO/IEC 19011 ilmumisega tühistatakse järgmised standardid

EVS-EN 30011-1:1997 Kvaliteedisüsteemide auditeerimise juhised. Osa 1:

Auditeerimine

EVS-EN 30011-2:1997 Kvaliteedisüsteemide auditeerimise juhised. Osa 2:

Kvaliteedisüsteemide audiitorite kvalifikatsioonikriteeriumid

EVS-EN 30011-3:1997 Kvaliteedisüsteemide auditeerimise juhised. Osa 3:

Auditiprogrammide juhtimine

EVS-EN ISO 14010:1998 Juhised keskkonnaauditiks. Üldised põhimõtted

EVS-EN ISO 14011:1998 Juhised keskkonnaauditiks. Audit protseduurid.

Keskonnajuhtimissüsteemide auditeerimine

EVS-EN ISO 14012:1998 Juhised keskkonnaauditiks. Keskkonnaaudiitorite

kvalifikatsioonikriteeriumid

Seoses uute versioonide ilmumisega tühistatakse järgmised standardid:

EVS 654:1999 Teravili ja teraviljasaadused. Langemisarvu määramine

EVS 656:1994 Teravili ja teraviljasaadused. Niiskusesisalduse määramine

EVS 678:1995 Teravili. Mahukaalu määramine

EVS 760:1998 Teravili ja teraviljasaadused. Toorproteiinisisalduse määramine

EVS 650:1994 Teraviljast ja kaunviljast jahvatatud toodete proovivõtt

EVS 657:1995 Teravili ja ja kaunvili. Proovivõtt

EVS 764:2000 Nisu. Nisuproovi settetestiks ettevalmistamine

EVS 765:2000 Nisu. Setteväärtsuse määramine (Zeleny järgi)

Eesti standardisse EVS 814:2003 on sattunud trükiviga

Tabel 3 peab olema:

Tabel 3 – Betooni koostisele ja omadustele esitatavad nõuded (informatiivne)

	Külmakindluse klass						
	KK1	KK2	KK3	KK4			
Maksimaalne v/ts *)	0,60	C30/37	0,45	0,40
