HARMONEERITUKS TUNNISTATUD STANDARDID

Tehnilise normi ja standardi seaduse kohaselt avaldab Eesti Standardikeskus oma veebilehel ja väljaandes teavet harmoneeritud standarditest. Harmoneeritud (ühtlustatud) standardid on EL Uue lähenemisviisi direktiividega liituvad standardid. Harmoneeritud standarditeks loetakse need standardid, millele on viidatud EL ametlikus väljaandes *Official Journal*. Harmoneeritud standardite kasutamine on kõige lihtsam viis töendada direktiivide oluliste nõuete täitmist. Lisainfo:

<http://www.newapproach.org/>

<http://ec.europa.eu/enterprise/newapproach/standardization/harmstds>

EVS Teatajas ja EVS kodulehel saab tutvuda Uue lähenemisviisi direktiivide all harmoneeritud standarditega. Ühtlasi avaldame ka, millised neist standarditest on üle võetud Eesti standarditeks. Seekord on avaldatud **meditsiiniseadmete, aktiivsete siirdatavate meditsiiniseadmete ja meditsiiniliste in vitro diagnostikavahendite** standardid (avaldatud novembri 2006 Euroopa Ühenduste Teataja C-seerias).

Kõik seekord avaldatud standardid on üle võetud Eesti standarditeks

NÕUKOGU DIREKTHV 93/42/EMÜ Meditsiiniseadmed

(2006/C 277/02)

15.11.2006

Viidatud standardi tähis	Standardi pealkiri
EN 1639:2004	Stomatoloogia. Meditsiinivahendid stomatoloogias. Instrumendid / <i>Dentistry - Medical devices for dentistry - Instruments</i>
EN ISO 10993-4:2002/A1:2006	Meditsiinivahendite bioloogiline hindamine. Osa 4: Vastasmõjude hindamiseks läbiviidavad valikkatsed verega / <i>Biological evaluation of medical devices - Part 4: Selection of tests for interactions with blood</i>
EN ISO 11138-2:2006	Bioloogilised stüsteemid sterilisaatorite ja sterilisatsiooniprotsesside katsetamiseks. Osa 2: Spetsiaalsüsteemid kasutamiseks etüleenoksiidsterilisaatorites / <i>Sterilization of health care products - Biological indicators - Part 2: Biological indicators for ethylene oxide sterilization processes</i>
EN ISO 11138-3:2006	Bioloogilised stüsteemid sterilisaatorite ja sterilisatsiooniprotsesside katsetamiseks. Osa 3: Spetsiaalsüsteemid kasutamiseks niiske kuumusega steriliseerivates sterilisaatorites / <i>Sterilization of health care products - Biological indicators - Part 3: Biological indicators for moist heat sterilization processes</i>
EN ISO 11979-8:2006	Oftalmilised implantaadid. Intraokulaarsed läätised. Osa 8: Põhinõuded / <i>Ophthalmic implants - Intraocular lenses - Part 8: Fundamental requirements</i>
EN 12183:2006	Manuaalsed ratastoolid. Nõuded ja katsemeetodid / <i>Manual wheelchairs - Requirements and test methods</i>
EN 12184:2006	Elektri jõul töötavad ratastoolid, motorollerid ja nende laadijad. Nõuded ja katsemeetodid / <i>Electrically powered wheelchairs, scooters and their chargers - Requirements and test methods</i>
EN ISO 17665-1:2006	Meditsiiniseadmete steriliseerimine. Niiske kuumusega steriliseerimise valideerimine ja rutiinkontroll / <i>Sterilization of health care products - Moist heat - Part 1: Requirements for the development, validation and routine control of a sterilization process for medical devices</i>

EN ISO 22610:2006	Kirurgilised linad, kitlid ja kaitseülikonnad, mida kasutatakse meditsiiniliste seadmetena patsientide ja seadmete puuhul ning kliinilise personali poolt. Katsemeetod vastupidavusele bakterite läbitungi suhtes niiskelt / <i>Surgical drapes, gowns and clean air suits, used as medical devices, for patients, clinical staff and equipment - Test method to determine the resistance to wet bacterial penetration</i>
-------------------	---

NÕUKOGU DIREKTIIV 90/385/EMÜ Aktiivsed siirdatavad meditsiiniseadmed

(2006/C 277/03)

15.11.2006

Viidatud standardi tähis	Standardi pealkiri
EN ISO 10993-4:2002/A1:2006	Meditsiinivahendite bioloogiline hindamine. Osa 4: Vastasmõjude hindamiseks läbiviidavad valikkatsed verega / <i>Biological evaluation of medical devices - Part 4: Selection of tests for interactions with blood</i>
EN ISO 10993-10:2002/A1:2006	Meditsiiniseadmete bioloogiline hindamine. Osa 10: Ärrituse ja hilise ülitundlikkuse katsed / <i>Biological evaluation of medical devices - Part 10: Tests for irritation and delayed-type hypersensitivity - Amendment 1</i>
EN ISO 10993-11:2006	Meditsiiniseadmete bioloogiline hindamine. Osa 11: Katsed süsteemse toksilisuse hindamiseks / <i>Biological evaluation of medical devices - Part 11: Tests for systemic toxicity</i>
EN ISO 11138-2:2006	Bioogilised süsteemid sterilisaatorite ja sterilisatsioniprotsesside katsetamiseks. Osa 2: Spetsiaalsüsteemid kasutamiseks etüleenoksiidsterilisaatorites / <i>Sterilization of health care products - Biological indicators - Part 2: Biological indicators for ethylene oxide sterilization processes</i>
EN ISO 11138-3:2006	Bioogilised süsteemid sterilisaatorite ja sterilisatsioniprotsesside katsetamiseks. Osa 3: Spetsiaalsüsteemid kasutamiseks niiske kuumusega steriliseerivates sterilisaatorites / <i>Sterilization of health care products - Biological indicators - Part 3: Biological indicators for moist heat sterilization processes</i>
EN ISO 17665-1:2006	Meditsiiniseadmete steriliseerimine. Niiske kuumusega steriliseerimise valideerimine ja rutiinkontroll / <i>Sterilization of health care products - Moist heat - Part 1: Requirements for the development, validation and routine control of a sterilization process for medical devices</i>

NÕUKOGU DIREKTIIV 98/79/EÜ Meditsiinilised in vitro diagnostikavahendid

(2006/C 277/04)

15.11.2006

Viidatud standardi tähis	Standardi pealkiri
EN 14136:2004	Väliste kvaliteedihindamissüsteemide kasutamine in vitro diagnostiliste kontrollimisprotseduuride toimimisnäitajate hindamisel / <i>Use of external quality assessment schemes in the assessment of the performance of in vitro diagnostic examination procedures</i>

WTO SEKRETARIAADILT SAABUNUD TEATISED

Maailma Kaubandusorganisatsiooni WTO sekretariaadilt saabunud õigusaktide eelnõud, milles sisalduvad tehnilised normid võivad saada kaubanduse tehniliksteks tõketeks. Eelnõude kohta on võimalik esitada kommentaare 2 nädalat enne tabelis toodud kuupäeva Majandus- ja Kommunikatsiooniministeeriumi Karl Stern, karl.stern@mkm.ee. Eelnõude terviktekstid ja info EVS Teabekeskusest Signe Ruut tel 605 5062, faks 605 5063, enquiry@evs.ee.

UUED STANDARDID JA KAVANDID ARVAMUSKÜSITLUSEKS

EVS Teataja avaldab andmed uutest vastuvõetud Eesti standarditest ja avalikuks arvamusküsitlesekseks esitatud standardite kavanditest rahvusvahelise standardite klassifikaatori (ICS) järgi. Samas jaotises on toodud andmed nii eesti keeles avaldatud, kui ka jõustumisteatega Eesti standarditeks ingliskeelsetena vastuvõetud rahvusvahelistest ja Euroopa standarditest.

Eesmärgiga tagada standardite vastuvõtmise järgides konsensuse põhimõttel, peab standardite vastuvõtmisele eelnema standardite kavandite avalik arvamusküsitus, milleks ettenähtud perioodi jooksul (reeglina 2 kuud) on ajast huvitatul võimalik tutvuda standardite kavanditega, esitada kommentaare ning teha ettepanekuid parandusteks.

Arvamusküsitleusele on esitatud:

1. Euroopa ja rahvusvahelised standardid ning standardikavadid, mis on kavas vastu võtta Eesti standarditeks jõustumisteatega.

Kavadid on kätesaadavad reeglina inglise keeles EVS klienditeeninduses ning standardiosakonnas. EVS tehnilistel komiteedel on võimalik saada koopiaid oma käsitlusalaaga kokkulangevatest standardite kavanditest EVS kontaktisiku kaudu.

2. Eesti algupäraste standardite kavadid, mis Eesti standardimisprogrammi järgi on jõudnud arvamusküsitleuse etappi. Kavanditega saab tutvuda ning neid osta

Eesti Standardikeskuse klienditeeninduses standard@evs.ee

Arvamusküsitlesel olevate dokumentide loetelus on esitatud järgnev informatsioon standardikavandi või standardi kohta:

- Tähis (eesliide pr Euroopa ja DIS rahvusvahelise kavandi puhul)
- Viide identsele Euroopa või rahvusvahelisele dokumendile
- Arvamusküsitleuse lõppkuupäev (arvamuste esitamise tähtaeg)
- Pealkiri
- Käsitusala
- Keelsus (en=inglise; et=eesti)

Kavandite arvamusküsitlesel on eriti oodatud teave kui rahvusvahelist või Euroopa standardit ei peaks vastu võtma Eesti standardiks (vastuolu Eesti õigusaktidega, pole Eestis rakendatav jt põhjustel). Soovitame arvamusküsitleusele pandud standarditega tutvuda igakuiselt kasutades EVS infoteenust või EVS Teatajat. Kui see ei ole võimalik, siis alati viimase kahe kuu nimekirjadega kodulehel ja EVS Teatajas, kuna sellisel juhul saate info kõigist hetkel kommenteerimisel olevatest kavanditest.

Vastavad vormid arvamuse avaldamiseks Euroopa ja rahvusvaheliste standardikavandite ning algupäraste Eesti standardikavandite kohta leiate EVS koduleheküljelt www.evs.ee.

Health services - Quality management systems - Guide for the use of EN ISO 9004:2000 in health services for performance improvement

This International Standard provides guidelines beyond the requirements given in ISO 9001 in order to consider both the effectiveness and efficiency of a quality management system, and consequently the potential for improvement of the performance of an organization. When compared to ISO 9001, the objectives of customer satisfaction and product quality are extended to include the satisfaction of interested parties and the performance of the organization. This International Standard is applicable to the processes of the organization and consequently the quality management principles on which it is based can be deployed throughout the organization. The focus of this International Standard is the achievement of ongoing improvement, measured through the satisfaction of customers and other interested parties. This International Standard consists of guidance and recommendations and is not intended for certification, regulatory or contractual use, nor as a guide to the implementation of ISO 9001.

Clinical laboratory testing and in vitro diagnostic test systems - Susceptibility testing of infectious agents and evaluation of performance of antimicrobial susceptibility devices - Part 1: Reference methods for testing the in vitro activity of antimicrobial agents against bacteria involved in infectious diseases

This part of ISO 20776 describes one reference method, broth microdilution, for determination of MICs. The MIC reflects the activity of the drug under the described test conditions, and can be interpreted for clinical management purposes by taking into account other factors, such as drug pharmacology or bacterial resistance mechanisms. This allows categorization of bacteria as "susceptible" (S), "intermediate" (I), or "resistant" (R). In addition, MIC distributions can be used to define wild type or non-wild type bacterial populations. Although clinical interpretation of the MIC value is beyond the scope of this part of ISO 20776, modifications of the basic method are required for certain antimicrobial agent - bacteria combinations to facilitate clinical interpretation. These modifications are included in a separate table. It is advisable to compare other susceptibility testing methods (e.g. routine methods or diagnostic test devices) with this reference method for validation, in order to ensure comparable and reliable results.

BETOONKONSTRUKTSIOONID. Osa 1-2:**Tulepüsivusarvutus**

EVS/TS 1992-1-2 käsitleb betoonkonstruktsoonide arvutamist tulekahjukoormustega ja kasutada tuleb seda koos EVS 1992-1-1 ja EVS-EN 1991-1-2-ga. Käesolev dokument esitab täiendusi ja erinevusi konstruktsoonide arvutamisest normaaltemperatuuril. Osa I-2 käsitleb ainult passiivseid konstruktsoonilisi (ehituslikke) tulekitsemeetodeid. Aktiivseid tulekitsemeetodeid ei käsitleta. Osa I-2 on rakendatav konstruktsoonidele, mis üldise tuleohutuse tagamiseks peavad täitma järgmisi nõudeid: -vältima konstruktsooni enneaegset varisemist, -tökestama tulekahju levikut (leegid, kuum gaas, äärmuslik kuumus) väljapoole kindlaksmääratud ala (eraldusfunktsioon). Osa 1-2 annab eeskirjad ja rakendusjuhised (vt EVS 1992-1-1 jaotis I.2) jaotises (3) toodud nõuete täitmiseks konstruktsoonide projekteerimisel (väljendub nt nõutavas standardtulepüsivuses). Osa 1-2 rakendub konstruktsoonidele või nende osadele, mis kuuluvad EVS 1992 osade 1-1 ja 1-3 kuni 1-6 kasutusvaldkonda. Ei rakendu: -väliste pingearmatuuriga konstruktsoonidele, -koorikkonstruktsoonidele.

Kaitse elektrilöögi eest. Ühisnõuded paigaldistele ja seadmetele

Muudatus A1:2006 standardile EVS-EN 61140:2003, mis käsitleb inimeste ja loomade kaitset elektrilöögi eest. Ta on ette nähtud selleks, et esitada põhiprintsiibid ja -nõuded, mis on ühised nii elektripaigaldistele kui ka -süsteemidele ja -seadmetele või on kasutatavad nende koordineerimiseks. Standard on koostatud igasuguse pingega elektripaigaldiste, -süsteemide ja -seadmete kohta. Märkus. Standardis on sätteid, mis käivad madal-või kõrgepingeliste elektripaigaldiste, -süsteemide ja -seadmete kohta. Madalpingeks loetakse käesoleva standardi seisukohast nimi-vahelduvpinget kuni 1000 V või nimi-alalispinget kuni 1500 V. Kõrgepingeks loetakse nimi-vahelduvpinget üle 1000 V või nimi-alalispinget üle 1500 V. Märkus Z1. Tehnilised komiteed võivad kasutada käesoleva standardi nõudeid oma publikatsioonide alusena. Käesoleva standardi nõuded kehtivad üksnes siis, kui nad sisalduvad või kui neile on viidatud vastavais konkreetseis standardeis. Käesolev standard ei ole mõeldud kasutamiseks eraldiseisva standardina.

Kaitse elektrilöögi eest. Ühisnõuded paigaldistele ja seadmetele. KONSOLIDEERITUD TEKST

Applies to the protection of persons and animals against electric shock. It is intended to give fundamental principles and requirements which are common to electrical installations, systems and equipment or necessary for their co-ordination. Prepared for installations, systems and equipment without a voltage limit. NOTE - There are some clauses in this standard which refer to low-voltage and high-voltage systems, installations and equipment. For the purpose of this standard, low -voltage is any rated voltage up to and including 1 000 V a.c. or 1 500 V d.c. High voltage is any rated voltage exceeding 1 000 V a.c. or 1 500 V d.c. The requirements of this standard apply only if they are incorporated, or are referred to, in the relevant standards. It is not intended to be used as a stand-alone standard. Has the status of a basic safety publication in accordance with IEC Guide 104.

Paiksete saasteallikate heited. Vääveldioksiidi massikontsentratsiooni määramine .**Automaatmõõtemeetodite suutlikkusnäitajad**

Käesolev standard kehtestab paiksete allikate heitmetes vääveldioksiidi massikontsentratsiooni pidevaks mõõtmiseks mõeldud automaatmõõtesüsteemide suutlikkusnäitajate kõik väärused. Märkus 1. Kui automaatmõõtesüsteemi suutlikkusnäitajad on loetletud vastavalt tabelile 1, tagab see automaatmõõtesüsteemi usaldusvääruse ja rahuldavad pidevamõõtmise tulemused. Tabelis 1 loetletud andmed on mõõtemeetodi suutlikkusnäitajad, mis hõlmavad kõiki etappe proovivõtust andmete registreerimise ja vajadusel säilitamiseni. Standardit kohaldatakse gaasi väljavõtuga ja väljavõtuta (in situ) automaatsetele vääveldioksiidi mõõtemeetoditele. Mõlema meetoditüübili puhul eeldab standard null- ja kalibrismigaasi kasutamise võimalust ning võrreldavate proovide olemasolu. Automaatmõõtesüsteemi saab kalibridera kalibrismigaaside, standardis ISO 7934 kirjeldatud käsitsi teostatava meetodi või teisel määramispõhimõttel töötava, selle rahvusvahelise standardi kohaselt taadeldud automaatmõõtesüsteemi abil. Üldsuutlikkus (3.7) määratatakse standardi ISO 7934 põhjal või teisel määramispõhimõttel töötava, selle rahvusvahelise standardi kohaselt taadeldud automaatmõõtesüsteemi abil. Praegu kehtivad need näitajad vahemikus 0–0,1 g/m³ ja 0–8 g/m³ (täpsemalt vt tabel 2)

Silmade ja näo võrkaitsetööstuslikuks ja mittetööstuslikuks kasutamiseks mehaaniliste lõökide ja/või kuumuse eest kaitsmiseks

Käesolev Euroopa standard määrab kindlaks materjalid, konstruktsiooni, töökarakteristikud, testimismeetodid ja märgistusnõuded individuaalsele silmade võrkaitsetele, mis kaitsevad mehaaniliste ja/või termiliste ohtude eest tööstuslikul ja mittetööstuslikul kasutamisel. Sellise varustuse hulka kuuluvad: võrkkaitseprillid ja võrkprillid, vörknäokatted metsatöödeks ja/või puude kärpimiseks või aias ja pargis töötamiseks koos kaitsekiivritega või ilma nendeta, vörknäokatted koos kaitsekiivritega või laubakaitsevõrega, mida kasutatakse näiteks terase töötlemisel ja valutöödel.

**Ergonomics of human-system interaction - Part 304:
User performance test methods**

This part of ISO 9241 provides guidance on assessing the visual ergonomics of display technologies using human performance test methods (as opposed to the optical test methods in ISO/DIS 9241-305). Following this standard will help ensure that, for a given context of use, a display meets minimum visual ergonomic requirements. The standard covers only the visual attributes of displays. This standard does not address the ergonomics or the usability of the whole product that houses the visual display. The standard applies to any colour or monochrome visual display attached to a system with which people interact. This includes (but is not limited to): visual displays used with desktop and portable computers; displays used on mobile devices, such as mobile telephones, digital cameras and personal digital assistants; and status displays used on consumer electronics equipment, such as printers, in-car navigation systems and microwave ovens. This extends the scope of the "Visual performance and comfort" test in ISO 9241-3:1992/Amd.1:2000 to include a more diverse range of technologies, users, tasks and environments.

Electrical insulating materials - Thermal endurance properties - Part 6: Determination of thermal endurance indices (TI and RTE) of an insulating material using the fixed time frame method

This part of IEC 60216 specifies the experimental and calculation procedures for deriving the thermal endurance characteristics, temperature index (TI) and relative thermal endurance index (RTE) of a material using the "fixed time frame method (FTFM)". In this protocol, the ageing takes place for a small number of fixed times, using the appropriate number of ageing temperatures throughout each time, the properties of the specimens being measured at the end of the relevant time interval. This differs from the procedure of IEC 60216-1, where ageing is conducted at a small number of fixed temperatures, property measurement taking place after ageing times dependent on the progress of ageing.

Wind turbines -- Part 25-4: Communications for monitoring and control of wind power plants - Mapping to XML based communication profile

The focus of the IEC 61400-25 series is on the communications between wind power plant components such as wind turbines and actors such as SCADA Systems. Internal communication within wind power plant components is outside the scope of the IEC 61400-25 series. The IEC 61400-25 series is designed for a communication environment supported by a client-server model. Three areas are defined, that are modelled separately to ensure the scalability of implementations: 1) wind power plant information model, 2) information exchange model, and 3) mapping of these two models to a standard communication profile. The wind power plant information model and the information exchange model, viewed together, constitute an interface between client and server. In this conjunction, the wind power plant information model serves as an interpretation frame for available wind power plant information. The wind power plant information model is used by the server to offer the client a uniform, component-oriented view of the wind power plant data. The information exchange model reflects the whole active functionality of the server. The IEC 61400-25 series enables connectivity between a heterogeneous combination of client and servers from different manufacturers and suppliers.

Electromagnetic compatibility (EMC) - Part 4: Testing and measuring techniques - Section 5: Surge immunity test

This section of IEC 1000-4 relates to the immunity requirements, test methods, and range of recommended test levels for equipment to unidirectional surge caused by overvoltages from switching and lightning transients. Several test levels are defined which relate to different environment and installation conditions. These requirements are developed for and are applicable to electrical and electronic equipment.

Smart tracker chips - Feasibility study on the inclusion of RFID in Electrical and Electronic Equipment for WEEE management

This Technical Report investigates in the light of the implementation of the WEEE Directive (2002/96/EC) the feasibility of deploying machine readable product identification technologies (e.g. smart tracker chips) to fulfil the marking requirement for the purpose of implementing producer responsibility. The product recognition shall provide information for waste stream management (sorting, reporting and cost allocation). Machine readable product identification technologies can be utilized during every phase of the product life cycle of an EEE. The WEEE management is the last phase. This Technical Report focuses on this phase only.

Mechanical structures for electronic equipment - Tests for IEC 60917 and IEC 60297 -- Part 3: Electromagnetic shielding performance tests for cabinets, racks and subracks

This part of IEC 61587 specifies the tests for empty cabinets and subracks concerning electromagnetic shielding performance, in the frequency range of 30 MHz to 2 000 MHz. Stipulated attenuation values are chosen for the definition of the shielding performance level of cabinets and subracks for the IEC 60297 and IEC 60917 series. The shielding performance levels are chosen with respect to the requirements of the typical fields of industrial application. They will support the measures to achieve electromagnetic compatibility but cannot replace the final testing of compliance of the equipped enclosure. The purpose of this standard is to ensure physical integrity and environmental performance of cabinets and subracks, taking into account the need for different levels of performance in different applications. It is intended to give the user a level of confidence in the selection of products to meet his specific needs. This standard in whole or part applies only to the empty enclosures, for example cabinets and subracks according to IEC 60297 and IEC 60917 and does not apply to the enclosures when electronic equipment is installed.

This standard is applicable to fixed surface mount capacitors for direct current, with metallized electrodes and polyphenylene sulfide dielectric for use in electronic equipment. These capacitors have metallized connecting pads or soldering strips and are intended to be mounted directly onto substrates for hybrid circuits or onto printed boards. These capacitors may have "self-healing properties" depending on conditions of use. They are primarily intended for applications where the a.c. component is small with respect to the rated voltage. Capacitors for radio interference suppression are not included, but are covered by IEC 60384-14.

Telecontrol equipment and systems - Part 5-104:**Transmission protocols - Network access for IEC 60870-5-101 using standard transport profiles**

This part of IEC 60870 applies to telecontrol equipment and systems with coded bit serial data transmission for monitoring and controlling geographically widespread processes. It defines a telecontrol companion standard that enables interoperability among compatible telecontrol equipment. The defined telecontrol companion standard utilizes standards of the IEC 60870-5 series. The specifications of this part present a combination of the application layer of IEC 60870-5-101 and the transport functions provided by a TCP/IP (Transmission Control Protocol/Internet Protocol). Within TCP/IP, various network types can be utilized, including X.25, FR (Frame Relay), ATM (Asynchronous Transfer Mode) and ISDN (Integrated Service Data Network). Using the same definitions, alternative ASDUs (Application Service Data Unit) as specified in other IEC 60870-5 companion standards (for example, IEC 60870-5-102) may be combined with TCP/IP, but this is not described further in this part.

Optical fibres - Part 2: Product specifications - General

This International Standard contains the general specifications for both multimode and singlemode optical fibres. Sectional specifications for each of the four multimode categories: A1, A2, A3, and A4 contain requirements specific to each category. A sectional specification for all single-mode categories contains requirements common to all single-mode fibres. Within each sectional specification, family specifications – found as normative annexes – contain requirements for the applicable sub-categories. These sub-categories are distinguished on the basis of different fibre types or applications. The requirements of this standard apply to all categories. Each sectional specification contains the requirements that are common to all the family specifications that are within it. These common requirements are copied to the family specification for ease of reference. Tests or measurement methods are defined for each specified attribute. Where possible, these definitions are by reference to an IEC Standard – otherwise the test or measurement method is outlined in the relevant sectional specification.

Optical fibres - Measurement methods and test procedures -- Part 1-1: General and guidance

The object of this part of IEC 60793 is to list, and give an overview of, the documents giving the uniform requirements for measuring and testing optical fibres, thereby assisting in the inspection of fibres and cables for commercial (mostly telecommunications) purposes. The individual measurement and test methods are contained in different parts of this standard. They are identified as IEC 60793-1-X, where "X" is an assigned part number, indicating its affiliation to IEC 60793-1. See tables 4 to 7 for a complete listing of all attributes, the assigned document numbers, and the corresponding, previously assigned number for each method:

- a) optical;
- b) dimensional;
- c) mechanical;
- d) environmental.

Optical fibres -- Part 2-20: Product specifications - Sectional specification for category A2 multimode fibre

This part of IEC 60793-2 is applicable to optical fibres type A2a, A2b, and A2c. These fibres are used or can be incorporated in information transmission equipment and optical fibre cables (typically up to 2 km). Three types of requirements apply to these fibres:

- general requirements as defined in IEC 60793-2;
- specific requirements common to the category A2 multimodal fibres covered in this standard and which are given in clause 3;
- particular requirements applicable to individual fibre types or specific applications, which are defined in the normative family specification annexes.

Fibre optic interconnecting devices and passive components performance standard -- Part 1: General and guidance for performance standards

This part of IEC 61753 deals with performance standards for all passive fibre optic products, including connectors, passive optical components, fibre management systems and closures. The IEC 61753 series is published in multiple parts. This Part 1 covers general information on performance standards. It defines those tests and severities which form the performance categories or general operating service environments and identifies those tests which are considered to be product specific. Test and severity details are given in Annex A. Part 1 also includes references, definitions and rules for creating a performance standard, together with informative annexes, such as a description of test sequencing given in Annex B, and other pertinent information. Subsequent parts which form IEC 61753 are known as performance standards and are numbered according to the classification defined in Annex C. These standards contain the minimum test and measurement severities which a specific product must satisfy, in order to be categorized as meeting the requirements for use in a particular service environment. A product performance standard will contain a combination of those tests and measurements which are common to all passive fibre optic products, for a particular service environment or performance category, and those which are considered specific to that particular product in that environment.

Fibre optic interconnecting devices and passive components performance standard -- Part 083-2: Non-connectorised single-mode fibre optic C-band/L-band WDM devices for category C - Controlled environment

This part of IEC 61753 contains the minimum initial test and measurement requirements and severities which a fibre optic C-band/L-band WDM device shall satisfy in order to be categorised as meeting the IEC standard, Category C – controlled environment. The requirements cover devices with single-mode non-connectorised pigtails. C-band/L-band WDM devices combine and / or split C band and L band optical signals. A guard band is required between the used wavelength in the C and L band. Commercially available C-band/L-band WDM devices have narrower wavelength ranges such as 1 530 nm to 1 564 nm for C-band and 1 574 nm to 1 625 nm for L-band, compared with ITU-T Supplement N.39 Definitions, 1 530 nm to 1 565 nm for C-band and 1 565 nm to 1 625 nm for L-band. This standard describes performance standards for commercially available C-band/L-band WDM devices.

Digital Radio Mondiale (DRM) -- Part 2: Digital radio in the bands below 30 MHz - Methods of measurement for DRM transmitters

This part of IEC 62272 describes the methods of measurement to assess the performance characteristics of digital modulated radio transmitters in the bands below 30 MHz for sound and/or data broadcasting in the LF, MF and HF bands, and to facilitate the comparison of measurements which are carried out by different personnel. It contains details of specially selected methods for determining the most important performance parameters of digital radio transmitters. The measurement methods described apply to a limited number of performance parameters, i.e. those which can give rise to ambiguous interpretation due to the use of different methods and conditions. They are neither restrictive nor mandatory: measurements can be chosen for each particular case. The measurement methods described in this standard are intended to be used for type approval tests, quality control tests or acceptance test measurements in factories and on site.

**Ergonomics of human-system interaction - Part 304:
User performance test methods**

This part of ISO 9241 provides guidance on assessing the visual ergonomics of display technologies using human performance test methods (as opposed to the optical test methods in ISO/DIS 9241-305). Following this standard will help ensure that, for a given context of use, a display meets minimum visual ergonomic requirements. The standard covers only the visual attributes of displays. This standard does not address the ergonomics or the usability of the whole product that houses the visual display. The standard applies to any colour or monochrome visual display attached to a system with which people interact. This includes (but is not limited to): visual displays used with desktop and portable computers; displays used on mobile devices, such as mobile telephones, digital cameras and personal digital assistants; and status displays used on consumer electronics equipment, such as printers, in-car navigation systems and microwave ovens. This extends the scope of the “Visual performance and comfort” test in ISO 9241-3:1992/Amd.1:2000 to include a more diverse range of technologies, users, tasks and environments.

Railway Applications - Axlebox lubricating greases - Part 1: Method to test the ability to lubricate ordinary-speed vehicles with speeds up to 200 km/h and high-speed vehicles with speeds up to 300 km/h

This European Standard specifies a testing method and sets the acceptance criteria for the determining of the lubrication ability of lubricating greases intended for the lubrication of axle box bearings. The testing method is referred to in EN 12081. The lubricating ability, primarily related to the capability of lubricating greases to protect against wear, is determined in a roller bearing lubricant test rig. Wear of the rolling bearing rollers, the frictional behaviour and temperature during the test are used to discriminate between lubricating greases. The method is carried out in order to test axlebox greases for ordinary-speed vehicles, with speeds up to 200 km/h, and for greases intended for high-speed vehicles, with speeds up to 300 km/h. The method is a discriminating process, and accepted lubricating greases will be subject to more extensive performance tests according to EN 12082. For purpose of quality assurance and quality control, this test method is also used for batch testing of lubricating greases.

Tähtaeg 1.03.2007

Leather - Test for adhesion of finish

This International Standard specifies a method for measuring the adhesion of the finish to the leather or the adhesion between two adjacent layers of the finish. Depending on the way the leather has been finished, the adhesion of the finish to the leather can be so low over the whole area, or part of it, that the finish separates from the leather during use. With finishes consisting of several layers, the separation may occur between the layers, for example between the pigmented layer and the base coat. The method is valid for all finished leathers with a smooth surface that can be bonded to an adherend-plate without the adhesive penetrating into the finish. Preliminary experiments may be necessary to determine whether these conditions are met. This test method is valid for finished leathers with a finish coat thickness of at least 15 µm.

Installation and equipment for liquefied natural gas - Design and testing of marine transfer systems - Part 2: Design and testing of transfer hoses

This part of EN 1474 gives general guidelines for the design, material selection, qualification, certification, and testing details for Liquefied Natural Gas (LNG) transfer hose for offshore transfer or on coastal weather-exposed facilities. To avoid unnecessary repetition, cross-reference to EN 1474-1 Design and Testing of Transfer Arms, is made for all compatible items, and for References, Definitions and Abbreviations. Where additional References, Definitions and Abbreviations are required specifically for LNG hoses, they are listed in this part. For details of specific LNG transfer system architectures reference should be made to EN 1474-3. Hoses used for LNG transfer are normally large bore: typically from DN 250 (10") to above DN 400 (16") and more, with working design pressures in the range of 10 bar to 20 bar in order to meet the minimum flow rate from the facility of 10 000 m³/hour with a practical number of hoses used for LNG transfer and vapour return. Transfer hoses have to be durable when operating in the marine environment and to be flexible with a minimum bending radius compatible with handling and the operating requirements of the transfer system.

Railway Applications - Axlebox lubricating greases - Part 1: Method to test the ability to lubricate ordinary-speed vehicles with speeds up to 200 km/h and high-speed vehicles with speeds up to 300 km/h

This European Standard specifies a testing method and sets the acceptance criteria for the determining of the lubrication ability of lubricating greases intended for the lubrication of axle box bearings. The testing method is referred to in EN 12081. The lubricating ability, primarily related to the capability of lubricating greases to protect against wear, is determined in a roller bearing lubricant test rig. Wear of the rolling bearing rollers, the frictional behaviour and temperature during the test are used to discriminate between lubricating greases. The method is carried out in order to test axlebox greases for ordinary-speed vehicles, with speeds up to 200 km/h, and for greases intended for high-speed vehicles, with speeds up to 300 km/h. The method is a discriminating process, and accepted lubricating greases will be subject to more extensive performance tests according to EN 12082. For purpose of quality assurance and quality control, this test method is also used for batch testing of lubricating greases.

Plastics - Evaluation of disposability in waste water treatment plants - Test scheme for final acceptance and specifications

This European Standard specifies test methods and criteria which are to be applied in order to verify if a solid plastic material can be considered as disposable in waste water treatment plants, i.e. it does not create problems for the environment and for the drainage systems. In order to reach this conclusion it needs be verified that the plastic material under evaluation is biodegradable under aerobic conditions (i.e. susceptible to mineralization) and water soluble or water dispersible.

Tissue paper and tissue products - Part 10:

Determination of demand water absorption rate and capacity, under controlled hydraulic pressure

This part of ISO 12625 specifies a test method for the volumetric determination of the demand absorbency properties of tissue paper and tissue products upon wetting with water. Specifically it measures the rate and capacity of liquid absorption, without applying a positive external liquid pressure. This part of ISO 12625 has been tested for demand absorption rates of up to 0,35 g/s and a water absorption capacity of 10 grams per gram of paper. During the test, test pieces are placed on a web of fiber strings. This part of ISO 12625 is not applicable to products that hang through the web. It is expressly stated that the direction of impurities and contraries in tissue paper and tissue products should be applied according to ISO 15755. For the determination of moisture content in tissue paper and tissue products, ISO 287 should be applied.

This document describes a method for determining the vertical and horizontal permeability of cylindrical specimens of bituminous mixtures. The standard applies to specimens cored out of the road, specimens from laboratory made slabs or laboratory specimens prepared with a compaction device provided the thickness of the specimen is not less than 2,5 times the nominal maximum particle size of the aggregate in the mixture. The nominal diameter of specimens should be either 100 mm or 150 mm unless the nominal maximum particle size of the aggregate size exceeds 22 mm, when the nominal diameter shall be 150 mm diameter.

Bituminous mixtures - Test methods for hot mix asphalt - Part 22: Wheel tracking

This European Standard describes test methods for determining the susceptibility of bituminous materials to deform under load. The test is applicable to mixtures with upper sieve size less than or equal to 32 mm. The tests are applicable to specimens that have either been manufactured in a laboratory or cut from a pavement; test specimens are held in a mould with their surface flush with the upper edge of the mould.

Bituminous mixtures - Test methods for hot mix asphalt - Part 30: Specimen preparation by impact compactor

This European Standard describes methods of moulding specimens from bituminous mixtures by impact compaction. Such specimens are primarily used to determine bulk density and other technological characteristics e.g. Marshall stability and flow according to EN 12697-34. This European Standard applies to bituminous mixtures (both those made up in a laboratory and those resulting from work site sampling), with an upper aggregate size not larger than 22,4 mm.

STANDARDITE TÖLKED KOMMENTEERIMISEL

Selles jaotises avaldame teavet eesti keelde tõlgitavate Euroopa või rahvusvaheliste standardite kohta. Alates veebruarikuust 2004 ei avaldata teavet arvamusküsitluse jaotises eelpool nimetatud standardite kohta, kuna tegemist on varem jõustumisteate meetodil üle võetud standarditega, mille sisu osas arvamust avaldada ei saa. Standardite tõlgetega on võimalik tutvuda EVS standardiosakonnas ja klienditeeninduses standard@evs.ee.

Tõlge kommenteerimise ja ettepanekute esitamise perioodi lõpp on 01.02.2007

prEVS-ISO 5673-2

Pöllumajandustraktorid ja –masinad. Kardaanvöllid ja käitatav völl. Osa 2: Kardaanvöllide kasutamise kirjeldus, jõuülekande asukoht ja vaba vahemik erinevate haakeseadistega masinatel

Standard esitab kardaanvöllide tüübide ja nende rakendused pöllumajanduses kasutatavatel traktoritel ja liikurmasinatel ning täpsustab (spetsifitseerib) mitmesuguste tööseadiste käitatava völli (sisendvölli) ümber oleva vaba ruumi mõõtmed. Selle eesmärk on tagada sobiv vahemik (vaba liikumisruum, töövahe) jõuülekande ja sellega külgneva tööseadise või traktori koostisosade vahel, kui tööseadisel ja traktoril on kokkusobivad võimsustasemed.

DETSEMBRIKUUS JÕUSTUNUD JA MÜÜGILE SAABUNUD EESTIKEELSED STANDARDID

EVS-EN 12524:2006

Ehitusmaterjalid ja –tooted. Soojus- ja niiskustehnilised omadused.
Projekteerimisel kasutatavad tabelväärtsused 113.-

Standard on Euroopa standardi EN 12524:2000 “Building materials and products-Hygrothermal properties - Tabulated design values” ingliskeelse teksti identne tõlge eesti keelde.

Standard esitab tabelitena soojus- ja niiskustülekanne arvutustes vajalikud ehituskonstruktsioonides tavapäraselt kasutatavate soojuslikult homogeensete materjalide ja toodete andmed. Samuti esitatakse andmed, mis võimaldavad soojus- ja niiskustehniliste arvutuslike soojusväärtsuste arvutamist ja kasutamist erinevates keskkonnatingimustes.

EVS-EN ISO 9251:2006

Soojusisolatsioon. Soojusülekanne tingimused ja materjalide omadused.
Sõnastik 130.-

Standard on Euroopa standardi EN ISO 9251:1995 “Thermal Insulation - Heat transfer conditions and properties of materials - Vocabulary” (ISO 9251:1987) ingliskeelse teksti identne tõlge eesti keelde.

Rahvusvaheline standard määratleb soojusisolatsiooni terminid, mida kasutatakse soojusülekanne tingimuste ja materjalide omaduste kirjeldamiseks.

EVS-EN 13279-1:2006

Kipssideained ja kipsmörди kuivsegud. Osa 1: Määratlused ja nõuded 162.-

Standard on Euroopa standardi EN 13279-1:2005 “Gypsum binders and gypsum plasters – Part 1: Definitions and requirements” ingliskeelse teksti identne tõlge eesti keelde.

Euroopa standard spetsifitseerib hoonete siseruumide seinte ja lagede krohvimisel kasutatavate kipssideaineepõhiste kuivsegude omadused ja toimivuse. Krohv moodustab valmis pealispinna, mida on võimalik täiendavalt töödelda. Toodete koostis valitakse, lähtudes kasutusnõuetest, kasutades peen- või keemilisi lisandeid, täitematerjale ja teisi sideaineid. Hõlmatud on ka käsitsi ja masinaga pealekantavad kipskrohvimördi kuivsegud ja kipsipõhise krohvimördi kuivsegud.

EVS-EN ISO 9346:2006

Soojusisolatsioon. Massiülekanne.

Füüsikalised suurused ja määratlused 204.-
Standard on Euroopa standardi EN ISO 9346:1996 + A1:1996 “Thermal insulation -

Mass transfer - Physical quantities and definitions (ISO 9346:1987)" ingliskeelse teksti identne tõlge eesti keelde.

Rahvusvaheline standard defineerib füüsikalised suurused ja terminid, mis on seotud massiülekandega ja vajalikud soojusisolatsiooni süsteemidele ning toob ära vastavad sümbolid ja ühikud.

EVS-EN ISO 9288:2006

Soojusisolatsioon. Soojuskiirgus.

Füüsikalised suurused ja määratlused 265.-

Standard on Euroopa standardi EN ISO 9288:1996 "Thermal insulation - Heat transfer by radiation - Physical quantities and definitions" (ISO 9288:1989) ingliskeelse teksti identne tõlge eesti keelde.

Rahvusvaheline standard defineerib füüsikalised suurused ja terminid soojusisolatsiooni alalt, mis on seotud soojuskiirgusega.

EVS-EN ISO 7345:2006

Soojusisolatsioon. Füüsikalised suurused ja määratlused 218.-

Standard on Euroopa standardi EN ISO 7345 "Thermal insulation - Physical quantities and definitions" ingliskeelse teksti identne tõlge eesti keelde.

Rahvusvaheline standard määratleb soojusisolatsiooni füüsikalised suurused ja esitab terminitega seonduvad sümbolid ja mõõtühikud.

EVS 865-2:2006

Hoone ehitusprojekti kirjeldus. Osa 2: Põhiprojekti ehituskirjeldus 246.-

Standardi eesmärgiks on ühtlustada hoone ehitusprojekti kirjelduse koosseisu ja anda soovituslikud juhised projekteerijatele selle koostamiseks.

Standard käsitleb kavandatava hoone arhitektuuri, tehnosüsteemide ja -võrkude, krundisise rajatiste, teede ja platside põhiprojekti ehituskirjeldust.

EVS-EN 12519:2006

Aknad ja uksed. Terminoloogia 221.-

Standard on Euroopa standardi EN 12519 "Windows and pedestrian doors - Terminology" ingliskeelse teksti identne tõlge eesti keelde.

Euroopa standard spetsifitseerib uste ja akende puuhul kasutatavad üldmõisted. Erinevaid tüüpe illustreerivad joonised.

EVS-EN 10025-1:2006

Konstruktsiooniterasest kuumvaltsitud tooted. Osa 1: Üldised tehnilised tarnetingimused 190.-

Standard on Euroopa standardi EN 10025-1:2004 "Hot rolled products of structural steels – Part 1: General technical delivery conditions" ingliskeelse teksti identne tõlge eesti keelde.

Standard määratleb nõuded kuumvaltsitud konstruktsiooniterastest leht- ja varras-toodetele, välja arvatud õõnesprofiilid ja torud. Standard määratleb üldised tarneseisundid. Standardis määratletud terased on ette nähtud kasutamiseks keevis-, polt- või neetliidetega konstruktsioonides. Standard ei rakendu pinnakattega toodetele ega terastoodetele, mis on ette nähtud üldiseks kasutamiseks ehituskonstruktsioonides kirjanduses loetletud standardite või eelstandardite kohaselt.

EVS-EN 1279-5:2006

Ehitusklaas. Klaaspaketid. Osa 5: Vastavushindamine 190.-

Standard on Euroopa standardi EN 1279-5:2005 "Glass in building – Insulating glass units – Part 5: Evaluation of conformity" ingliskeelse teksti identne tõlge eesti keelde.

Standard spetsifitseerib ehituses kasutatavatele klaaspakkettidele esitatavad nõuded, vastavuse hindamise ja tehase tootmisohje. Klaaspakkette ettenähtud põhilisteks kasutusaladeks on aknad, uksed, rippfassaadid, katused ja vaheseinad, kus nende servad on kaitstud otsesse ultraviolettkiirguse eest.

EVS 811:2006

Hoone ehitusprojekt 208.-

Standard käsitleb tehnilist dokumentatsiooni, mis kirjeldab kavandatava hoone arhitektuuri, tehnosüsteemide ja -võrkude, krundisise rajatiste, teede ja platside tehnilist lahendust.

Standard ei käsitle dokumentatsiooni, mis kirjeldab ehitustööde korraldamist. Standard ei käsitle tehnoloogia projekteerimist. Eeldatud on, et hoone projekteerijad saavad tellijalt igas staadiumis vajaliku detailsusega lähteandmed ruumide, keskkonna ja tehnosüsteemide projekteerimiseks. Projekteerimise lähteandmeid selgitavaid eeltöid (vajadusanalüüs, majandusanalüüs, tasuvusuuringud, asukohavariantide võrklused, ideekavandid) ei loeta käesoleva standardi mõistes ehitusprojekteerimise hulka kuuluvaiks. Standard ei hõlma jooniste vormistamist.

EVS-EN 12101-3:2006

Suitsu ja kuumuse kontrollsüsteemid. Osa 3: Suitsu ja kuumuse eemaldamise sundventilatsiooniseadmete spetsifikatsioon 199.-

Standard on Euroopa standardi EN 13775-4:2004 "Smoke and heat control systems – Part 3: Specification for powered smoke and heat exhaust ventilators" ja selle paranduse AC:2005 ingliskeelse teksti identne tõlge eesti keelde.

Euroopa standard täpsustab nõuded ja esitab meetodid suitsu ja kuumuse eemaldamise ventilatsioonisüsteemi osana paigaldamiseks ette nähtud suitsu ja kuumuse eemaldamise sundventilatsiooniseadmete katsetamiseks. Standard esitab ka suitsu ja kuumuse eemaldamise sundventilatsiooniseadmete valiku ja selle mootorite heakskiidumenetluse piiratud arvu katsetega.

EVS-EN 12101-6:2006

Suitsu ja kuumuse kontrollsüsteemid. Osa 6: Rõhuvahesüsteemide spetsifikatsioon. Komplektid 305.-

Standard on Euroopa standardi EN 12101-6:2005 "Smoke and heat control systems – Part 6: Specification for pressure differential systems – Kits" ja selle trükivigade paranduse AC:2006 ingliskeelse teksti identne tõlge eesti keelde.

Standard käitleb rõhuvahesüsteeme, mis kavandatakse suitsu peatamiseks hoone suitsu mittepidavate füüsилiste takistuste nagu uste (avatud või suletud) või muude sarnaselt piiratud avade juures. Dokument käitleb rõhuvahet kasutavate suitsu kontrollsüsteemide parameetrite arvutusmeetodeid kui projekteerimisprotsessi osa. Toodud on kasutatavate süsteemide katseprotseduurid, samuti asjakohaste ja kriitiliste paigaldus- ja kasutuselevõtuprotseduuride kirjeldused, mis on vajalikud arvutatud kavandi rakendamiseks hoones. Käsitletud on süsteeme, mis on ette nähtud evakuatsiooniteede (trepikojad, koridorid ja tamburid kaitmiseks), samuti süsteeme, mis tagavad kaitstud tugiala päistemeeskonnale.

EVS-EN 60990:2006

Puutevoolu ja kaitsejuhivoolu

mõõtmeetodid 246.-

Standard on Euroopa standardi EN 60990:1999 "Methods of measurement of touch current and

"protective conductor current" ingliskeelse teksti identne tõlge eesti keelde.

Käesolev rahvusvaheline standard määratleb mõõtmeetodid

- alalisvoole ja siinuselisele või mittesiinusele vahelduvvoole, mis võib kulgeda läbi inimkeha,
- voolule, mis kulgeb läbi kaitsejuhi.

Mõõtmeetodid, mida soovitatatakse kasutada puutevoolu mõõtmiseks, põhinevad läbi inimkeha kulgeva voolu võimalikel toimetel. Standardis nimetatakse puutevoolu mõõtmiseks voolu mõõtmist läbi inimkeha närvitakistust (impedantsi) modelleerivate ahelate. Need ahelad ei pruugi sobida loomakehade modelleerimiseks.

Eri piirväärustele täpsem määramine ega sissetoomine ei kuulu käesoleva standardi käsituslasasse. Inimkeha läbiva voolu toime kohta annab teavet standard IEC 60479-1, mille alusel saab tuletada ka lubatavaid piirväärusi. Standard kehtib kõigi IEC 60536 järgi määratletud seadmeklasside kohta.

EVS-EN 61140:2006 (konsolideeritud tekst)

Kaitse elektrilöögi eest. Ühisnõuded paigaldistele ja seadmetele 268.-

Standard on Euroopa standardi EN 61140:2002 "Protection against electric shock - Common aspects for installation and equipment" ja selle augustis 2006 ilmunud muudatuse A1 ingliskeelse teksti identne tõlge eesti keelde.

Standard käitleb inimeste ja loomade kaitset elektrilöögi eest. Ta on ette nähtud selleks, et esitada põhiprintsiibid ja -nõuded, mis on ühised nii elektripaigaldistele kui ka -süsteemidele ja -seadmetele või on kasutatavad nende koordineerimiseks. Standard on koostatud igasuguse pingega elektripaigaldiste, -süsteemide ja -seadmete kohta.

EVS-EN 61140:2003/A1:2006

Kaitse elektrilöögi eest. Ühisnõuded paigaldistele ja seadmetele 95.-

Standardmuudatus on Euroopa standardi EN 61140:2002 "Protection against electric shock - Common aspects for installation and equipment" augustis 2006 ilmunud muudatuse A1 ingliskeelse teksti identne tõlge eesti keelde.

Standard käitleb inimeste ja loomade kaitset elektrilöögi eest. Ta on ette nähtud selleks, et esitada põhiprintsiibid ja -nõuded, mis on ühised nii elektripaigaldistele kui ka -süsteemide ja -seadmetele või on kasutatavad

nende koordineerimiseks. Standard on koostatud igasuguse pingega elektripaigaldiste, -süsteemide ja -seadmete kohta.

EVS-EN 60034-1:2006

Pöörlevad elektrimasinad. Osa 1:

Tunnussuurused ja talitusviisid 286.-

Standard on Euroopa standardi EN 60034-1:2004 "Rotating electrical machines - Part 1: Rating and performance" (IEC 60034-1:2004) ingliskeelse teksti identne tõlge eesti keelde. Standardi osa kehtib kõigi pöörlevate elektrimasinate kohta, väljaarvatult need, mida käsitlevad muud IEC standardid, nt IEC 60349.

Standardi käsitlusallasesse kuuluvate masinate kohta võib olla ka teisi publikatsioone, mis sisaldavad asendavaid, muutvaid või täiendavaid nõudeid, näiteks IEC 60079 ja IEC 60092.

Märkus. Kui standardi mõnda jaotist on muudetud, et arvestada erirakendusi, nt radioaktiivse kiirguse oludes või maailmaruumis talitlevaid masinaid, kehtivad nende kohta kõik muud sobivad jaotised.

EVS-EN 1993-1-8:2006

(sisaldb rahvuslikku lisa)

Eurokoodeks 3: Teraskonstruktsioonide projekteerimine. Osa 1-8: Liidete projekteerimine 343.-

Standard on Euroopa standardi EN 1993-1-8:2005 "Eurocode 3: Design of steel structures – Part 1-8: Design of joints" ingliskeelse teksti identne tõlge eesti keelde, sisaldades parandust AC:2005.

Standardi EN 1993 selles osas antakse reeglid põhiliselt staataliselt koormatud liidete arvutuseks teraseklasside S235, S275, S355 või S460 puhul.

EVS-EN 1993-1-9:2006

(sisaldb rahvuslikku lisa)

Eurokoodeks 3: Teraskonstruktsioonide projekteerimine. Osa 1-9: Väsimus 233.-

Standard on Euroopa standardi EN 1993-1-9:2005 "Eurocode 3: Design of steel structures – Part 1-9: Fatigue" ingliskeelse teksti identne tõlge eesti keelde, sisaldades parandust AC:2005.

Standard EN 1993-1-9 annab meetodid väsimuskoormusega koormatud konstruktsioonielementide, kinnituselementide ja liidete kandevõime hindamiseks.

EVS-EN 1995-1-2:2006

(sisaldb rahvuslikku lisa)

Eurokoodeks 5: Puitkonstruktsioonide projekteerimine. Osa 1-2: Üldist.

Tulepüsivusarvutus 286.-

Standard on Euroopa standardi EN 1995-1-2:2004 "Eurocode 5: Design of timber structures – Part 1-2: General – Structural fire design" ingliskeelse teksti identne tõlge eesti keelde, sisaldades parandust AC:2006.

EN 1995-1-2 käsitleb puitkonstruktsioonide projekteerimist erakorralise tulekahjuolukorra jaoks ja on ette nähtud kasutamiseks koos standarditega EN 1995-1-1 ja EN 1991-1-2. Standard selgitab ainult erinevusi ja täiendusi, mis on vajalikud tavalse temperatuuri-arvutusega võrreldes.

EVS-EN 1997-1:2006

(sisaldb rahvuslikku lisa)

Eurokoodeks 7: Geotehniline projekteerimine. Osa 1: Üldeeskirjad 358.-

Standard on Euroopa standardi EN 1997-1:2004 "Eurocode 7: Geotechnical design – Part 1: General rules" ingliskeelse teksti identne tõlge eesti keelde.

EN 1997 on mõeldud kasutamiseks koos standardiga EN 1990:2002, mis määrab ohutuse ja kasutuskõlblikkuse põhimõtted ning nõuded, kirjeldab projekteerimise ja kontrolli aluseid ja annab juhised konstruktsioonide töökindluse kohta.

EVS-EN 1993-1-2:2006

Eurokoodeks 3: Teraskonstruktsioonide projekteerimine. Osa 1-2: Üldeeskirjad. Tulepüsivusarvutus 286.-

Standard on Euroopa standardi EN 1993-1-2:2004 "Eurocode 3: Design of steel structures – Part 1-2: General rules – Structural fire design" ingliskeelse teksti identne tõlge eesti keelde.

Standardit EN 1993 kohaldatakse teraskonstruktsioonis hoonete ning tsiviilehitiste projekteerimisel.

Ta on kooskõlas standardi EN 1990 "Ehituskonstruktsioonide projekteerimise alused" põhimõtete ja nõuetega ehitiste turvalisuse ja kasutuskõlblikkuse, projekteerimise aluste ja valmistamise osas.

EN 1993 käsitleb ainult konstruktsioonide kandevõime, kasutuskõlblikkuse, kestvuse ja tulepüsivusega seotud nõudeid. Muid, näiteks soojus- ja heliisolatsiooni nõudeid siin ei käsitleta.

EVS-EN 1994-1-1:2006

Eurokoodeks 4: Terasest ja betoonist komposiitkonstruktsioonide projekteerimine. Osa 1-1: Üldreeglid ja reeglid hoonete projekteerimiseks 324.-

Standard on Euroopa standardi EN 1994-1-1:2004 "Eurocode 4: Design of composite steel and concrete structures – Part 1: General rules and rules for buildings" ingliskeelse teksti identne tõlge eesti keelde.

EN 1994-1-1 kirjeldab terasest ja betoonist komposiitkonstruktsioonide ohutuse, kasutuskõlblikkuse ja kestvuse põhimõtteid ning rakendusreegleid koos erisätetega hoonete kohta. Standard põhineb piirseisundite kontseptsioonil, mida kasutatakse koos osavarutegurite meetodiga. Uute ehitiste projekteerimisel on standard EN 1994-1-1 mõeldud kasutamiseks koos standardi EN 1994 muude osadega ja Eurokoodeksitega EN 1990 kuni 1993 ning EN 1997 ja 1998.

EVS-ISO 12917-1:2006

Toornafta ja vedelad naftatooted.

Horisontaalsete silindriliste mahutite

kalibreerimine. Osa 1: Kätsitsi

mõõtmeetodid 141.-

Standard on rahvusvahelise standardi ISO 12917-1:2002 "Petroleum and liquid petroleum products – Calibration of horizontal cylindrical tanks – Part 1: Manual methods" ingliskeelse teksti identne tõlge eesti keelde.

Standard määratleb kätsitsi mõõtmeetodid fikseeritud asukohta paigaldatud olemuselt horisontaalsete mahutite kalibreerimisel. Meetodid on kasutatavad kuni 4 m läbimõõdu ja 30 m pikkusega mahutite kalibreerimisel.

EVS-ISO 12917-2:2006

Toornafta ja vedelad naftatooted.

Horisontaalsete silindriliste mahutite

kalibreerimine. Osa 2: Elektro-optiline sisemiste kauguste mõõtmeetod 123.-

Standard on rahvusvahelise standardi ISO 12917-2:2002 "Petroleum and liquid petroleum products – Calibration of horizontal cylindrical tanks – Part 2: Internal electro-optical distance-ranging method" ingliskeelse teksti identne tõlge eesti keelde.

Standard määratleb üle kahe meetrise läbimõõduga horisontaalsete silindriliste mahutite kalibreerimismeetodi, mille korral mõõdetakse mahutit seestpoolt, kasutades elektro-optilist kauguse mõõteseadet ning mõõtmisele järgnevat mahuti mahutabeli

arvutust. Käesolev meetod on tuntud kui elektro-optiline kauguste mõõtmeetod (*electro-optical distance-ranging (EODR)*).

EVS-ISO 7507-1:2006

Toornafta ja vedelad naftatooted.

Vertikaalsete silindriliste mahutite

kalibreerimine. Osa 1: Mõõdulindimeetod

268.-

Käesolev Eesti standard on rahvusvahelise standardi ISO 7507-1:2003 "Petroleum and liquid petroleum products - Calibration of vertical cylindrical tanks - Part 1: Strapping method" ingliskeelse teksti identne tõlge eesti keelde.

Standard määratleb põhiosas vertikaalsete silindriliste mahutite kalibreerimismeetodi, mis toetub mahuti geometriliste parameetrite mõõdulindiga mõõtmisele.

EVS-ISO 7507-2:2006

Toornafta ja vedelad naftatooted.

Vertikaalsete silindriliste mahutite

kalibreerimine. Osa 2: Optilise tugijoone

meetod 171.-

Standard on rahvusvahelise standardi ISO 7507-2:2005 "Petroleum and liquid petroleum products - Calibration of vertical cylindrical tanks - Part 2: Opticalreference-line method" ingliskeelse teksti identne tõlge eesti keelde.

Standard määratleb põhiosas vertikaalsetest plaadiringidest koosneva, üle kaheksta meetrise läbimõõduga silindriliste mahutite kalibreerimismeetodi. Meetod võimaldab määrrata mahutis sisalduva vedeliku mahu mõõdetud vedelikunivoo kõrgusel.

EVS-ISO 7507-4:2006

Toornafta ja vedelad naftatooted.

Vertikaalsete silindriliste mahutite

kalibreerimine. Osa 4: Elektro-optiline sisemiste kauguste mõõtmeetod 113.-

Standard on rahvusvahelise standardi ISO 7507-4:1995 "Petroleum and liquid petroleum products - Calibration of vertical cylindrical tanks - Part 4: Internal electro-optical distance-ranging methods" ingliskeelse teksti identne tõlge eesti keelde. Standard määratleb üle viie meetrise läbimõõduga vertikaalsete silindriliste mahutite kalibreerimismeetodi, mille korral mõõdetakse mahutit seestpoolt, kasutades elektro-optilist kauguse mõõteseadet. See meetod on tuntud kui elektro-optiline sisemiste kauguste mõõtmeetod (*electro-optical distanceranging (EODR)*).

EVS-ISO 7507-5:2006

Toornafta ja vedelad naftatooted. Vertikaalsete silindriliste mahutite kalibreerimine. Osa 5: Elektro-optiline välimiste kauguste mõõtmeetod
(ISO 7507:2000) 113.-

Standard on rahvusvahelise standardi ISO 7507-5:2000 “Petroleum and liquid petroleum products . Calibration of vertical cylindrical tanks - Part 5: External electro-optical distance-ranging method” ingliskeelse teksti identne tõlge eesti keelde.

Standard määratleb soojustuseta ning üle viie meetrise läbimõõduga vertikaalsete silindriliste mahutite kalibreerimise meetodi, mille korral mõõdetakse mahutit väljastpoolt, kasutades elektro-optilist kauguse mõõtmise (*electro-optical distance-ranging* (EODR)) meetodit, samuti käitleb standard mahuti mahutabeli loomist. Standard on kasutatav nii ülespoole kui allapoole suunatud põhjakoonusega mahutite korral kui ka tasapinnalise põhjaga mahutite korral.

EVS-EN 13775-1:2006

Raudteealased rakendused. Uute ja moderniseeritud kaubavagunite mõõtmine. Osa 1: Mõõtmispõhimõtted 104.-

Standard on Euroopa standardi EN 13775-1:2003 “Railway applications - Measuring of new and modified freight wagons - Part 1: Measuring principles” ingliskeelse teksti identne tõlge eesti keelde.

Standard määratleb nõuded kaubavagunite ja pöördvankrite mõõtmisele. See tagab mõõtemeetodite rakendamise vastavalt ühtsetele kriteeriumidele. Standard kehtib uutele ja moderniseeritud kaubavagunitele ning pöördvankritele. Käesolevate nõuete käsituslast väljapoole jäavad sätted tuleb kokku leppida ajassepuituvate lepingupartnerite vahel.

Mõõtemeetodid on seotud lisavarustusega või ilma lisavarustuseta tervikliku alusraami või selle osadega, kui geomeetriline konstruktsioon muud ei võimalda. Vajadusel tuleb kasutada muid, siin määratlemata mõõtemeetodeid, mis tuleb igal konkreetsel juhul eraldi kindlaks määrata. See kehtib vajaduse korral pöördvankritele.

EVS-EN 13775-2:2006

Raudteealased rakendused. Uute ja moderniseeritud kaubavagunite mõõtmine. Osa 2: Pöördvankritega kaubavagunid 180.-

Standard on Euroopa standardi EN 13775-2:2003 “Railway applications - Measuring of new and modified freight wagons - Part 2: Freight wagons with bogies” ingliskeelse teksti identne tõlge eesti keelde.

Standard määratleb nõuded pöördvankritega kaubavagunite mõõtmisele ja tagab mõõteprotseduuride rakendamise vastavalt ühtsetele kriteeriumidele. See kehtib uutele ja moderniseeritud pöördvankritega kaubavagunitele. Käesolevate nõuete käsituslast väljapoole jäavad sätted tuleb kokku leppida ajassepuituvate lepingupartnerite vahel.

Mõõteprotseduurid on seotud lisaseadmetega või lisaseadmete puudumisel tervikliku alusraami või selle osadega, kui geomeetriline konstruktsioon muud ei võimalda.

Vajadusel tuleb kasutada muid, siin määratlemata mõõtemeetodeid, mis tuleb igal konkreetsel juhul eraldi kindlaks määrata. See kehtib vajaduse korral pöördvankritele.

EVS-EN 13775-4:2006

Raudteealased rakendused. Uute ja moderniseeritud kaubavagunite mõõtmine. Osa 4: Kaheteljelised pöördvankrid 190.-

Standard on Euroopa standardi EN 13775-4:2004 “Railway applications - Measuring of new and modified freight wagons - Part 4: Bogies with 2 wheelsets” ingliskeelse teksti identne tõlge eesti keelde.

Standard määratleb kaheteljeliste pöördvankrite mõõtmise põhimõtted ja -nõuded. See tagab mõõteprotseduuride rakendamise vastavalt ühtsetele kriteeriumidele. Standard kehtib uutele ja moderniseeritud kaheteljelistele pöördvankritele. Käesolevate nõuete käsituslast väljapoole jäavad sätted lepitakse tavaliselt kokku ajassepuituvate lepingupartnerite vahel. Mõõteprotseduurid on seotud lisaseadmetega või lisaseadmeteta tervikliku pöördvankri või selle osaga, kui geomeetriline konstruktsioon muud ei võimalda. Vajadusel tuleb kasutada muid, siin määratlemata mõõteprotseduure, mis tuleb igal konkreetsel juhul eraldi kindlaks määrata.

EVS-EN 14363:2006

Raudteealased rakendused. Raudteeveeremi sõiduomadustesse heaksikiidukatsetused.

Sõidu- ja seisukatsetused 324.-

Standard on Euroopa standardi EN 14363:2005 “Railway applications - Testing for the

acceptance of running characteristics of railway vehicles - Testing of running behaviour and stationary tests” ingliskeelse teksti identne tõlge eesti keelde. Standard reguleerib raudteeveeremi sõiduomaduste heaksikiukatsetuste korraldamist. Sõiduomaduste katsetamist rakendatakse põhimõtteliselt kõigi ühistranspordiveeremite puhul, mida kasutatakse piiranguteta standardsetel rõöbastel (1 435 mm).

EVS-EN 14478:2006

Raudteealased rakendused. Pidurdamine. Üldsõnavara 381.-

Standard on Euroopa standardi EN 14478:2005 “Railway applications – Braking – Generic vocabulary” ingliskeelse teksti identne tõlge eesti keelde.

Standard määratleb raudtee veeremi pidurite ja pidurduse valdkonnas kasutatavate tavaterminate tähenduse. Standard sisaldab mõningaid termineid, kus süsteemide või nende osade põhiülesanne ei ole pidurdamine. Välja on jäetud rongis mitte asuvad süsteemid, allsüsteemid ja nende osad.

EVS-EN 50121-4:2006

Raudteealased rakendused. Elektromagnetiline ühilduvus. Osa 4: Signaalatsiooni- ja sideseadmete emissioon ja häiringukindlus 113.-

Standard on Euroopa standardi EN 50121-4:2006 “Railway applications – Electromagnetic compatibility - Part 4: Emission and immunity of the signalling and telecommunications apparatus” ingliskeelse teksti identne tõlge eesti keelde.

Standard laieneb raudteekeskkonda paigaldatud signaalatsiooni- ja sideseadmetele. Veeremisse paigaldatud signaalatsiooni- ja sideseadmeid käsitletakse standardis EN 50121-3-2. Standardiga määratletakse emissiooni ja häiringukindluse piirväärtused ja näidatakse ära jõudluskriteeriumid signaalatsiooni ja side (S&T) seadmetele, mis võivad tekitada häireid teiste raudteeveskkonna seadmete töös või suurendada raudteeveskkonna koguemissiooni vastavas standardis sätestatud määrist kõrgemale, põhjustades seega elektromagnetiliste häirete (*Electro-Magnetic Interference, EMI*) riski väljaspool raudteesüsteemi asuvatele seadmetele.

EVS-EN 50125-1:2006

Raudteealased rakendused.

Keskkonnatingimused seadmetele. Osa 1: Veeremil paiknevad seadmed 141.-

Standard on Euroopa standardi EN 50125-1:1999 “Railway applications - Environmental conditions for equipment - Part 1: Equipment on board rolling stock” ingliskeelse teksti identne tõlge eesti keelde.

Standardi eesmärgiks on Euroopa keskkonnatingimuste määratlemine. Märkus. Kokkuleppel on standardi kohaldamine lubatud ka mujal. Antud standardi käsitlusala hõlmab järgmisi veeremil asetsevate elektriliste, elektromehaaniliste ja elektrooniliste seadmete kasutamist mõjutavaid parameetreid: kõrgus, temperatuur, õhuniiskus, õhu liikumine, vihm, lumi ja rahe, jäät, pääkesekiirgus, välik, saaste, vibratsioon ja lõögid, elektromagnetiliste häirete keskkond, akustiline mürakeskkond, toitesüsteemide omadused.

EVS-EN 50125-3:2006

Raudteealased rakendused.

Keskkonnatingimused seadmetele. Osa 3: Signaalatsiooni- ja telekommunikatsiooniseadmed 180.-

Standard on Euroopa standardi EN 50125-3:2003 “Railway applications - Environmental conditions for equipment - Part 3: Equipment for signalling and telecommunications” ingliskeelse teksti identne tõlge eesti keelde.

Standardiga määratletakse Euroopas esinevaid keskkonnatingimusi. Tarnija ja kliendi vahelisel kokkuleppel võib standardit kasutada ka mujal. Käesoleva standardi käsitlusala hõlmab seadmete omadusi ja kasutamist ning mis tahes kantavaid signaaliseerimis- ja telekommunikatsioonisüsteemide seadmeid (sh katse-, mõõte-, jälgimisseadmeid jne).

EVS-EN 50171:2006

Tsentraalsed toitesüsteemid 151.-

Standard on Euroopa standardi EN 50171:2001 “Central power supply systems” ingliskeelse teksti ja trükivigade paranduse AC:2001 identne tõlge eesti keelde.

Euroopa standard määrab kindlaks oluliste ohutusseadmete autonoomset toidet tagavatele tsentraalsetele toitesüsteemidele esitatavad üldnõuded. Käesolev standard käitleb 1000 V piires toimivaid vahelduvtoiteallikatega ühendatud süsteeme, mis kasutavad reservtoiteallikatena akusid.

EVS-EN 50272-2:2006

Ohutusnõuded tagavaraakudele ja akupaigaldistele. Osa 2: Statsionaarsed akud 199.-

Standard on Euroopa standardi EN 50272-2:2001 "Safety requirements for secondary batteries and battery installations – Part 2: Stationary batteries" inglise keelse teksti identne tõlge eesti keelde.

Euroopa standard kehtib statsionaarsetele tagavaraakudele maksimaalse alalispingega 1500 V (nimipinge) ja kirjeldab põhimeetmeid kaitseks ohtude vastu, mis on põhjustatud:

- elektrivoolust,
- gaasi eraldumisest,
- elektrolüüdist.

Standard sätestab ohutusnõudeid, mis liituvad koostamise, kasutamise, kontrollimise, hooldamise ja kasutusest kõrvaldamisega. Standard hõlmab plii akusid ja nikkelkaadmium akusid.

EVS-ISO/IEC 12207:1998/A2:2006

Infotehnoloogia. Tarkvara elutsükli protsessid 84.-

Standardi muudatus on rahvusvahelise standardi ISO/IEC 12207:1995 "Information technology . Software life cycle processes" muudatuse A2:2004 ingliskeelse teksti identne tõlge eesti keelde.

Standard määrab tarkvaraprotsessi ühise arhitektuuri tarkvara hankimisele, tarnimisele, väljatöötamisele, ekspluatatsioonile ja hooldusele

EVS-ISO/IEC TR 9294:2006

Infotehnoloogia. Tarkvara dokumentatsiooni halduse suunised 123.-

Standard on r ISO/IEC TR 9294:2005 . "Information technology - Guidelines for the management of software documentation" ingliskeelse teksti identne tõlge eesti keelde.

Tehniline aruanne (TR) pakub suuniseid tarkvara dokumentatsiooni halduse kohta neile juhtidele, kes vastutavad tarkvara või tarkvarapõhiste toodete valmistuse eest. Need suunised on mõeldud aitama juhtidel tagada, et nende organisatsioonis luuakse toimiv dokumentatsioon. TR käsitleb poliitikaid, standardeid, protseduure, ressursse ja plaane, mille eest juhtidel tuleb hoolitseda tarkvara dokumentatsiooni toimivaks halduseks.

EVS-ISO/IEC 27001:2006

Infotehnoloogia. Turbemeetodid. Infoturbe halduse süsteemid. Nõuded 208.-

Standard sisaldb rahvusvahelise standardi ISO/IEC 27001:2005 . "Information technology . Security techniques - Information security management systems - Requirements" ingliskeelse teksti identne tõlge eesti keelde.

Standard hõlmab igat tüüpi organisatsioone (näiteks äriettevõteid, riigiasutusi, mittetulundusühinguid). See standard spetsifitseerib nõuded dokumenteeritud IT HS rajamiseks, evituseks, rakendamiseks, seireks, läbivaatuseks, hoolduseks ja täiustamiseks organisatsiooni üldiste tegevusriskide kontekstis. Ta spetsifitseerib nõuded individuaalse organisatsiooni või ta osade vajadustele kohandatud turvameetmete evitusele. IT HS on kavandatud tagama adekvaatsete ja õiges suhtes turvameetmete valimist, nii et need kaitseksid infovarasid ja tekitaksid huvipoole usaldust.

EVS-ISO/TR 13569:2006

Rahandusteenused. Infoturbe suunised 286.-

Standard on tehnilise aruande ISO/IEC TR 13569:2005 "Financial services - Information security guidelines" ingliskeelse teksti identne tõlge eesti keelde.

Tehniline aruanne annab rahandusasutustele suuniseid infoturbekava väljatöötamiseks. Ta sisaldb sellise kava poliitikate, organisatsiooni ning struktuuriliste, õiguslike ja regulatiivsete komponentide käsitluse. Vaadeldakse turvameetmete ning nüüdisaegses rahandusasutuses infoturberiski halduseks vajalike elementide valimise ja teostuse kaalutlusi. Antakse soovitusi, mis põhinevad asutuse ärikeskkonna, tavade ja protseduuride arvestamisel. Nendes juhistes käsitletakse ka õiguslike ja regulatiivsetele nõuetele vastavuse küsimusi, mida tuleks arvestada kava koostamisel ja elluviimisel.

EVS-ISO 19005-1:2006

Informatsioon ja dokumentatsioon. Dokumendi haldus. Digidokumenti pikaajalise säilitamise vorming. Osa 1: PDF 1.4 (PDF/A-1) kasutamine 361.-

Standard on rahvusvahelise standardi ISO 19005-1:2005 "Information and documentation – Document management – Electronic document file format for long-term preservation – Part 1: Use of PDF 1.4 (PDF/A-1)" ingliskeelse teksti tõlge eesti keelde.

Standard täpsustab, kuidas kasutada Portable Document Format (PDF) 1.4 digidokumentide pikaajaliseks säilitamiseks. See on rakendatav

dokumentidele, mis sisaldavad tähemärke, raster- ja vektorandmeid.

EVS-EN 1991-1-6:2006 (sisaldbat rahvuslikku lisa)

Eurokoodeks 1: Ehituskonstruktsioonide koormused. Osa 1-6: Üldkoormused.

Ehitusaegsed koormused 233.-

Standard on Euroopa standardi EN 1991-1-6:2005 "Eurocode 1: Actions on structures – Part 1-6: General actions – Action during execution" ingliskeelse teksti identne tõlge eesti keelde.

Standardis antakse hoonete ja rajatiste ehitusaegsete koormuste määramise põhimõtted ja üldreeglid. Standardi EN 1991 osa võib kasutada juhendmaterjalina eri tüüpi ehitusobjektide koormuste hindamiseks, kaasa arvatud ehitiste konstruktivsete muutuste nagu renoveerimise ja osalise või täieliku lammutamise puhul. Lisareegleid ja -juhiseid on antud lisades A1, A2 ja B. Standard ei käsitele ehitusplatsil või selle läheduses olevate inimeste turvalisusnõudeid. Need võib määratleda konkreetse individuaalprojekti jaoks eraldi.

EVS-EN 1993-1-10:2006

(sisaldbat rahvuslikku lisa)

Eurokoodeks 3: Teraskonstruktsioonide projekteerimine. Osa 1-10: Materjali sitkus ja paksusesuunalised omadused 171.-

Standard on Euroopa standardi EN 1993-1-10:2005 "Eurocode 3: Design of steel structures – Part 1-10: Material toughness and trough-thickness properties" ingliskeelse teksti identne tõlge eesti keelde, sisaldades parandust AC:2005.

Standardis antakse juhiseid keevitatud konstruktsioonielementide terase valikuks purunemissitkuse ja paksusesuunaliste omaduste seisukohalt, kui valmistamise ajal on märkimisväärne kihtmurdumise oht.

EVS-EN 1993-1-1:2006

(sisaldbat rahvuslikku lisa)

Eurokoodeks 3: Teraskonstruktsioonide projekteerimine. Osa 1-1: Üldreeglid ja reeglid hoonete projekteerimiseks 324.-

Standard on Euroopa standardi EN 1993-1-1:2005 "Eurocode 3: Design of steel structures – Part 1-1: General rules and rules for buildings" ingliskeelse teksti identne tõlge eesti keelde, sisaldades parandusi AC:2005 ja AC:2006.

Eurokoodeks 3 kohaldatakse teraskonstruktsioonis hoonete ning tsiviilehitiste projekteerimisel. Ta on kooskõlas EN 1990 "Ehituskonstruktsioonide projekteerimise alused" põhimõttete ja nõuetega ehitiste turvalisuse ja kasutuskõlblikkuse, projekteerimise aluste ja valmistamise osas.

Odas 1-1 antakse eeskirju teraskonstruktsioonide projekteerimiseks, mille materjali paksus $t \geq 3$ mm. Antakse ka lisandöudeid hoonete teraskonstruktsioonide projekteerimiseks.

EVS-EN 927-1:2006

Värvid ja lakid. Välistingimustes kasutatava puidu kattematerjalid ja -süsteemid. Osa 1: Liigitus ja valik 113.-

Standard on Euroopa standardi EN 927-1:1996 "Paints and varnishes – Coating materials and coating systems for exterior wood – Part 1: Classification and selection" ingliskeelse teksti tõlge eesti keelde.

Standard määratleb välisoludes paiknevate puitpindade pinnakattevahendite ja -süsteemide liitutuse kasutusviisi, välimuse ja ilmastiku mõju põhjal. Standardit saab rakendada kõigi pinnakattevahendite ja -süsteemide korral, mis on ette nähtud välisoludes paiknevate puitpindade kaunistamiseks ja kaitseks, k.a need, mis sisaldavad pinnakattekihi ja kokkupuutepinna kaitseks biokaitsekomponente. Pinnakattevahendid võivad sisaldada bioaktiivseid koostisosid vedela pinnakattevahendi kaitseks, nt säilitamise kestel (värvimahutis). Standardit ei kohalda puiduimmatusvedelikele. Lisateabena on lisas A suunised valikukriteeriumite kohta ja valikujuhised tarbijale.

EVS-EN ISO 2808:2006

Värvid ja lakid. Kihi paksuse määramine 190.-

Standard on Euroopa standardi EN ISO 2808:1999 "Paints and varnishes - Determination of film thickness" ingliskeelse teksti tõlge eesti keelde.

Standard vaatleb ja kirjeldab mitut meetodit, mis sobivad aluspinnale kantud orgaaniliste pinnakattevahendite kihipaksuse mõõtmiseks. Standard ei kehti metallkatetele. Osa kirjeldatud võtetest on kohandatavad pinnalt eemaldatud pinnakattekihi paksuse mõõtmiseks. Meetodite tööpõhimõte, kasutusvaldkond ja eeldatav täpsus on

loetletud tabelis 1. Standard määratleb ka kihipaksuse määramist puudutavad terminid.

EVS-EN ISO 11890-2:2006

Värvid ja lakkid. Lenduvate orgaaniliste ühendite (VOC) sisalduse määramine. Osa 2: Gaaskromatograafiline meetod 151.-

Standard on Euroopa standardi EN ISO 11890-2:2001 "Paints and varnishes – Determination of volatile organic compound (VOC) content – Part 2: Gas-chromatographic method" ingliskeelse teksti tõlge eesti keelde.

Standardi on esimene mitmest standardist värvide, lakkide ja nendega seotud toodete proovide võtmise ja uurimise kohta. Standard määratleb meetodi lenduvate orgaaniliste ühendite (VOC) sisalduse määramiseks värvides, lakkides ja nende lähtematerjalides. Käesolev osa on mõeldud kasutamiseks juhul, kui eeldatav VOC sisaldus on suurem kui 0,1 massiprotsenti ja väiksem kui 15 massiprotsenti. Kui VOC sisaldus on suurem kui 15 massiprotsenti, võib kasutada standardis ISO 11890-1 kirjeldatud lihtsamat meetodit. Meetod eeldab, et lenduv aine on kas vesi või orgaaniline aine. Materjalis võib aga leiduda ka muid lenduvaid anorgaanilisi ühendeid, vajadusel tuleb nende sisaldus määrata teise sobiva meetodi abil ja seda sisaldust arvutustes arvestada.

EVS-ISO 4225:2006

Õhu kvaliteet. Üldosa. Sõnastik 132.-

Käesolev Eesti standard on rahvusvahelise standardi ISO 4225:1994 "Air quality - General aspects - Vocabulary" ingliskeelse teksti tõlge eesti keelde.

Standard selgitab eesti keeles valiku õhukvaliteedi kontrollimisega seotud gaaside, aurude ja tahkete osakete proovivõtu- ja mõõtmeetodite juures sageli kasutatavate terminite tähetundi. Terminid on esitatud inglise terminite tähestikjärjestuses. Standard sisaldb ka prantsuse terminite tähestikregistrit.

EVS-ISO 7935:2006

Paiksete saasteallikate heited.

Vääveldioksiidi massikontsentratsiooni määramine. Automaatmõõtmeetodite suutlikkusnäitajad 123.-

Standard on rahvusvahelise standardi ISO 7935:1992 "Stationary source emissions - Determination of the mass concentration of sulfur dioxide - Performance characteristics of

"automated measuring methods" ingliskeelse teksti tõlget eesti keelde.

Standard kehtestab paiksete allikate heidetes vääveldioksiidi massikontsentratsiooni pidevaks mõõtmiseks mõeldud automaatmõõtesüsteemide (AMS) suutlikkunäitajate kõik väärused.

EVS-ISO 10396:2006

Paiksete saasteallikate heited. Proovivõtt gaasikontsentratsioonide automaatseks määramiseks 132.-

Standard on rahvusvahelise standardi ISO 10396:1993 "Stationary source emissions - Sampling for the automated determination of gas concentrations" ingliskeelse teksti tõlge eesti keelde.

Standard määratleb töövõtted ja -vahendid, mis võimaldavad teatud piirides saada esinduslike proove gaasikontsentratsioonide automaatseks määramiseks gaasilistes heitvooludes. Standardi rakendusala piirdub hapniku (O₂), süsinikdioksiidi (CO₂), süsinikmonooksiidi (CO), vääveldioksiidi (SO₂), lämmastikmonooksiidi (NO) ja lämmastikdioksiidi määramisega (NO₂). Ehkki standard käsitleb voolukiiruse mõõtmisi ainult lühidalt, on gaaside mahtkulu määramiseks vaja põhjalikumaid voolukiiruse mõõtmisi.

EVS-ISO 10780:2006

Paiksete saasteallikate heited. Gaasi voolukiiruse ja mahtkiiruse määramine gaasikäikudes 162.-

Standard on rahvusvahelise standardi ISO 10780:1994 "Stationary source emissions - Measurement of velocity and volume flow rate of gas streams in ducts" ingliskeelse teksti tõlge eesti keelde.

Standard määratleb meetodid atmosfääri suunatava gaasi voolukiiruse ja mahtkiiruse määramiseks korstnates, .ahtides ja torudes. Standard määratleb L- ja S-tüüpi Pitot' torude kasutamise gaasi voolukiiruse ja mahtkiiruse määramiseks ning soovituslikud mõõte-tingimused, mille juures kumbagi tüüpi Pitot' toru eelistada.

EVS-ISO 10849:2006

Paiksete saasteallikate heited.

Lämmastikoksidide massikontsentratsiooni määramine. Automaatmõõtesüsteemi suutlikkusnäitajad 180.-

Standard on rahvusvahelise standardi ISO 10849:1996 "Stationary source emissions -

Determination of the mass concentration of nitrogen oxides - Performance characteristics of automated measuring systems" ingliskeelse teksti tõlget eesti keelde.

Standardiga täpsustatakse paiksete saasteallikate (nt põletusseadmete) juures kasutatavate lämmastikoksiidide automaatmõõtesüsteemi (AMS-i) põhikonstruktsiooni ja peamisi suutlikkuskäitajaid. Samuti kirjeldatakse võtteid suutlikkuskäitajate määramiseks. Lisaks kirjeldatakse meetodeid ja seadmeid NO või NOx (NO + NO₂) määramiseks suitsugaasides, sh proovi-võtusüsteemi ja proovigaasi tasakaalustussüsteemi. Dilämmastikoksiidi (N₂O) käesolevas standardis kirjeldatud meetoditega määratada ei saa. Toodud suutlikkuskäitajad kehtivad kogu mõõtesüsteemi kohta proovivõtuseadimest analüsaatorini.

EVS-ISO 12039:2006

Paiksete saasteallikate heited.

Süslinikmonoksiidi, süsinikdioksiidi ja hapniku määramine.

Automaatmõõtesüsteemi suutlikkuskäitajad ja kalibreerimine 141.-

Standard on rahvusvahelise standardi ISO 12039:2001 "Stationary source emissions - Determination of carbon monoxide, carbon dioxide and oxygen - Performance characteristics and calibration of automated measuring systems" ingliskeelse teksti tõlget eesti keelde.

Standard määratleb meetodid, peamised suutlikkuskäitajad ja automaatmõõteseadmete (AMS-ide) kalibreerimise süsinikdioksiidi, süsinikmonooksiidi ja hapniku määramisel paiksete saasteallikate suitsugaasides.

EVS-ISO 14164:2006

Paiksete saasteallikate heited. Gaasi mahtkiiruse määramine gaasikäikudes. Automaatmeetod 123.-

Standard on rahvusvahelise standardi ISO 14164:1999 "Stationary source emissions - Determination of the volume flowrate of gas streams in ducts - Automated method" ingliskeelse teksti tõlge eesti keelde.

Standard kirjeldab paiksete saasteallikate gaasikäikudes mahtkiiruse mõõtmiseks mõeldud automaatvoolumõõtesüsteemide (AMS-ide) tööpõhimõtteid ja peamisi suutlikkuskäitajaid. Samuti kirjeldatakse standardis AMS-ide suutlikkuskäitajate

määramist. Suutlikkuskäitajad on üldised ja ei kehti ainult kindla määramispõhimõtte või - süsteemi puhul.

Märkus. Kirjeldatud põhimõttel töötavad ja käesoleva standardi nõuetele vastavad süsteemid on kaubanduslikult kättesaadavad.

EVS/TS 1992-1-2:2006

(tehniline spetsifikatsioon)

Betoonkonstruktsioonid. Osa 1-2:

Tulepüsivusarvutus 268.-

Tehniline spetsifikatsioon käsitleb betoonkonstruktsioonide arvutamist tulekahjukoormustega ja kasutada tuleb seda koos EVS 1992-1-1 ja EVS-EN 1991-1-2-ga. Dokument esitab täiendusi ja erinevusi konstruktsioonide arvutamisest normaaltemperatuuril. Osa 1-2 käsitleb ainult passiivseid konstruktsioonilisi (ehituslikke) tulekaitsemeetodeid. Aktiivseid tulekaitsemeetodeid ei käsitleta.

EVS/TS 1993-3-1:2006

(tehniline spetsifikatsioon)

Teraskonstruktsioonid. Tornid, mastid ja korstnad. Osa 3-1: Tornid ja mastid 286.-

EVS/TS 1993-3-1 on ette nähtud nii vabalt seisvate sõrestikmästide (tornide) kui ka vantidega toetatud mastide projekteerimiseks. Vabalt seisvate ja vantidega toetatud silindriliste konstruktsioonide (korstnate) projekteerimise eeskirjad on antud Euroopa eelstandardis ENV 1993-3-2. Tugivantide projekteerimiseeskirjad on esitatud käesolevas dokumendis.

EVS-EN 1991-1-4:2006

(ilmra rahvusliku lisata)

Eurokoodeks 1: Ehituskonstruktsioonide koormused. Osa 1-4: Üldkoormused.

Tuulekoormus 324.-

Standard on Euroopa standardi EN 1991-1-4:2005 "Eurocode 1: Actions on structures – Part 1-4: General actions – Wind actions" ingliskeelse teksti identne tõlge eesti keelde.

Standard annab juhisid loodusliku tuule mõju määramiseks hoonete ja rajatiste projekteerimisel iga käsitletava koormatud piirkonna jaoks. Käsitlus hõlmab ehitist tervikuna või ehitise osi nagu konstruktsioonielementid, välisvoodridetailid ja nende kinnitused, kaitsepiirded ja mürabarjäärid.

EVS-EN 437:2006**Katsetamisgaasid. Proovirõhud. Tarvitite kategooriad 208.-**

Standard on Euroopa standardi EN "Test gases - Test pressures - Appliance categories" ingliskeelse teksti identne tõlge eesti keelde.

Standard kirjeldab katsetamisgaase, proovirõhkusid ja tarvitite kategooriaid vastavalt esimese, teise ja kolmanda perekonna

gaaside kasutamisel. Standard annab võimaluse viideteks konkreetsete gaasitarvitite standardites, mis kuuluvad liikmesmaade seaduste ühtlustamiseks nõukogu direktiivis (90/396/EÜ) toodud gaasitarvitite määratluse alla.

Standard annab soovitusi gaaside ja rõhkude kasutamiseks katsetamistel. Kogu protseduur esitatakse vastavates tarvitite standardites
